provide immediate protection against microbial pathogens to eradicate infection Activation of innate immunity is crucial for transition to specific immunity and for its orientation and to assist the specific immune response in the recognition of pathogens and their destruction Innate immunity is regularly involved in the arrest of bacterial mycotic viral and parasitic infections giving the specific immune response time to become effective It becomes critically essential in immunocompromised patients who fail to mount specific immune responses due to congenital or acquired immunodeficiencies as a result of chemotherapy dialysis immunosuppressive drugs or HIV infection The Innate Immunity arsenal constitutes polymorphonuclear and mononuclear phagocytes mast cells the complement system Natural Killer cells antimicrobial peptides and presumably a subset of T lymphocytes with TCR $\alpha$  receptors

*Mechanisms in the Pathogenesis of Enteric Diseases 2* Prem S. Paul, David H. Francis, 2012-12-06 This book Mechanisms in the Pathogenesis of Enteric Diseases 2 is an outcome of the Second International Rushmore Conference on Mechanisms in the Pathogenesis of Enteric Diseases held September 3D October 3 1998 in Rapid City South Dakota USA Its chapters represent many of the reviews and papers presented at the conference The meeting was organized by members of the North Central Regional Research Committee NC 62 a consortium of researchers of bovine and swine enteric diseases

from land grant institutions supported by the United States Department of Agriculture The Rushmore Conferences were conceived as a forum for an interdisciplinary discussion of mechanisms of infectious enteric diseases It was intended that such a discussion would stimulate cross pollination of ideas and nurture synergistic collaborations among scientists who might otherwise not interact Enteric diseases are caused by widely divergent pathogens and parasites in broadly different settings and affect multiple organ systems Some enteric diseases affect a single species while others may affect multiple species perhaps including human beings Some enteric diseases were present in antiquity while others have recently emerged Knowledge regarding a particular disease or pathogen has frequently proven useful in understanding another disease or pathogen because common themes in pathogenesis exist As this knowledge base grows strategies in the prevention and control of various enteric diseases often converge Cross disciplinary discussions and collaborations facilitate growth of this knowledge base as well as development of tools for disease interdiction      **Index of Conference Proceedings** British Library.
