

River Sunbird

George Ernest Shelley

River Sunbird:

Sunbirds Clive F. Mann, Robert A. Cheke, 2010-07-30 Sunbirds is the first book since the 19th Century to cover in detail all the world's sunbirds and spiderhunters the Nectarinidae. It also includes the allied families of flowerpeckers and sugarbirds. A total of 176 species is described and illustrated. The book has been designed to help readers identify all of these species and also their various subspecies, the most distinctive of which are illustrated as well as described. Each species account provides a distribution map, a summary of identification criteria and a description of how the species differs from similar ones. The calls and songs, habitat, geographical distribution, status, movements, food, including a list of known food plants, habits and breeding biology are also described. Finally, a full description of the species and salient features of each subspecies is given together with measurements and references. Sunbirds not only aids identification, it provides a wealth of information on the ecology and behaviour of these birds. The authors have carried out extensive fieldwork in Asia and Africa. They have also studied skins, nests and eggs held by museums, analysed tape recordings and critically reviewed the vast amount of material contained in books and scientific journals. The superb plates would not have been possible without the exhaustive study of specimens, which together with the use of photographs of living birds, has resulted in the artist Richard Allen capturing the essence of the birds, their jizz and accurately portraying the beautiful, bright, often iridescent plumages of these spectacular families.

Sunbirds of the World Robert A. Cheke, Clive F. Mann, 2025-06-12 This is a gorgeous book about some of the world's most gorgeous birds. JARED DIAMOND Sunbirds are among the most striking of all bird groups; their dazzling iridescent plumage and long curved bills are conspicuous when the birds visit garden flowers on sunny days to feed on nectar. Some species, especially the females, are duller in appearance and harder to spot, feeding mostly on insects high up in forest canopies. Spiderhunters, as their name suggests, feed extensively on spiders, while sunbirds, other close relatives, the flowerpeckers, are especially partial to mistletoe berries. This book is the last word on sunbird identification, ecology and behaviour. Now in its second edition, it has been fully revised and updated to reflect the many developments that have occurred in sunbird taxonomy as well as the new research that has been published on their biology. It covers all 218 currently recognised species, providing details of key identification features, voice, habitat, distribution, conservation status, movements, food and behaviour. New colour art by award-winning artist Richard Allen has been added, and hundreds of high quality colour photographs beautifully capture every species. Maps accurately depict geographical distributions of each taxon to subspecies level. This beautiful book is the definitive reference to the sunbirds, flowerpeckers, spiderhunters and sugarbirds of the world and is essential reading for researchers, birders and conservationists alike.
