

TREC (Text REtrieval Conference)

- Initiated under the National Institute of Standards and Technology(NIST)
- Goals:
 - ◆ Providing a large test collection
 - ◆ Uniform scoring procedures
 - ◆ Forum
- 1st TREC conference in 1992
- 7th TREC conference in 1998
 - ◆ Document collection: test collections, example information requests (topics), relevant docs
 - ◆ The benchmarks tasks

Evaluation has always played a major role in information retrieval with the early pioneers such as Cyril Cleverdon and Gerard Salton laying the foundations for most of the evaluation methodologies in use today The retrieval community has been extremely fortunate to have such a well grounded evaluation paradigm during a period when most of the human language technologies were just developing This lecture has the goal of explaining where these evaluation methodologies came from and how they have continued to adapt to the vastly changed environment in the search engine world today The lecture starts with a discussion of the early evaluation of information retrieval systems starting with the Cranfield testing in the early 1960s continuing with the Lancaster user study for MEDLARS and presenting the various test collection investigations by the SMART project and by groups in Britain The emphasis in this chapter is on the how and the why of the various methodologies developed The second chapter covers the more recent batch evaluations examining the methodologies used in the various open evaluation campaigns such as TREC NTCIR emphasis on Asian languages CLEF emphasis on European languages INEX emphasis on semi structured data etc Here again the focus is on the how and why and in particular on the evolving of the older evaluation methodologies to handle new information access techniques This includes how the test collection techniques were modified and how the metrics were changed to better reflect operational environments The final chapters look at evaluation issues in user studies the interactive part of information retrieval including a look at the search log studies mainly done by the commercial search engines Here the goal is to show via case studies how the high level issues of experimental design affect the final evaluations Table of Contents Introduction and Early History Batch Evaluation Since 1992 Interactive Evaluation Conclusion *Accessing Multilingual Information Repositories* Cross-Language Evaluation Forum.

and evaluation issues **Natural Language Information Retrieval** T. Strzalkowski, 2013-04-17 The last decade has been one of dramatic progress in the field of Natural Language Processing NLP This hitherto largely academic discipline has found itself at the center of an information revolution ushered in by the Internet age as demand for human computer communication and information access has exploded Emerging applications in computer assisted information production and dissemination automated understanding of news understanding of spoken language and processing of foreign languages have given impetus to research that resulted in a new generation of robust tools systems and commercial products Well positioned government research funding particularly in the U S has helped to advance the state of the art at an unprecedented pace in no small measure thanks to the rigorous 1 evaluations This volume focuses on the use of Natural Language Processing in Information Retrieval IR an area of science and technology that deals with cataloging categorization classification and search of large amounts of information particularly in textual form An outcome of an information retrieval process is usually a set of documents containing information on a given topic and may consist of newspaper like articles memos reports of any kind entire books as well as annotated image and sound files Since we assume that the information is primarily encoded as text IR is also a natural language processing problem in order to decide if a document is relevant to a given information need one needs to be able to understand its content The Turn Peter Ingwersen, Kalervo Järvelin, 2005-08-24 The Turn analyzes the research of information seeking and retrieval IS search and works tasks and situations in context interaction between humans and machines information acquisition relevance and information use research design and methodology based on a structured set of explicit variables all set into the holistic cognitive approach The present monograph invites the reader into a construction project there is much research to do for a contextual understanding of IS R The Turn represents a wide ranging perspective of IS R by providing a novel unique research framework covering both individual and social aspects of information behavior including the generation searching retrieval and use of information Regarding traditional laboratory information retrieval research the monograph proposes the extension of research toward actors search and work tasks IR interaction and utility of information Regarding traditional information seeking research it proposes the extension toward information access technology and work task contexts The Turn is the first synthesis of research in the broad area of IS R ranging from systems oriented laboratory IR research to social science oriented information seeking studies *Information Retrieval Systems* Gerald J. Kowalski, 2007-08-23 The growth of the Internet and the availability of enormous volumes of data in digital form have necessitated intense interest in techniques to assist the user in locating data of interest The Internet has over 350 million pages of data and is expected to reach over one billion pages by the year 2000 Buried on the Internet are both valuable nuggets to answer questions as well as a large quantity of information the average person does not care about The Digital Library effort is also progressing with the goal of migrating from the traditional book environment to a digital library environment The challenge to both authors of new

publications that will reside on this information domain and developers of systems to locate information is to provide the information and capabilities to sort out the non relevant items from those desired by the consumer In effect as we proceed down this path it will be the computer that determines what we see versus the human being The days of going to a library and browsing the new book shelf are being replaced by electronic searching the Internet or the library catalogs Whatever the search engines return will constrain our knowledge of what information is available An understanding of Information Retrieval Systems puts this new environment into perspective for both the creator of documents and the consumer trying to locate information

The Adaptive Web Peter Brusilovski, Alfred Kobsa, Wolfgang Nejdl, 2007-04-24 This state of the art survey provides a systematic overview of the ideas and techniques of the adaptive Web and serves as a central source of information for researchers practitioners and students The volume constitutes a comprehensive and carefully planned collection of chapters that map out the most important areas of the adaptive Web each solicited from the experts and leaders in the field
