Search For An Alternative:

Spatial Search Gunther Maier, 2012-12-06 Two areas have fascinated me for a long time One is the micro economic theory of consumer behavior the other one the role of space in economic processes Usually the two don't go together very well In more advanced versions of microeconomic consumer theory its economic actor may face uncertainty have to allocate resources over time or have to take into account the characteristics of products but rarely deals with space He/she inhabits a spaceless point economy Regional Science on the other hand describes and analyzes the spatial structure and development of the economy but either ignores individual decision making altogether or treats it in a rather simplistic way In this book I try to bring together these two areas of interest of mine I do this by use of the microeconomic concept of search and placing it in an explicit spatial context The result in my opinion is a theoretical concept with fascinating implications a broad set of potential implications and numerous interesting research questions After reading this book where I layout the basic idea of spatial search describe its elements and discuss some of its implications I hope the reader will share this opinion There are still plenty of unanswered research questions in this part of economic theory Hopefully this book will stimulate more work along these lines

Programming Constraint Services Christian Schulte, 2002 This book is concerned with the architecture and implementation of constraint engines The author's main contribution is that constraint services such as search and combinators are made programmable this is achieved by devising computation spaces as simple abstractions for programming constraint services at a high level State of the art and novel search strategies such as visual interactive search and parallel search are covered This book is indispensable reading for anyone seriously interested in constraint technology

Patent and Trademark Information Virginia Ann Baldwin, 2013-05-13 Discover new techniques for researching patents and trademarks Patent and Trademark

Information Uses and Perspectives addresses an essential yet undervalued and often underused class of scientific and technical information. Library staff, information specialists, corporation heads and administrators, inventors, school faculty, scientists, engineers and engineering science and library students will gain valuable insight on historical research, practical applications and the availability and accessibility of patenting authorities. This book focuses on methods for searching international patents and trademark information for patrons of the library using the Internet, databases and other sources. This book contains tips and nuts and bolts advice from experienced librarians who either practice in patent and trademark depository libraries or are experts in researching patents for library patrons. Their advice will help you navigate decision points and search paths for locating patent and trademark information from state, federal and international sources. Special features include tables and figures as well as bibliographies that provide extensive resources for locating additional information. The first half of the book is dedicated to issues involving patents, including disseminating enemy technical information during World War II, basic novelty patent searching in seven steps, using patent information for historical genealogical research, esp. cenet, Europe's network of patent databases, regional patent systems, a challenge for the international searcher, patent data for technology assessment, applications, patent databases and retrieval methods. The second half of Patent and Trademark Information guides you in searching out trademarks, company and owner names and databases. An entire chapter is dedicated to searching for trademark and/or company names for each of the 50 states, Puerto Rico and the District of Columbia. Another chapter investigates five free international Web-based patent sites.

Innovations in Design & Decision Support Systems in Architecture and Urban Planning Jos P. Leeuwen, van, Harry J.P. Timmermans, 2006-09-21. Traditionally the DDSS conferences aim to be a platform for both starting and experienced researchers who focus on the development and application of computer support in urban planning and architectural design. This volume contains 31 peer-reviewed papers from this year's conference. This book will bring researchers together and is a valuable resource for their continuous joint effort to improve the design and planning of our environment. Computational Organization Theory Kathleen M. Carley, Michael J. Prietula, 2014-03-05. This volume represents an advance in our understanding of how to represent and reason about organizational phenomena. Although organizational theorists have long grappled with the complexities of adaptive agents, ecological systems and non-linear relations among the basic elements of organizational design, they have not until recently had the tools to grapple with these complex relationships. Recent advances in logic, symbolic programming, network analysis and computer technology have made possible a series of tools that can be used to understand the complexities of organizational behavior. New computational techniques make it possible to develop and test more realistic models of organizational behavior. This volume offers examples of this new breed of models and provides insight into how these advances and techniques can be used to extend our theoretical understanding of organizations. Authored by leading researchers in the area of computational organization theory.

the various chapters demonstrate the value of computational analysis for organizational theory and advance our understanding of the relationship between organizational design and performance This book contains both theoretical and methodological contributions that enable organizational theorists to use computational and mathematical techniques to systematically address the complex relationships that underlie organizational life It also presents new or sometimes renewed approaches on how to conduct organizational research from multiple formal perspectives including simulation numerical analysis symbolic logic mathematical modeling and graph theory
