Pharmacology of Neuromuscular Function William C. Bowman, 2013-10-22 Pharmacology of Neuromuscular Function Second Edition provides information pertinent to drugs that affect membrane potentials of the conduction of action potentials in nerve endings and muscle fibers This book reviews in a general way some of the properties of excitable membranes Organized into seven chapters this edition begins with an overview of innervation of striated muscles by somatic efferent nerve fibers This text then explains the transmission from nerve to muscle which is mediated by acetylcholine that is synthesized and stored in the axon terminals Other chapters consider the different steps in the transmission process that occur in the nerve endings which may be modified by the actions of drugs and toxins This book discusses as well the primary action of neuromuscular blocking agents The final chapter deals with the cytoplasm of a muscle cell or fiber that contains all the usual subcellular organelles including mitochondria and nuclei This book is a valuable resource for pharmacologists and anesthetists

Molecular Mechanisms of Neurotransmitter Release Zhao-Wen Wang, 2010-11-16 Neurons in the nervous system organize into complex networks and their functions are precisely controlled The most important means for neurons to communicate with each other is transmission through chemical synapses where the release of neurotransmitters by the presynaptic nerve terminal of one neuron influences the function of a second neuron Since the discovery of chemical neurotransmission by Otto Loewi in the 1920s great progress has been made in our understanding of molecular mechanisms of neurotransmitter release The last decade has seen an explosion of knowledge in this field The aim of Molecular Mechanisms of Neurotransmitter Release is to provide up to date in depth coverage of essentially all major molecular mechanisms of neurotransmitter release The contributors have made great efforts to write concisely but with sufficient background information and to use figures diagrams to present clearly key concepts or experiments It is hoped that this book may serve as a learning tool for neuroscience students a solid reference for neuroscientists and a source of knowledge for people who have a general interest in neuroscience I was fortunate to be able to gather contributions from a group of outstanding scientists I thank them for their efforts In particular I want to thank Dr Erik Jorgensen who offered valuable suggestions about the book in addition to contributing an excellent chapter I thank US National Science Foundation and National Institute of Health for their supports

Receptors in the Nervous System Abel Lajtha, 2013-06-29 A major advance in the biological sciences in the past decade has been the biochemical identification of cell membrane receptors The existence of receptor substances on the surface of cells that recognize and bind to extracellular molecules was proposed at the beginning of the century by the pharmacologist and immunologist Paul Ehrlich and the physiologist J N Langley Since then receptors have been found to play an important role in numerous physiological and pathological processes Over the years many attempts

have been made to physically isolate and chemically characterize receptors but because of the receptors extremely low concentration and membrane localization these efforts have met with limited success Yet despite the failure to characterize receptor substances the concept of the presence of such molecules has had considerable heuristic value Using pharmacological physiological and immunologic approaches researchers have identified several specific receptors e g α and adrenergic nicotinic and muscarinic cholinergic and histaminergic With the characterization of various types of receptors on cell membranes many drugs were developed that proved to be experimentally and therapeutically useful It was only in the early 1970s that methods for the specific measurement chemical characterization and physical isolation of cell membrane receptors were developed These advances were made possible by the availability of ligands with high specific radioactivity that retained their biological activity and of experimental procedures that differentiated between specific and non specific binding of ligands
