18 Unconventional Essays on the Nature of Mathematics Reuben Hersh, 2006-01-16 This book comes from the Internet Browsing the Web I stumbled on philosophers cognitive scientists sociologists computer scientists even mathematicians saying original provocative things about mathematics And many of these people had probably never heard of each other So I have collected them here This way they can read each other's work I also bring back a few provocative oldies that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormond Quine The great exception was *Proofs and Refutations* by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled *Introducing Imre Lakatos in the Mathematical Intelligencer* in 1978 *Repton School [Lists], 1854-1869*, 1870

Reading Mathematics in Early Modern Europe Philip Beeley, Yelda Nasifoglu, Benjamin Wardhaugh, 2020-10-20 Libraries and archives contain many thousands of early modern mathematical books of which almost equally many bear readers marks ranging from deliberate annotations and accidental blots to corrections and underlinings Such evidence provides us with the material and intellectual tools for exploring the nature of mathematical reading and the ways in which mathematics was disseminated and assimilated across different social milieus in the early centuries of print culture Other evidence is important too as the case studies collected in the volume document Scholarly correspondence can help us understand the motives and difficulties in producing new printed texts library catalogues can illuminate collection practices

while manuscripts can teach us more about textual traditions By defining and illuminating the distinctive world of early modern mathematical reading the volume seeks to close the gap between the history of mathematics as a history of texts and history of mathematics as part of the broader history of human culture **The Literary Gazette** ,1860 **Questions and exercises in elementary mathematics** Palaestra Oxoniensis,1884 **The G. H. Hardy Reader** Donald J. Albers,Gerald L. Alexanderson,William Dunham,Mathematical Association of America,2016-04-11 G H Hardy ranks among the greatest twentieth century mathematicians This book introduces this extraordinary individual and his writing *Philosophy of Mathematics* David Bostock,2009-03-09 Philosophy of Mathematics An Introduction provides a critical analysis of the major philosophical issues and viewpoints in the concepts and methods of mathematics from antiquity to the modern era Offers beginning readers a critical appraisal of philosophical viewpoints throughout history Gives a separate chapter to predicativism which is often but wrongly treated as if it were a part of logicism Provides readers with a non partisan discussion until the final chapter which gives the author s personal opinion on where the truth lies Designed to be accessible to both undergraduates and graduate students and at the same time to be of interest to professionals *Parliamentary Papers* Great Britain. Parliament. House of Commons,1903 **Calendar** University of Aberdeen,1915 **Expositions on the Book of Psalms** Saint Augustine (Bishop of Hippo.),1857 *Schools Inquiry Commission* ,1869 **Schools Inquiry Commission: Report of the commissioners** Great Britain. that in his view although it is philosophy that came up with the concept of beings which he calls forms and highlighted their importance first to natural philosophy and then to ethics the things that do qualify as beings are inchoately revealed by mathematics as the raw materials that must be further processed by philosophy mathematicians to use Plato's simile in the Euthedemus do not invent the theorems they prove but discover beings and like hunters who must hand over what they catch to chefs if it is going to turn into something useful they must hand over their discoveries to philosophers Even those forms that do not bear names of mathematical objects such as the famous forms of beauty and goodness are in fact forms of mathematical objects The first chapter is an attempt to defend this thesis The second argues that for Plato philosophy's crucial task of investigating the exfoliation of the forms into the sensible world including the sphere of human private and public life is already foreshadowed in one of its branches astronomy
