Joseph J. Kerekes, 2012-12-06 Birds are an integral part of most freshwater ecosystems lakes rivers wetlands but their role in the trophic dynamics of these water bodies has often been overlooked As a conspicuous part of the biota of water bodies aquatic birds are indicators of their trophic state both in terms of species composition quality as well as occupancy and breeding quantity Birds may also influence the trophic state of a water body by importing nutrients e.g. resident or migrating birds feeding on adjacent watersheds or the sea Because of anthropogenic activities predation or their mobility birds may not utilize otherwise suitable aquatic habitat These factors complicate the relationship between aquatic bird production and the trophic status of habitats As a consequence the role of aquatic birds in freshwater ecosystems has usually been ignored This volume contains a wide range of papers selected from those presented at the symposium and reviewed **The Geological Magazine Or Monthly Journal of Geology**, 1879 *Lough Neagh* Dr William Burke, Dr Liam Campbell, 2024-01-09 It is
