N. Cantor, 2005-09-22 This study examines how two minorities the Quaker and Anglo Jewish communities engaged with the sciences With their roots in the mid seventeenth century both communities maintained their religious and social norms throughout the eighteenth and nineteenth centuries while standing outside the hegemony of the Anglican Church and being subject to various forms of discrimination Yet for both Quakers and Jews science offered educational and career opportunities and participation in the wider society They adopted their own scientific interests with Quakers being attracted principally to the observational sciences Drawing on a wealth of documentary material much of which has not been analysed by previous historians Geoffrey Cantor charts the involvement of Quakers and Jews in many different aspects of science scientific research science education science related careers and scientific institutions ranging from the Royal Society to the Great Exhibition BOOK JACKET **The Saturday Review of Politics, Literature, Science and Art** ,1906 **Saturday Review of Politics, Literature, Science and Art** ,1860 *Philosophy of Science* Alex Rosenberg, 2011-02-10 Any serious student attempting to better understand the nature methods and justification of science will value the third edition of this popular text Weaving together lucid explanations and clear analyses the volume is a much used thematically oriented introduction to the philosophy of science Called the industry standard and essential reading by the journal Teaching Philosophy the book has been substantially revised and updated in its third edition to meet even better the needs of students and instructors and to reflect changes in the field *Heroes of Science: Physicists* William Garnett, 2019-12-03 In Heroes of Science Physicists William Garnett embarks on a compelling exploration of the luminaries who have shaped the field of physics Employing a blend of accessible prose and scholarly depth Garnett delineates the monumental contributions of physicists throughout history from classical giants like Newton to contemporary pioneers The book not only recounts significant scientific milestones but also situates them within the evolving cultural and intellectual context thereby illustrating how these figures transcended their

Heroes of Science William Garnett, 2020-07-21
Reproduction of the original *Heroes of Science* by William Garnett **God and Natural Order** Shaun C. Henson, 2013-12-04 In *God and Natural Order* Physics Philosophy and Theology Shaun Henson brings a theological approach to bear on contemporary scientific and philosophical debates on the ordered or disordered nature of the universe Henson engages arguments for a unified theory of the laws of nature a concept with monotheistic metaphysical and theological leanings alongside the pluralistic viewpoints set out by Nancy Cartwright and other philosophers of science who contend that the nature of physical reality is intrinsically complex and irreducible to a single unifying theory Drawing on the work of theologian Wolfhart Pannenberg and his conception of the Trinitarian Christian god the author argues that a theological line of inquiry can provide a useful framework for examining controversies in physics and the philosophy of science *God and Natural Order* will raise provocative questions for theologians Pannenberg scholars and researchers working in the intersection of science and religion **Report of the commissioners** Schools inquiry commission, 1869

Report of the Commissioners ...: ... Special reports of assistant commissioners, and digests of information received Great Britain. Schools inquiry commission, 1869 The Journal of Education, 1908 **ulula**, 1876 **Writing about Lives in Science** Paola Govoni, Zelda Alice Franceschi, 2014 Following discussions on scientific biography carried out over the past few decades this book proposes a kaleidoscopic survey of the uses of biography as a tool to understand science and its context The authors belong to a variety of academic and professional fields including the history of science anthropology literary studies and science journalism The period covered spans from 1732 when Laura Bassi was the first woman to get a tenured professorship of physics to 2009 when Elizabeth H Blackburn and Carol W Greider were the first women's team to have won a Nobel Prize in science **Neo-Aristotelian Perspectives on Contemporary Science** William M.R. Simpson, Robert C. Koons, Nicholas J. Teh, 2017-10-19 The last two decades have seen two significant trends emerging within the philosophy of science the rapid development and focus on the philosophy of the specialised sciences and a resurgence of Aristotelian metaphysics much of which is concerned with the possibility of emergence as well as the ontological status and

indispensability of dispositions and powers in science Despite these recent trends few Aristotelian metaphysicians have engaged directly with the philosophy of the specialised sciences Additionally the relationship between fundamental Aristotelian concepts such ashylomorphism substance and faculties and contemporary science has yet to receive a critical and systematic treatment Neo Aristotelian Perspectives on Contemporary Science aims to fill this gap in the literature by bringing together essays on the relationship between Aristotelianism and science that cut across interdisciplinary boundaries The chapters in this volume are divided into two main sections covering the philosophy of physics and the philosophy of the life sciences Featuring original contributions from distinguished and early career scholars this book will be of interest to specialists in analytical metaphysics and the philosophy of science The Literature of Soil Science Peter McDonald,1994 A collection of 14 discussions of the past and present literature about soil science The topics include a historical survey bibliometrics introduction into developing countries societies and their publishing influence information systems core monographs primary journals maps and other aspec Annals of Shrewsbury School George William Fisher,1899 Ladies in the Laboratory? American and British Women in Science, 1800-1900 Mary R.S. Creese,2000-01-01 A systematic survey and comparison of the work of 19th century American and British women in scientific research this book covers the two countries in which women of the period were most active in scientific work and examines all the fields in which they were engaged The field by field examination brings out patterns and concentrations in women s research in both countries and allows a systematic comparison of the two national groups Through this comparison new insights are provided into how the national patterns developed and what they meant in terms of both the process of women s entry into research and the contributions they made there Ladies in the Laboratory features a specialized bibliography of nineteenth century research journal publications by women created from the London Royal Society s Catalogue of Scientific Papers 1800 1900 In addition 23 illustrations present in condensed form information about American and British women s scientific publications throughout the nineteenth century This well organized blend of individual life stories and quantitative information presents a great deal of new data and field by field analysis its broad and methodical coverage will make it a basic work for everyone interested in the story of women s participation in nineteenth century science
