Levy,2013-11-11 The discovery of antibiotics heralded medicine's triumph over previously fatal diseases that once destroyed

entire civilizations thus earning their reputation as miracle drugs But today the terrifying reality of antibiotic resistant bacteria resulting from our widespread misuse of antibiotics forewarns us that the miracle may be coming to an end The seemingly innocent consumer who demands antibiotics to treat nonbacterial diseases such as the common cold or plays doctor by saving old prescriptions for later use is paving the way for a future of antibiotic failure What harm can it do is a popular refrain of people worldwide as they pop another antibiotic pill Dr Stuart Levy the leading international expert on hazards of antibiotic misuse reveals how this cavalier and naive attitude about the power of antibiotics can have deadly consequences He explains that we are presently witnessing a massive evolutionary change in bacteria This build up of new antibiotic resistant bacteria in individuals and the environment worldwide is an insidious and silent process Thus unwittingly consumers encounter resistant bacteria in their meat poultry fish and vegetables Unregulated dispensing of antibiotics in poorer countries breeds countless more resistant strains Since bacteria recognize no geographical boundaries resistant forms can travel the globe If this trend continues to grow unchecked we may someday find that all of our antibiotics are obsolete Today doctors can no longer expect that their first choice of antibiotic for women s urinary tract infections or children s ear infections will work Similarly cancer therapy is rendered useless if patients are unable to fight infections that are sometimes resistant to eight to ten different drugs In developing countries people are now dying of previously treatable diseases that are no longer responsive to traditional antibiotics These problems are just a harbinger of what will come if we do not act now Dr Levy recognized by The New Yorker for his superb contributions to this field is sending out an urgent message that the world cannot afford to ignore any longer The goal of this unprecedented investigation into the dangers of antibiotic misuse is to protect the world community from resistant infections and ensure the success of antibiotics for generations to come
