Rationalizing Medical Work Decision Support Techniques And Medical Practices Inside Technology:

Rationalizing Medical Work Marc Berg, 1997 Advocates argue that they will make medical practice more rational more uniform and more efficient and that they will transform the art of medical work into a science Critics argue that formal tools cannot and should not supplant humans in most real life tasks *Technology and Medical Practice* Boel Berner, 2016-04-01 The advanced technologies being used in diagnosis and care within modern medicine whilst supporting and making medical practices possible may also conflict with established traditions of medicine and care What happens to the patient in a technologized medical environment How are doctors nurses and medical scientists practices changed when artefacts are involved How is knowledge negotiated or relations of power reconfigured *Technology and Medical Practice* addresses these developments and dilemmas focusing on various practices with technologies within hospitals and sociotechnical systems of care Combining science and technology studies with medical sociology the history of medicine and feminist approaches to science this book presents analyses of artefacts in use across a variety of settings within the UK USA and Europe and will appeal to sociologists anthropologists and scholars of science and technology alike , Evidence-Based Geriatric Medicine Jayna Holroyd-Leduc, Madhuri Reddy, 2012-03-09 The latest addition to the Evidence Based Book series Evidence Based Geriatric Medicine provides non geriatrician clinicians an overview of key topics central to the care of the older patient This guide focuses on the management of common problems in the elderly taking into account their life situations as well as treatment of specific conditions Leading geriatricians with expertise in evidence based medicine utilize the best available evidence and present this information in a concise easy to use question based format Evidence Based Geriatric Medicine is a unique guide to the optimum management of older patients *Listening in the Field* Joeri Bruyninckx, 2024-11-26 The transformation of sound recording into a scientific technique in the study of birdsong as biologists turned wildlife sounds into scientific objects Scientific observation and representation tend to be seen as exclusively visual affairs But scientists have often drawn on sensory experiences other than the visual Since the end of the nineteenth century biologists have used a variety of techniques to register wildlife sounds In this book Joeri Bruyninckx describes the evolution of sound recording into a scientific technique for studying the songs and calls of wild birds and asks what it means to listen to animal voices as a scientist The practice of recording birdsong took shape at the intersection of popular entertainment and field ornithology turning recordings into objects of investigation and popular fascination Shaped by the technologies and interests of amateur naturalism and music teaching radio broadcasting and gramophone production hobby electronics and communication engineering birdsong recordings traveled back and forth between scientific and popular domains to appear on gramophone recordings radio broadcasts and movie soundtracks Bruyninckx follows four technologies the musical score the electric microphone the portable magnetic tape recorder and the sound spectrograph through a cultural history of field recording and scientific listening He chronicles a period when verbal descriptions musical

notations and onomatopoeic syllables represented birdsong and shaped a community of listeners later electric recordings struggled with notions of fidelity realism objectivity and authenticity scientists early citizen scientists and the recording industry negotiated recording exchange and trained listeners complemented the visual authority of spectrographic laboratory analyses This book reveals a scientific process fraught with conversions between field and laboratory sound and image science and its various audiences

Milk and Honey Tamar Novick, 2023-07-11 An innovative historical analysis of the intersection of religion and technology in making the modern state focusing on bodily production and reproduction across the human animal divide In *Milk and Honey* Tamar Novick writes a revolutionary environmental history of the state that centers on the intersection of technology and religion in modern Israel Palestine Focusing on animals and the management of their production and reproduction across three political regimes the late Ottoman rule British rule and the early Israeli state Novick draws attention to the ways in which settlers and state experts used agricultural technology to recreate a biblical idea of past plenitude literally a land flowing with milk and honey through the bodies of animals and people Novick presents a series of case studies involving the management of water buffalo bees goats sheep cows and people in Palestine Israel She traces the intimate forms of knowledge and bodily labor production and reproduction in which this process took place and the intertwining of bodily political and environmental realms in the transformation of Palestine Israel Her wide ranging approach shows technology never replaced religion as a colonial device Rather it merged with settler colonial aspirations to salvage the land bolstering the effort to seize control over territory and people Fusing technology religious fervor bodily labor and political ecology *Milk and Honey* provides a novel account of the practices that defined and continue to shape settler colonialism in the Palestine Israel revealing the ongoing entanglement of technoscience and religion in our time

Spil, 2001 An overview of the different aspects of the strategies and challenges facing healthcare information systems It offers many solutions and remedies in utilizing information technologies in support of a strategic posture of healthcare organizations in the 21st century

Media Technologies Tarleton Gillespie, Pablo J. Boczkowski, Kirsten A. Foot, 2014-01-24 Scholars from communication and media studies join those from science and technology studies to examine media technologies as complex sociomaterial phenomena In recent years scholarship around media technologies has finally shed the assumption that these technologies are separate from and powerfully determining of social life looking at them instead as produced by and embedded in distinct social cultural and political practices Communication and media scholars have increasingly taken theoretical perspectives originating in science and technology studies STS while some STS scholars interested in information technologies have linked their research to media studies inquiries into the symbolic dimensions of these tools In this volume scholars from both fields come together to advance this view of media technologies as complex sociomaterial phenomena The

contributors first address the relationship between materiality and mediation considering such topics as the lived realities of network infrastructure. The contributors then highlight media technologies as always in motion held together through the minute unobserved work of many including efforts to keep these technologies alive. Contributors Pablo J Boczkowski, Geoffrey C Bowker, Finn Brunton, Gabriella Coleman, Gregory J Downey, Kirsten A Foot, Tarleton Gillespie, Steven J Jackson, Christopher M Kelty, Leah A Lievrouw, Sonia Livingstone, Ignacio Siles, Jonathan Sterne, Lucy Suchman, Fred Turner.

The Science of Bureaucracy David Demortain, 2020-01-21. How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades. The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs. Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking. Demortain traces the creation of these methods for the governance of risk, the controversies to which they responded and the controversies that they aroused in turn. He discusses the professional networks in which they were conceived, how they were used and how they served to legitimize the EPA. Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment. He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice, ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s. Through its rise and fall at the EPA, risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment, risk and its own legitimacy.

Remaking the News Pablo J. Boczkowski, C. W. Anderson, 2024-05-21. Leading scholars chart the future of studies on technology and journalism in the digital age. The use of digital technology has transformed the way news is produced, distributed and received. Just as media organizations and journalists have realized that technology is a central and indispensable part of their enterprise, scholars of journalism have shifted their focus to the role of technology. In *Remaking the News*, leading scholars chart the future of studies on technology and journalism in the digital age. These ongoing changes in journalism invite scholars to rethink how they approach this dynamic field of inquiry. The contributors consider theoretical and methodological issues, concepts from the social science canon that can help make sense of journalism, the occupational culture and practice of journalism and major gaps in current scholarship on the news, analyses of inequality, history and failure. Contributors: Mike Ananny, C W Anderson, Rodney Benson, Pablo J Boczkowski, Michael X Delli Carpini, Mark Deuze.

Greening Berlin Jens Lachmund, 2013-01-04 How plant and animal species conservation became part of urban planning in Berlin and how the science of ecology contributed to this change Although nature conservation has traditionally focused on the countryside issues of biodiversity protection also appear on the political agendas of many cities One of the emblematic examples of this now worldwide trend has been the German city of Berlin where since the 1970s urban planning has been complemented by a systematic policy of biotope protection at first only in the walled city island of West Berlin but subsequently across the whole of the reunified capital In *Greening Berlin* Jens Lachmund uses the example of Berlin to examine the scientific and political dynamics that produced this change After describing a tradition of urban greening in Berlin that began in the late nineteenth century Lachmund details the practices of urban ecology and nature preservation that emerged in West Berlin after World War II and have continued in post unification Berlin He tells how ecologists and naturalists created an ecological understanding of urban space on which later nature conservation policy was based Lachmund argues that scientific change in ecology and the new politics of nature mutually shaped or co produced each other under locally specific conditions in Berlin He shows how the practices of ecologists coalesced with administrative practices to form an institutionally embedded and politically consequential nature regime Lachmund's study sheds light not only on the changing place of nature in the modern city but also on the political use of science in environmental conflicts showing the

mutual formation of science politics and nature in an urban context Researching the Future in Information Systems Mike Chiasson, Ola Henfridsson, Helena Karsten, Janice I. DeGross, 2011-06-15 This book constitutes the refereed proceedings of the IFIP WG 8.2 Working Conference Researching the Future Future IS 2011 held in Turku Finland in June 2011 The 17 revised full papers presented together with 4 panels and workshops were carefully reviewed and selected from numerous submissions The papers are organized into 6 topical sections how the future and the past are connected and inter related critical view of the future technological futures the future of information technology and work related practices in health care the future of industrial and institutional practices and outcomes through information technology and the future of critical realism in IS research **Proceedings of the Fifth European Conference on Computer Supported Cooperative Work**

John Hughes, Wolfgang Prinz, Tom Rodden, K. Schmidt, 2013-04-17 The emergence of network facilities and the increased availability of personal computer systems over the last decade has seen the development of interest in the use of computers to support cooperative work This volume presents the proceedings of the fifth European conference on Computer Supported Cooperative Work CSCW This is a multidisciplinary area which embraces both the development of new technologies and an understanding of the relationship between technology and society This volume contains a collection of papers that encompass activities in the field It includes papers addressing distributed virtual environments the use of the Internet studies of work and emerging models theories and techniques to support the development of cooperative applications The papers present emerging technologies alongside new methods and approaches to the development of this important class of applications The work in this volume represents the best of the current research and practice within CSCW The collection of papers presented here will appeal to both researchers and practitioners alike as they combine an understanding of the nature of work with the possibilities offered by new technologies **Technology and Privacy** Philip Agre, Marc

Rotenberg, 1998 Over the last several years the realm of technology and privacy has been transformed creating a landscape that is both dangerous and encouraging Significant changes include large increases in communications bandwidths the widespread adoption of computer networking and public key cryptography new digital media that support a wide range of social relationships a massive body of practical experience in the development and application of data protection laws and the rapid globalization of manufacturing culture and policy making The essays in this book provide a new conceptual framework for the analysis and debate of privacy policy and for the design and development of information systems

Vulnerability in Technological Cultures Anique Hommels, Jessica Mesman, Wiebe E. Bijker, 2014-03-21 Novel technologies and scientific advancements offer not only opportunities but risks Technological systems are vulnerable to human error and technical malfunctioning that have far reaching consequences one flipped switch can cause a cascading power failure across a networked electric grid Yet once addressed vulnerability accompanied by coping mechanisms may yield a more flexible and resilient society This book investigates vulnerability in both its negative and positive aspects in

technological cultures The contributors argue that viewing risk in terms of vulnerability offers a novel approach to understanding the risks and benefits of science and technology Such an approach broadens conventional risk analysis by connecting to issues of justice solidarity and livelihood and enabling comparisons between the global north and south The book explores case studies that range from agricultural practices in India to neonatal intensive care medicine in Western hospitals these cases spanning the issues addressed in the book illustrate what vulnerability is and does The book offers conceptual frameworks for empirical description and analysis of vulnerability that elucidate its ambiguity context dependence and constructed nature Finally the book addresses the implications of these analyses for the governance of vulnerability proposing a more reflexive way of dealing with vulnerability in technological cultures

Handling Digital Brains Morana Ala, 2011-04-22 An analysis of how fMRI researchers actively involve their bodies with hand movements in particular in laboratory practice The results of fMRI brain scanning require extensive analysis in the laboratory In *Handling Digital Brains* Morana Ala shows that fMRI researchers do not sit passively staring at computer screens but actively involve their bodies in laboratory practice Discussing fMRI visuals with colleagues scientists animate the scans with gestures and talk as they work with computers Ala argues that to understand how digital scientific visuals take on meaning we must consider their dynamic coordination with gesture speech and working hands These multimodal actions she suggests are an essential component of digital scientific visuals A semiotician trained in cognitive science Ala grounds her discussion in concepts from Peirce's semiotics and her methodology in ethnography and multimodal conversation analysis Basing her observations on videotaped records of activity in three fMRI research labs Ala describes scientists' manual engagement with digital visuals of the human brain Doing so she turns her attention to the issue of practical thinking Ala argues that although fMRI technology directs scientists to consider human thinking in terms of an individual brain scientific practices in the fMRI lab demonstrate thinking that engages the whole lived body and the world in which the body is situated The turn toward the digital does not bring with it abstraction but a manual and embodied engagement The practical and multimodal engagement with digital brains in the laboratory challenges certain assumptions behind fMRI technology it suggests our hands are essential to learning and the making of meaning

The Global Biopolitics of the IUD Chikako Takeshita, 2011-10-21 The biography of a multifaceted technological object the IUD illuminates how political contexts shaped contraceptive development marketing use and users The intrauterine device IUD is used by 150 million women around the world It is the second most prevalent method of female fertility control in the global South and the third most prevalent in the global North Over its five decades of use the IUD has been viewed both as a means for women's reproductive autonomy and as coercive tool of state imposed population control as a convenient form of birth control on a par with the pill and as a threat to women's health In this book Chikako Takeshita investigates the development marketing and use of the IUD since the 1960s She offers a biography of a multifaceted technological object through a feminist science studies lens tracing the transformations

of the scientific discourse around it over time and across different geographies Takeshita describes how developers of the IUD adapted to different social interests in their research and how changing assumptions about race class and female sexuality often guided scientific inquiries The IUD she argues became a politically versatile technology adaptable to both feminist and nonfeminist reproductive politics because of researchers attempts to maintain the device s suitability for women in both the developing and the developed world Takeshita traces the evolution of scientists concerns from contraceptive efficacy and product safety to the politics of abortion and describes the most recent hormone releasing menstruation suppressing iteration of the IUD Examining fifty years of IUD development and use Takeshita finds a microcosm of the global political economy of women s bodies health and sexuality in the history of this contraceptive device
