Overcoming Survey Research Problems New Directions For Institutional Research:

Overcoming Survey Research Problems Stephen R. Porter, 2004-04-10 Paper and electronic surveys of students and faculty have become increasingly popular in higher education research and are now used in almost all facets of assessment and planning Yet as the demand for survey research has increased survey response rates have been falling Low response rates are problematic because they can call into question the validity of the results as well as increase survey administration costs This volume examines an array of survey research problems and best practices with the aim of providing readers with ways to increase response rates while controlling costs Many institutional researchers face additional demands such as administering multiple surveys over time or administering surveys on sensitive subjects such as student alcohol or drug use New technologies for survey administration also provide many different options This volume discusses these issues in terms of the survey research literature as well as the experiences of practitioners in the field This is the 121st volume of the higher education quarterly journal *New Directions for Institutional Research*

Improving Survey Response Ineke A. L. Stoop, Jaak Billiet, Achim Koch, Rory Fitzgerald, 2010-03-09 High response rates have traditionally been considered as one of the main indicators of survey quality Obtaining high response rates is sometimes difficult and expensive but clearly plays a beneficial role in terms of improving data quality It is becoming increasingly clear however that simply boosting response to achieve a higher response rate will not in itself eradicate nonresponse bias In this book the authors argue that high response rates should not be seen as a goal in themselves but rather as part of an overall survey quality strategy based on random probability sampling and aimed at minimising nonresponse bias Key features of Improving Survey Response A detailed coverage of nonresponse issues including a unique examination of cross national

survey nonresponse processes and outcomes A discussion of the potential causes of nonresponse and practical strategies to combat it A detailed examination of the impact of nonresponse and of techniques for adjusting for it once it has occurred Examples of best practices and experiments drawn from 25 European countries Supplemented by the European Social Survey ESS websites containing materials for the measurement and analysis of nonresponse based on detailed country level response process datasets The book is designed to help survey researchers and those commissioning surveys by explaining how to prioritise the reduction of nonresponse bias rather than focusing on increasing the overall response rate It shows substantive researchers how nonresponse can impact on substantive outcomes
