Thomas,2008 Pollution is undesirable state of the natural environment being contaminated with harmful substances as a consequence of human activities so that the environment becomes harmful or unfit for living things especially applicable to the contamination of soil water or the atmosphere by the discharge of harmful substances In addition to the harm to living beings both present or future and known or unknown pollution cleanup and surveillance are enormous financial drains of the economies of the world This book focuses on issues and developments critical for the field      *EPA's Rule on Paints and Coatings* United States. Congress. House. Committee on Science. Subcommittee on Energy and Environment,1998      *Air Pollution XXIV* J.W.S. Longhurst,C.A. Brebbia,J. Barnes,2016-07-14 In these proceedings of the 24th International Conference on Modelling Monitoring and Management of Air Pollution international academics and air pollution practitioners contribute to the evolving understanding of the science and policy contexts of air pollution All the books from the conference series have discussed important air pollution issues at an international national and local level and by virtue of their truly international composition have brought to the discussion a unique suite of perspectives The conference findings enjoy a wide and rapid dissemination amongst the air pollution science and policy communities The management of air pollution is one of the most challenging problems facing the international community A particular strength of the series has been the attention given to regulatory and market solutions to air pollution management The Air Pollution series of conferences has consistently acknowledged that science remains the key to identifying the nature and scale of air pollution impacts and reaffirmed that science is essential in the formulation of policy relevant information for regulatory decision making The conference series also acknowledged at a very early stage that science alone will not improve a polluted atmosphere The scientific knowledge derived from well designed studies needs to be allied with further technical and economic studies in order to ensure cost effective and efficient mitigation In turn the science technology and economic outcomes are necessary but not sufficient Topics covered include Air pollution modelling Air pollution mitigation and management Aerosols and particles Emission studies Health effects Indoor air pollution Air data quality Monitoring and measuring Case studies Air pollution control technologies Industrial air pollution Air pollution science Global and regional studies Climate change effects GIS Emerging pollutants Socio economic issues Public engagement Policy and legislation      *No Standard Oil* Deborah Godon,2021-10-22 In *No Standard Oil* environmental policy expert Deborah Gordon examines the widely varying climate impacts of global oils and gases and proposes solutions to cut greenhouse gas emissions in this sector while making sustainable progress in transitioning to a carbon free energy future

The next decade will be decisive in the fight against climate change. It will be impossible to hold the planet to a 1.5°C temperature rise without controlling methane and CO<sub>2</sub> emissions from the oil and gas sector. Contrary to popular belief, the world will not run out of these resources anytime soon. Consumers will continue to demand these abundant resources to fuel their cars, heat their homes, and produce everyday goods like shampoo, pajamas, and paint. But it is becoming more environmentally damaging to supply energy using technologies like fracking oil and liquefying gas. Policymakers, financial investors, environmental advocates, and citizens need to understand what oil and gas are doing to our climate to inform decision making. In *No Standard Oil*, Deborah Gordon shows that no two oils or gases are environmentally alike. Each has a distinct quantifiable climate impact. While all oils and gases pollute, some are much worse for the climate than others. In clear, accessible language, Gordon explains the results of the Oil Climate Index Plus Gas (OCI), an innovative open source model that estimates global oil and gas emissions. Gordon identifies the oils and gases from every region of the globe, along with the specific production, processing, and refining activities that are the most harmful to the planet, and proposes innovative solutions to reduce their climate footprints. Global climate stabilization cannot afford to wait for oil and gas to run out. *No Standard Oil* shows how we can take immediate, practical steps to cut greenhouse gas emissions in the crucial oil and gas sector while making sustainable progress in transitioning to a carbon-free energy future.

**The Precautionary Principle in the 20th Century** Paul Harremoës, David Gee, Malcom MacGarvin, Andy Stirling, Jane Keys, Brian Wynne, Sofia Guedes Vaz, 2013-10-11. The precautionary principle is widely seen as fundamental to successful policies for sustainability. It has been cited in international courts and trade disputes between the USA and the EU and invoked in a growing range of political debates. Understanding what it can and cannot achieve is therefore crucial. This volume looks back over the last century to examine the role the principle played or could have played in a range of major and avoidable public disasters. From detailed investigation of how each disaster unfolded, what the impacts were, and what measures were adopted, the authors draw lessons and establish criteria that could help to minimise the health and environmental risks of future technological, economic, and policy innovations. This is an informative resource for all those from lawyers and policy makers to researchers and students needing to understand or apply the principle.
