Oversold And Underused Computers In The Classroom:

Oversold and Underused Larry CUBAN, 2009-06-30 Impelled by a demand for increasing American strength in the new global economy many educators public officials business leaders and parents argue that school computers and Internet access will improve academic learning and prepare students for an information based workplace But just how valid is this argument In Oversold and Underused one of the most respected voices in American education argues that when teachers are not given a say in how the technology might reshape schools computers are merely souped up typewriters and classrooms continue to run much as they did a generation ago In his studies of early childhood high school and university classrooms in Silicon Valley Larry Cuban found that students and teachers use the new technologies far less in the classroom than they do at home and that teachers who use computers for instruction do so infrequently and unimaginatively Cuban points out that historical and organizational economic contexts influence how teachers use technical innovations Computers can be useful when teachers sufficiently understand the technology themselves believe it will enhance learning and have the power to shape their own curricula But these conditions can't be met without a broader and deeper commitment to public education beyond preparing workers More attention Cuban says needs to be paid to the civic and social goals of schooling goals that make the question of how many computers are in classrooms trivial Handbook of Research on New Media Literacy at the K-12 Level: Issues and Challenges Tan Wee Hin, Leo, Subramaniam, R., 2009-05-31 Provides comprehensive articles on significant issues methods and theories currently combining the studies of technology and literacy *Technology in Education* Cleborne D Maddux, D Lamont Johnson, 2013-12-19 Examine the history of the microcomputer and its impact on education Under the editorship of D LaMont Johnson PhD a nationally recognized leader in the field of educational computing *Computers in the Schools* has been a powerful tool in educational settings Now after 20 years Professor Johnson muses on how far information technology has come *Technology in Education A Twenty Year Perspective* brings you a retrospective look at the trends and issues relating to the integration of computers into the school curriculum covering 25 years He joins several other colleagues to follow the historical journey of the dream machine to the technological wonder it has become *Technology in Education A Twenty Year Perspective* will leave you better informed on such topics as the obstacles slowing the integration of information technology in education why are computers still collecting dust in many classrooms the predictions that were made by early computer enthusiasts and how close or off the mark those predictions came how information technology has impacted education and society so far historical advances in education that should be celebrated such as the advent of the World Wide Web the student's perspective of computers in education and much more *Computers in the Schools* is the one of the oldest academic journals dealing directly with the integration of information technology into the educational setting *Technology in Education A Twenty Year Perspective* provides an important overview by some of the leading experts in the field From the earliest predictions and opinions to the latest trends and findings this book celebrating

the journal's twentieth anniversary is a vital research tool for students and professors of information technology in education

Educating the First Digital Generation Paul G. Harwood, Victor Asal, 2009-10-16 Asal and Harwood explore how today's information technology is changing how we educate and are educated Focusing on the United States with useful insights from the classroom digital revolution in a few other key places the United Kingdom Australia and India the authors investigate the impact of today's technologies on education how they impact teachers and teaching children and learning and the intersection of teaching and learning For example they tell us what the educational impact of having over 60% of America online is The authors explain exactly how new technologies are changing the learning environment in and out of the classroom with a focus on the effects on K 12 education Chapters include vignettes about children who are integrating information technologies into their lives at school and at home and those children who for a variety of reasons most notably socio economic have found themselves excluded as full members of the first digital generation There are also accounts from K 12 teachers who are incorporating technology into their classroom environments Using closed circuit cameras electronic cheating and distance learning are all also discussed at length How Computers Entered the Classroom, 1960-2000

Carmen Flury, Michael Geiss, 2023-06-19 In the history of education the question of how computers were introduced into European classrooms has so far been largely neglected This edited volume strives to address this gap The contributions shed light on the computerization of education from a historical perspective by attending closely to the different actors involved such as politicians computer manufacturers teachers and students political rationales and ideologies as well as financial political or organizational structures and relations The case studies highlight differences in political and economic power as well as in ideological reasoning and the priorities set by different stakeholders in the process of introducing computers into education However the contributions also demonstrate that simple cold war narratives fail to capture the complex dynamics and entanglements in the history of computers as an educational technology and a subject taught in schools The edited volume thus provides a comprehensive historical understanding of the role of education in an emerging digital society

Digital Technologies for School Collaboration A. Gouseti, 2014-05-21 Web based school collaboration has attracted the sustained attention of educators policy makers and governmental bodies around the world during the past decade This book sheds new light on this topical but ever so complex issue Drawing on a wealth of theoretical and empirical work it presents the various models of available school twinning programs and explores the cultural political and economic factors that surround the recent enthusiasm regarding collaborative initiatives Moreover the book critically examines teachers and students experiences of web based school collaboration In particular it develops a realistic perspective of the range of challenges they face and identifies the host of technological and non technological issues that can shape participation in collaborative programs The Digital Hand, Vol 3 James W. Cortada, 2008 In The third volume of The Digital Hand James W Cortada completes his sweeping survey of the effect of computers on American industry turning finally to the public sector

and examining how computers have fundamentally changed the nature of work in government and education This book goes far beyond generalizations about the Information Age to the specifics of how industries have functioned now function and will function in the years to come Cortada combines detailed analysis with narrative history to provide a broad overview of computings and telecommunications role in the entire public sector including federal state and local governments and in K 12 and higher education Beginning in 1950 when commercial applications of digital technology began to appear Cortada examines the unique ways different public sector industries adopted new technologies showcasing the manner in which their innovative applications influenced other industries as well as the U S economy as a whole He builds on the surveys presented in the first volume of the series which examined sixteen manufacturing process transportation wholesale and retail industries and the second volume which examined over a dozen financial telecommunications media and entertainment industries With this third volume The Digital Hand trilogy is complete and forms the most comprehensive and rigorously researched history of computing in business since 1950 providing a detailed picture of what the infrastructure of the Information Age really looks like and how we got there Managers historians economists and those working in the public sector will appreciate Cortada s analysis of digital technology s many roles and future possibilities **Beyond Technology** David

Buckingham,2013-04-17 Beyond Technology offers a challenging new analysis of learning young people and digital media Disputing both utopian fantasies about the transformation of education and exaggerated fears about the corruption of childhood innocence it offers a level headed analysis of the impact of these new media on learning drawing on a wide range of critical research Buckingham argues that there is now a growing divide between the media rich world of childrens lives outside school and their experiences of technology in the classroom Bridging this divide he suggests will require more than superficial attempts to import technology into schools or to combine education with digital entertainment While debunking such fantasies of technological change Buckingham also provides a constructive alternative arguing that young people need to be equipped with a new form of digital literacy that is both critical and creative Beyond Technology will be essential reading for all students of the media or education as well as for teachers and other education professionals *International Handbook of Research in Arts Education* Liora Bresler,2007-09-04 Providing a distillation of knowledge in the various disciplines of arts education dance drama music literature and poetry and visual arts the Handbook synthesizes existing research literature helps define the past and contributes to shaping the substantive and methodological future of the respective and integrated disciplines of arts education While research can at times seem distant from practice the Handbook aims to maintain connection with the lived practice of art and of education capturing the vibrancy and best thinking in the field of theory and practice The Handbook is organized into 13 sections each centering on a major area or issue in arts education research These areas include History of arts education curriculum evaluation cultural centers appreciation composition informal learning child culture creativity the body spirituality and technology The individual chapters address

cross cultural research related to the central theme of the section from the perspectives of the particular arts discipline Interludes provide reflective thoughts on the theme

Preparing Teachers to Teach with Technology Charalambos Vrasidas, Gene V Glass, 2005-06-01 Teacher preparation programs in the United States and around the world have finally begun to address this deficiency in their programs The realization that technology is a powerful driving force in education coupled with a renewed emphasis on teacher preparation by governments have resulted in some dramatic changes in teacher preparation programs I believe that we have just begun to see changes in teacher preparation and that the pace of change will continue to accelerate This volume covers some of the more exciting developments in the field including the emergence of wireless computing in the classroom and the preparation of teachers in an online environment In short I am optimistic For those of you who are also in the field I think you will agree For those who are just entering the field this book is a great place to start as you change education Finally while this book is the last book of the three part series that we at CAIT conceptualized with Charalambos Vrasidas and Gene Glass it is also the beginning of a new relationship We are excited to join with a new partner CARDET to present this book Over many years in the education and R D field I have come to realize the value of partnerships and relationships I want to thank both Charalambos and Gene for making this series a reality and such a success We are looking forward to working with them and CARDET in the near future

The SAGE Handbook of Learning and Work Margaret Malloch, Len Cairns, Karen Evans, Bridget N. O'Connor, 2021-10-13 The first two decades of the 21st century have contributed a growing body of research theorisation and empirical studies on learning and work This Handbook takes the consideration of this topic into a new realm moving beyond the singular linking of identity learning and work to embrace a more holistic appreciation of learners and their life long learning Across 40 chapters learners learning and work are situated within educational organisational social economic and political contexts Taken together these contributions paint a picture of evolving perspectives of how scholars from around the world view developments in both theory and practice and map the shifts in learning and work over the past two decades Part 1 Theoretical perspectives of learning and work Part 2 Intersections of learning and work in organisations and beyond Part 3 Learning throughout working lives and beyond Part 4 Issues and challenges to learning and work

Classroom Communication and Diversity Robert G. Powell, Dana L. Powell, 2010-06-10 Classroom Communication and Diversity is an integral resource for teaching awareness of diversity issues and communication in the classroom Drawing on the research in the communication and education disciplines authors Robert G Powell and Dana Caseau provide theoretical models and useful strategies for improving instructional practices They address the ways in which culture influences communication in the classroom and assist teachers in developing the skills necessary to meet the needs of

the students in their classrooms New to the second edition is an expanded skills component additional teaching resources and an increased focus on the role of diversity in the classroom Much of the information shared in this text derives from the authors research and experience in schools and from the experiences of others including teachers parents and children Their experiences combined with the cross disciplinary approach produce a volume of unique perspectives and considerable insight

Education is Not Rocket Science David B. Zandvliet, 2006-01-01 The dominance of computer labs in our schools is the result of a long struggle among teachers and technicians for control of precious computer resources As technicians gain power and influence this is expressed in the row on row of machines installed in literally thousands of computer labs in schools around the world While labs are in some ways ideal for learning about technology or computer programming they somehow seem ill equipped to assist teachers with a lesson on language arts geography or for helping students conduct a scientific experiment As a result the huge investment in computers seems like so much wasted potential labs are not influencing teaching in the ways we had hoped for and in fact their use may even be harmful to students These observations are based on five years of experience as the director of a centre for educational technology at a leading Canadian university and on the results of three international studies I conducted in Australia Canada and Malaysia A reversal of the current techno trend would mean teachers would reclaim computers for their own classrooms and relegate the idea of the computer lab to the scrap heap of history As educators we need to discard the once size fits all strategy which computer labs imply about teachers instructional needs This is reinforced by the apparent failure of computers to transform teachers practice despite significant investments in computer technologies Some critics describe this as a management problem as computer labs reinforce top down ways of thinking about knowledge Unfortunately once such models are adopted undesirable uses of technology such as the computer lab become entrenched in a bureaucratic mindset limiting the effectiveness of these expensive tools to support teaching and learning

Emergent Practices and Material Conditions in Learning and Teaching with Technologies Teresa Cerratto Pargman, Isa Jahnke, 2019-03-21 This book explores the complexities of interacting with digital technologies in the everyday flow of practices in schools museums and the home In particular the authors pay attention to the material conditions of such practices via the exploration of media discourses on information and communication technologies in the classroom the ongoing digitization of the school the use of video chat for language learning the instantiation of CrossActionSpaces in an urban science classrooms the development of symbolic technologies such as the Carbon Footprint Calculator the design of apps and virtual museums for learning science the use of text message tools for collaborative learning in teacher education and the design implementation and evaluation of Augmented Reality apps in outdoor learning The book is grounded in case studies presented by scholars at the workshop Changing Teaching and Learning Practices in Schools with Tablet Mediated Collaborative Learning Nordic European and International Views and the workshop Emergent Practices and Material Conditions in Tablet mediated Collaborative Learning and Teaching both of

which have been held at the Computer Supported Collaborative Learning conference CSCL This volume brings together inspirational and high quality chapters that raise a range of important ideas and showcase the importance of looking beyond technology enhanced learning Taken together this volume unpacks a variety of everyday situations by engaging with what is really happening with digital technologies rather than what is expected to happen with them in educational settings The take away message is a call for research on learning teaching and digital technologies that enables engagement with the materiality of educational practices and in particular their constitutive relationships that configure the contemporary educational practices of the digital age
