Ovum Transport and Fertility Regulation Michael J. K. Harper, 1976-01-01
Regulation Task Force on Methods for the Regulation of Ovum Transport, 1976
Gediminas Grudzinskas, J. L. Yovich, 1995-07-28 This volume and its companion volume on the spermatozoon provide an authoritative and wide ranging account of the gametes and their reproductive role and function in humans Acknowledged authorities from around the world contribute a detailed and timely account of the oocyte The volume starts with an evolutionary perspective before focusing on the molecular and cellular biology of the oocyte and its structure and function The development and maturation of the oocyte is fully dealt with to include the endocrine and paracrine regulation of ovarian function Practical issues such as oocyte storage and ovarian stimulation are also fully covered The causes of female infertility are also an important theme The volume concludes with a thought provoking chapter on ethical considerations The volume will be an essential source of information for all clinicians and scientists with an interest in human reproduction

Prostaglandins and their Inhibitors in Clinical Obstetrics and Gynaecology M. Bygdeman, G. Berger, L.G. Keith, 2012-12-06
It is clear today that several prostaglandins play an important role in the regulation of many of the physiological events of the reproductive organs in the human Both naturally occurring prostaglandins and their analogues are used routinely in many countries to ripen the cervix and induce labour at term as well as to dilate the cervix and to terminate pregnancy Prostaglandin biosynthesis inhibitors are widely used in the treatment of primary dysmenorrhoea The editors have aimed at an accurate thorough yet easily understandable review of the status in 1986 of medical knowledge regarding both the physiological importance and the clinical use of prostaglandins and their inhibitors in obstetrics and gynaecology I believe this book will be of value for all clinicians concerned with reproductive health The list of authors guarantees an authoritative and up to date review of this active field SUNE BERGSTROM Karolinska Institutet Stockholm Sweden Table Examples of clinical use of natural prostaglandins and some prostaglandin analogues Indications Prostaglandin Route of administration Manufacturer Dilatation of the cervix prior to 15 methyl PGF Intramuscular Upjohn USA 2 to vacuum aspiration 16 phenoxy PGE methyl sulphonylamide Intramuscular Schering AG West Germany 2 16 16 dimethyl PGE methyl ester 1 Vaginal ONO Japan May ONO Japan PGF 20 Upjohn USA PGE Vaginal 2 Upjohn USA 15 methyl PGF 2

Microspheres: Medical and Biological Applications (1988) Alan Rembaum, Zoltan A. Tokes, 2017-11-22 We have previously described the syntheses of both magnetic and nonmagnetic polymeric microspheres and we have reported their application in removal of neuroblastoma cells from normal cells in bone marrow in the separation of red blood cells and the separation of human B and T lymphocytes In the present study we describe a series of hydrophilic microspheres consisting of 1 poly HEMA and 2 a copolymer sequence of HEMA acrolein microspheres
Handbook of Laboratory Animal Science Jann Hau, Per Svendsen, Steven J.

Schapiro,1994-06-02 This two volume set presents a comprehensive description of laboratory animal genetics diseases health monitoring nutrition and the environmental impact on animal testing It considers the ethics of animal experimentation through a complete review of European and North American legislation on the topic It discusses alternatives to animal experiments including the use of isolated organs cell cultures and computer simulations The book also examines general methods including experimental design and statistical evaluation non surgical and surgical techniques anesthesia and post mortem examinations Reviews of animal models for studying diseases of different organ systems infectious diseases cancer and toxicology are featured as well Embryonic Mortality in Farm Animals J.M. Sreenan,M.G. Diskin,2012-12-06

Reproductive wastage is a major inefficiency in all livestock production with embryonic mortality accounting for a major portion of this loss Accordingly the Commission of the European Communities encouraged the organisation of a seminar on embryonic mortality in farm animals which was held in Brussels on the 11th and 12th of December 1984 This book contains the text of the papers discussions and final summary presented at that Seminar As a background to the Seminar the extent and timing of embryonic loss was described for farm animals Particular consideration was then given to the various mechanisms and signals both embryonic and uterine in origin that are so far known to be involved in the establishment of pregnancy Possible causes of embryonic death including physiological endocrinological genetic and immunological components were outlined and discussed The final summary contains general conclusions from the Seminar and recommendations for future research work on this topic J M Sreenan M G Diskin July 1985 THE EXTENT AND TIMING OF EMBRYONIC MORTALITY IN THE COW J M Sreenan M G Diskin The Agricultural Institute Belclare Tuam Galway Ireland ABSTRACT The extent and timing of embryonic mortality in heifers normal cows and repeat breeder cows has been reviewed

Ovum Transport and Fertility Regulation ,1976 Proteins and Steroids in Early Pregnancy H.M. Beier,P.

Karlson,2012-12-06 It is about 15 years since the first presentation on uteroglobin was given to a group of developmental biologists reproductive physiologists and geneticists who had gathered in November 1966 at Konstanz Germany In the following decade so much knowledge was accumulated that a special symposium seemed appropriate This was organized as a satellite symposium to the International Congress of Endocrinology at Hamburg and brought together 50 scientists at Aachen These scientists working in the field of proteins and steroids in early pregnancy recognized the impact of what had been reported and many of them later agreed to contribute to this book and thus to present their research data available until December 1980 The present volume covers a relatively broad spectrum of data and observations which shed some light on preimplantational embryonic life and on the supports and obstacles provided by the maternal organism with respect to final accomplishment of normal implantation and establishment of pregnancy The book will serve both as a textbook and as a scientific dictionary for Ph D students postdoctoral fellows and advanced scientists working in this area The course of early pregnancy depends very much on a proper balance of steroid hormones and the induction of protein synthesis by steroid

hormones is one of the well known fundamental processes in cellular differentiation and embryonic development **Uterine and Embryonic Factors in Early Pregnancy** Jerome F. Strauss III, C. Richard Lyttle, 2012-12-06 Human reproduction is the most dynamic of processes The events which lead to the birth of a normal healthy infant have their origin long before actual fertilization Indeed the whole process can be looked upon as a continuum Human fertilization and early development once sequestered in the protective environment of the fallopian tubes and uterus have now been exposed in the laboratory These events have over time been extensively observed and catalogued in animal models The tools of modern morphology and molecular biology have reopened issues long since considered settled as facets of early reproduction are reexplored This volume consisting of the proceedings of a workshop on uterine and embryonic factors in early pregnancy has been designed to enhance that effort Attention is focused largely on early embryonal development with special attention to the interrelationship between the embryo and the uterus in early pregnancy Each of the contributing scientists brings with him or her the perspective of one specific discipline or another The common denominator is the application of emerging techniques in modern molecular biology to problems pertaining to embryonal uterine interaction The goal is to consider specific areas of concern in a multidisciplinary way and to reexplore the factors behind early development and implantation Uterine complement the function of uterine macrophages immunoregulatory loops in the peri implantation period colony stimulating factors and interferon like factors are reviewed and their interrelationship explored Uterine angiogenesis factors as well as embryonic growth factors are also considered *New Horizons in Reproductive Medicine* C. Coutifaris, L. Mastroianni, 1997-08-15 This is an extensively detailed comprehensive clinical reference text dealing with every aspect of reproductive medicine and science in 77 major contributions by today's leading international authorities The book covers an immense range of subjects including sexually transmitted diseases male and female contraception endometriosis the menopause assisted reproduction pediatric and adolescent reproductive medicine normal and abnormal pregnancy endoscopy and advanced surgical procedures IVF procedures GnRH LHRH FSH genetics neuroactive peptides and steroids and chromosomal abnormalities The book contains a unique fund of up to date reference lists covering every area of reproductive medicine and science are more extensive and is fully indexed Main Sections Social ethical issues and an agenda for the future Sexually transmitted diseases Issues in contraception Gonadotropins and neurohormones The polycystic ovary The fallopian tube Assisted reproduction technology Management of male infertility Pediatric and adolescent reproductive medicine Genetics and reproduction Recurrent pregnancy loss and basic mechanisms underlying preeclampsia and endometriosis The menopause Endoscopy and reproductive medicine Index **Research Awards Index**, 1983 The Fallopian Tubes Ronald H.F. Hunter, 2012-12-06 This monograph has been written in the hope that it will prove of value to medical students and clinicians to Honours undergraduates in appropriate branches of the natural sciences and to reproductive biologists in general It would be pleasing if the text also caught the attention of veterinary undergraduates since

there is much information bearing on reproduction in domestic animals First and foremost however the intended audience is a medical one for scientific studies of human reproduction have been catalyzed by the intense interest in procedures of fertilization in vitro Some would judge that this very activity has narrowed our view of physiological events occurring within the Fallopian tubes The present work may therefore serve as a useful counterbalance to the overwhelming series of publications on procedures of in vitro fertilization and offer opportunities to those in the clinical field for extending their knowledge of the scientific background to much of the current work

Marshall's Physiology of Reproduction G.E. Lamming, 2013-04-17 The most comprehensive review available today Marshall's Physiology of Reproduction is the classic reference source for teachers and researchers of animal reproduction Internationally recognised leaders in their respective fields provide an analytical synopsis of the area review current research and outline their philosophical approach to the subject Volume 3 of the fourth edition reviews the processes of pregnancy and lactation in mammals incorporating marsupials non primate eutherians and primates including man Book one covers pregnancy from ovulation to pre parturition book two reviews fetal physiology parturition and lactation The extensive coverage of the physiology of human reproduction and lactation makes this volume a particularly important reference source for researchers in human fertility control while the review of large animal reproduction is relevant to veterinary and para veterinary workers

Implantation and Early Pregnancy in Humans E.R. Barnea, J.H. Check, 1993-11-15 Over the last two decades major advances in ovulation induction and assisted reproductive technologies have been made and now in the 1990s the aim is to concentrate talent and efforts on the next obvious step achieving a high rate of successful full term pregnancies by concentrating on implantation and early pregnancy Investigating and surmounting the disorders associated with this critical period are the major hurdles which through research and clinical efforts must be overcome in order to achieve this goal
