Life after Foster Care Loring Paul Jones, 2018-08-17 This book appraises readers of the present conditions of former and emancipated foster youth provides evidence based best practices regarding their experiences and proposes new policies for ensuring better outcomes for these children upon discharge from foster care For most American youth the transition to adulthood is gradual and aided by support from parents and others In contrast foster youth are expected to arrive at self sufficiency abruptly and without the same level of support Such an expectation may be due in part to what Loring Paul Jones has found in his research that many of the studies conducted thus far have been fragmented and incomplete often focusing on a particular state or agency that may follow policies not applicable nationwide This book connects the dots between these disparate studies to provide child welfare practitioners policy makers and students with a broader picture of the state of American youth following discharge from foster care It examines not only child welfare policies but also related policies in areas such as housing and education that may contribute to the success or failure of foster youth in society It additionally draws lessons from successful programs to provide readers with the tools needed to develop foster and after care systems that more closely mirror the support afforded to youth in the general population

Children in Foster Care James Barber, Paul Delfabbro, Robyn Gilbertson, 2004-08-02 Researchers practitioners journalists and politicians increasingly recognise that foster care throughout the world is in a state of crisis There are more and more children needing care and as residential alternatives dry up more of these children are being assigned to foster families This book reports the major findings of a two year longitudinal study of 235 such children who entered the foster care system in Southern Australia between 1998 and 1999 As well as examining the changing policy context of children s services the book documents the psychosocial outcomes for these children their feedback on their experiences of care and the views of their social workers and carers In the process the book examines some cherished beliefs about foster care policy and sheds new light on them The research reveals that while most children do quite well in foster care up to the two year point there is a worrying amount of placement instability at a time when the concentration of emotionally troubled children in care is increasing throughout the western world Although surprisingly placement instability does not appear to produce psychosocial impairment for a period of up to eight months in care it has an extreme effect on children who are moved from placement to placement because no carer will tolerate their behaviour These children are consigned to a life of distribution and emotional upheaval because of the lack of alternative forms of care Another unexpected finding of the research is that increasing the rate of parental contact achieves little or nothing in relation to the likelihood of family reunification As child welfare increasingly

enters a world of research based practice Children in Foster Care provides some much needed hard evidence of how foster care policy and practice can be improved
