Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1919 edition Excerpt perpendicular to the work In welding the torch should not be directed upon a particular spot for any great length of time but should move slightly so that the flame will come in contact with other parts in the immediate vicinity This should not be understood to mean that the torch should sweep a circle whose diameter is one or two inches Most beginners make this mistake The torch should be moved not more than 1/4 or 5/16 of an inch at a time for average work say 1/2 in thickness A circular motion for metal of this thickness is not essential but it is well to acquire it For sheet metal work this circular movement is very desirable producing a very smooth and pretty weld However there are some that prefer an oscillatory movement the torch being pushed like a pendulum from one side of the sheet to the other while advancing in a forward direction So far we have not referred to the welding rod It should be held in the free hand Instead of using a straight rod it will be found more convenient for the welder to use a rod having an angle of 90 degrees In steel this is formed by simply bending over 3 or 4 inches of the end and continuing to do this as the rod is used up For cast iron we hold the end of one rod in the middle of another and tack the two with the torch The size of the welding rod is important and should be proportional to the thickness of the metal welded Most beginners make the fatal mistake of not getting the metal to be welded hot enough before adding the filler rod It is a good plan in beginning a weld to forget that you have a filler rod Get the casting hot and then start the metal to flowing together at the bottom of the bevel Not until then should the filler be used The **PRACTICAL MANUAL OF OXY-ACETYLENE WELDING AND CUTTING** P. F. Willis, 2017-12 Excerpt from A Practical Manual of Oxy Acetylene Welding and Cutting With a Treatise on Acetylene and Oxygen Some ten years ago the author started a welding shop using the oxy acetylene process He hardly knew how to light the torch much less its operation In this respect he was on an equal footing with a few other venturesome individuals in this country who had embarked in the same business regarding which practically nothing was known It follows that there were many failures and disappointments The author can well testify that there is no royal road to learning and yet in offering this treatise he is prompted by the belief that the man who goes ahead may smooth out some of the rough spots and thereby assist those who come after The book is sold at a price which precludes the possibility of profit to the author You pay only for the printing and the paper the subject matter is gratis Do not look a gift horse in the mouth too closely About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of
