Norman,2005 From Gutenberg to the Internet presents 63 original readings from the history of computing networking and telecommunications arranged thematically by chapters Most of the readings record basic discoveries from the 1830s through the 1960s that laid the foundation of the world of digital information in which we live These readings some of which are illustrated trace historic steps from the early nineteenth century development of telegraph systems the first data networks through the development of the earliest general purpose programmable computers and the earliest software to the foundation in 1969 of ARPANET the first national computer network that eventually became the Internet The readings will allow you to review early developments and ideas in the history of information technology that eventually led to the convergence of computing data networking and telecommunications in the Internet The editor has written a lengthy illustrated historical introduction concerning the impact of the Internet on book culture It compares and contrasts the transition from manuscript to print initiated by Gutenberg s invention of printing by moveable type in the 15th century with the transition that began in the mid 19th century from a print centric world to the present world in which printing co exists with various electronic media that converged to form the Internet He also provided a comprehensive and wide ranging annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004 and supplied introductory notes to each reading Some introductory notes contain supplementary illustrations

**Passages from the Life of a Philosopher (Illustrated Edition)** Charles Babbage,2020-04-29 Charles Babbage 1791 1871 was an English polymath a mathematician philosopher inventor and mechanical engineer who originated the idea of a digital programmable computer He is credited with inventing the first mechanical computer that eventually led to more complex electronic designs though all the essential ideas of modern computers are to be found in his Analytical Engine His varied work in other fields has earned him the reputation of being pre eminent among the many polymaths of the 19th century In 1814 Babbage received a degree without examination from Peterhouse Cambridge where he had been the top mathematician and he made swift progress lecturing to the Royal Institution on astronomy in 1815 and being elected a Fellow of the Royal Society in 1816 In 1820 he was instrumental in founding the Royal Astronomical Society whose aim was to reduce astronomical calculations to a more standard form closely connected to Babbage s ideas on computation and in 1824 he won its Gold Medal for his invention of an engine for calculating mathematical and astronomical tables He had begun work on his Difference Engine in 1822 and after his attempt at making the first difference engine fell through he worked on designing a more complex machine called the Analytical Engine which marked the transition from mechanised arithmetic to fully fledged general purpose computation It is on this that his standing as a computer pioneer rests though it was not a single physical machine but rather a succession of designs that Babbage tinkered with until his death Published in 1864 his Passages from the Life of a Philosopher gives an account of the creation of his Difference and Analytical Engines together with an insight into his many and varied interests over a long and prestigious career This edition includes a frontispiece showing a portion of the Difference Engine and a small number of diagrams within the text
