how that history has framed the present and suggest how it is likely to influence the fashioning of the future **China's**

Climate-Energy Policy Akihisa Mori,2018-07-04 China s recent climate energy policy an outcome of contemporary
challenges has generated conflict of interest amongst major stakeholders Coupled with a boost in demand for oil gas and coal
as well as a rapid growth in wind and solar power it has not only affected domestic fossil fuel and renewable energy
providers but has also provoked a resource boom affecting development pathways internationally This book therefore seeks
to examine the economic social and ecological effects associated with China s climate energy policy Assessing how the policy
has been and will be formulated and implemented it analyses the changing use of energy CO2 emissions and GDP as well as
social and environmental impacts both domestically and internationally It presents in depth case studies on specific policies
in China and on its resource exporting countries such as Indonesia Australia Myanmar and Mongolia At the same time using
quantitative data it provides detailed input output and applied computable general equilibrium analyses Arguing that China
has actively advanced its climate energy policy to become a leader of global climate governance it demonstrates that China
ultimately relocates the cost of its climate energy policy to resource exporting countries This book will be of great interest to
students and scholars of energy the environment and sustainability as well as Chinese Studies and economics
