Kondratyev, Nikolai Filatov, 1999-05-01 Diminishing water resources are becoming of increasing concern because in many countries the sources of drinking water are close to being exhausted Therefore there is an urgent need to study and assess the various components of global water resources of which freshwater lakes are one of the most important This book discusses contemporary limnological problems on a local regional and global scale with special emphasis on the application of remote sensing techniques to monitor lake dynamics thermodynamics biodynamics and water quality An interactive approach is used to assess various processes from both the numerical modelling and observational standpoints The authors recommend a combined use of in situ and remote sensing data giving a specific comparative analysis of the lakes of north western Russia and the American Great Lakes as an illustration The role of GIS is discussed and emphasised *Third Earth Resources Technology Satellite-1 Symposium: Section A-B.
