Pathways To Suicide A Survey Of Self Destructive Behaviors:

Pathways to Suicide Ronald W. Maris, 1981-01-01 *Pathways to Suicide* Ronald W. Maris, Bernard Melvin Lazerwitz, 1981 Comprehensive Textbook of Suicidology Alan Lee Berman, Morton M. Silverman, Bruce Michael Bongar, 2000-08-10 Multidisciplinary and comprehensive in scope this volume serves as an authoritative overview of scientific knowledge about suicide and its prevention providing a foundation in theory research and clinical applications Issues relevant to clinical case management are highlighted and various treatment modalities are discussed in light of the latest research findings *Suicidology* Ronald W. Maris, 2019-03-04 Integrating research from multiple disciplines this text provides a comprehensive perspective on suicide and examines what works in prevention and intervention The author is a pioneering researcher and clinician who addresses the classification prevalence and assessment of suicide and self destructive behaviors and explores risk factors at multiple levels from demographic variables personality traits psychiatric diagnoses and neurobiological factors to the social and cultural context Student friendly features include text boxes that dive deeply into specific issues instructive figures and tables thought provoking clinical cases and engaging examples from literature and popular culture The text reviews medical and psychosocial treatment and prevention approaches discusses ways to help those bereaved by suicide and considers issues of professional liability The Idea of Suicide Michael J. Kral, 2019-05-21 This book is about a new theory of suicide as cultural mimesis or as an idea that is internalized from culture Written as part of a new critical focus in suicidology this volume moves away from the dominant strictly scientific understanding of suicide as the result of a mental disorder and towards positioning suicide as an anthropologically salient community driven phenomenon Written by a leading researcher in the field this volume presents a conception of suicide as culturally scripted and it demonstrates how suicide becomes a cultural idiom of distress that for some can become a normative option **Suicide Science** Thomas Joiner, M. David Rudd, 2007-05-08 Suicide kills and maims victims traumatizes loved ones preoccupies clinicians and costs health care and emergency agencies fortunes It should therefore demand a wealth of theoretical scientific and fiduciary attention But in many ways it has Why Although the answer to this question is multi faceted this volume not supposes that one answer to the question is a lack of elaborated and penetrating theoretical approaches The authors of this volume were challenged to apply their considerable theoretical wherewithal to this state of affairs They have risen to this challenge admirably in that several ambitious ideas are presented and developed If ever a phenomenon should inspire humility it is suicide and the volume s authors realize this Although several far reaching views are proposed they are pitched as first approximations with the primary goal of stimulating still more conceptual and empirical work A pressing issue in suicide science is the topic of clinical interventions and clinical approaches more generally Here too this volume contributes covering such topics as therapeutics and prevention comorbidity special populations and clinical risk factors *Position Papers from the Third National Injury Control Conference* ,1992 Routledge Library

Editions: Women and Crime Various Authors, 2022-07-30 This set reissues five books on the subject of women and crime. The titles which were originally published between 1930 and 1996 include a book of case studies of female criminals, a comprehensive annotated bibliography on the social conflict and change of women in crime, and essays which examine the construction of women in criminology. This set will be of particular interest to students of both criminology and women's studies.

Death Attitudes and the Older Adult Adrian Tomer, 2018-10-24 This innovative and informative new text bridges the fields of gerontology and thanatology.

Understanding Suicide and Its Prevention Federico Sanchez, 2010-06 Finally a book that explains suicide using the latest research in suicidology. A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens. The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular. This is an important book for all professionals who deal with mental disorders in general and suicide in particular. It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders. The author begins with a brief summary of the statistics of the whos, the hows, and the wheres of suicide. This gives us a clear idea of the magnitude of the problem of suicide, of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole. Then as an important first step to understanding the medical community's standard approaches to mental disease, he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders. He presents the most accepted current theories and models of suicide. He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation. And he explains how suicide risk assessment is currently done along with other important considerations. He proceeds to explain in everyday language where possible his theory of how the brain works, beginning with a simple explanation of how neurons communicate with each other. Later he explains how the brain controls the body and how we see with the back of our heads, how memory systems become a logical extension or expansion of our sensory and motor systems. Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking, reasoning, and constructing our past, our lives, and our identities. But all this would mean nothing without the introduction of emotions and how the brain constructs contexts. He explains how emotions are an integral part of memories and how these are related to contexts. How basically the brain has created a very concise and compact filing memory system. A clear explanation of how emotions are triggered, regulated, and dissipated is next. These lead to a learned discussion of how these various systems can go haywire, causing mental disorders. A brief but perhaps new and revolutionary approach to these mental disorders is presented next, including Obsessive Compulsive Disorder, Delirium, Dementia, and Other Amnesic Disorders, Manic Depression, and Depression, and Schizophrenia. Ultimately it becomes clear

how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors Prevention of Maladjustment to Life Course Transitions

Moshe Israelashvili, 2023-06-01 This book provides a comprehensive and updated review of the concepts models and interventions related to the process of adjustment to life course transitions In times of transition an individual is exposed to experiences that require them to assume new roles and exhibit updated behaviors Regardless of the characteristics of these transitions exposure to normative trajectories imposes on the person an intensive engagement in a process of re adjustment Sometimes this demand is beyond the scope of one's ability motivation or comprehension Hence some people might ineffectively perceive and or react to the change and end up feeling unable to handle the change and inclined to escape the situation A preventive intervention that either reduces the impact of possible risk factors or fosters possible protective factors would support the people in managing the transition While the importance of prevention of maladjustment is repeatedly mentioned in the literature this is the first known book on how to prevent maladjustment It examines how the sense of transition emerges what adjustment means the models that elaborate on how people manage in times of transition what the antecedents of maladjustment are and especially how maladjustment could be prevented Out of these discussions a new model The Transitional Stress and Adjustment TSA Model is suggested as a grand framework for paving a way forward to better prevent people's maladjustment to life course transitions Prevention of Maladjustment to Life Course Transitions is a much needed cornerstone in the future development within the prevention science framework This book has interdisciplinary appeal for researchers practitioners and graduate students in psychology sociology public health social work criminology medicine health sciences public policy economics and education who consider prevention an important vehicle of intervention to promote health and wellbeing Its focus on the topic of adjustment also would be of special interest to those who explore child and youth development *Handbook of Suicidal Behaviour* Updesh Kumar, 2017-10-26 This essential reference volume in the field of suicidology brings forth leading edge conceptualizations of suicidal behaviour by including emerging trends and recent research advances in the field across the globe It highlights the trajectories of suicidal behaviour emphasizing the psyche behind attempting suicide identifying vulnerable groups and bridging the gap between theoretical underpinnings and application for addressing the aftermath of suicide The handbook delineates research progress on risk

assessment among vulnerable groups of varied milieu Furthermore it introduces various avenues of change and well being It also addresses important concerns related to terrorism and suicide in the armed forces This handbook is a comprehensive repository of the latest research synergized with theoretical conceptualizations that pave the way for newer approaches towards management and prevention of suicidal behaviour It includes contributions by eminent authors across the globe and is a must have resource for scholars academics and professionals in the areas of mental health and social work **Life Span**

Perspectives of Suicide A.A. Leenaars, 2013-06-29 In recent years a great deal of interest has been focused on suicide in the elderly and in the young However in line with modern trends in psychology sociology psychiatry anthropology and other human health fields interest has now shifted to suicide across the life span from childhood through adulthood to old age This book has been conceptualized within this developing tradition There are various ways in which life's timelines can be conceptualized Developmental theory we believe should be open ended This has widened and will continue to widen our understanding of many complicated human acts including suicide Though suicide is in many ways the same across the entire life span understanding the time lines in the suicidal process is imperative To do so however is we believe challenging In this volume we attempt to engage in the process of understanding suicide from a developmental perspective To do this we have been fortunate to obtain the cooperation of a highly competent group of contributors One interesting footnote to our list of authorities is that they represent suicidologists from across the life span a few who are at the beginning of their careers a large number in their middle years and a few who are in the Indian summer of their professional lives **Suicide**

Explained Federico Sanchez, 2007-12-14 Finally a book that explains suicide a must read for the survivors of suicide who want to understand why suicide happens and it also should prove extremely helpful for anyone suffering mental disorders The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic hardly covered in medical schools It is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author's fourth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders In this book on suicide the author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community's standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in every day language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other

Self-Inference Processes James M. Olson, Mark P. Zanna, C. Peter Herman, 2013-03-07 Although self inference processes the ways individuals make judgments about themselves have been studied in social psychology and sociology for many years a distinct literature on this topic has not emerged due to the diversity of relevant issues The editors of this current volume cull recent social psychological research and theory on self inference processes and identify some of the common themes in this area of study The specific topics covered in this volume include how people infer their emotions personality traits and body images from relevant information factors influencing the self concept identity and self standards the impact of self inferences on interpersonal relations conditions motivating escape from the self The book is written for researchers and graduate level students in clinical social developmental health and personality psychology

Suicidal Behavior Richard McKeon, 2022-04-11 A new edition with the latest approaches to assessment and treatment of suicidal behavior With more than 800 000 deaths worldwide each year suicide is one of the leading causes of death The second edition of this volume incorporates the latest research showing which empirically supported approaches to assessment management and treatment really help those at risk Updates include comprehensively updated epidemiological data the role opioid use problems personality disorders and trauma play in suicide new models explaining the development of suicidal ideation and the zero suicide model This book aims to increase clinicians access to empirically supported interventions for suicidal behavior with the hope that these methods will become the standard in clinical practice The book is invaluable as a compact how to reference for clinicians in their daily work and as an educational resource for students and for practice

oriented continuing education Its reader friendly structure makes liberal use of tables boxed clinical examples and clinical vignettes The book which also addresses common obstacles in treating individuals at risk for suicide is an essential resource for anyone working with this high risk population

Histories of Suicide John C. Weaver, David Wright, 2009-01-01 This interdisciplinary collection of essays assembles historians health economists anthropologists and sociologists who examine the history of suicide from a variety of approaches to provide crucial insight into how suicide differs across nations cultures and time periods

Adult Art Psychotherapy Helen B. Landgarten, Darcy Lubbers, 2013-05-13 Adult Art Psychotherapy illuminates the range of ever expanding nature of art therapy as it completes its first two decades of formal existence The editors suggest that clinical art therapy is capable of adapting to different theories and methods of therapy and that it is equally facile in responding to the diverse problems opportunities and changes in adult life

Lives and Deaths Antoon A. Leenaars, 2023-01-06 Edwin S Shneidman is recognized as the central figure in the field of suicidology His writings have taught countless psychologists and other health professionals about the complexity of suicide death and bereavement This collection of his writings spans the entirety of his career and offers a unique insight into the development of his thinking The material is broken down into five parts Psychological Assessment Logic Melville and Murray Suicide and Death and each section includes an introduction by the editor Lives and Deaths is a vital resource for those in suicidology and related fields allowing the reader to sample a variety of selections from Shneidman s work in one compact volume The book is ideal for classroom use by upper level undergraduates and graduate students in the history of suicidology or as a supplemental text in a general suicidology course It is also of interest to clinicians treating high risk patients as well as a more general audience including psychologists social workers crisis counselors and suicide prevention specialists

American Suicide Howard I. Kushner, 1991 For the nineteenth century physician the moral issues that suicide raised could not be isolated from its constitutional components Thus those who exhibited suicidal tendencies were subjected to an amalgamation of pharmacological social and psychological interventions which practioners labeled the moral treatment By the 1890s however the consensus about the causes of suicide became unglued as a bacteriological medicine and the rise of the social sciences jointly served to call into question eclectic diagnoses The goal of American Suicide is to demonstrate how the apparent contradictions among sociological psychoanalytic and neurobiological explanations of the etiology of suicide may be resolved Only through a reintegration of culture psychology and biology can we begin to construct a satisfactory answer to the questions first raised by Durkheim Freud and Kraepelin
