P-Functions and Boolean Matrix Factorization A. Thayse, 2014-01-15 *P-functions and Boolean Matrix Factorization* André Thayse, 1984 P-FUNCTIONS AND BOOLEAN MATRIX FACTORIZATION Andre' Thayse, 1984 **An Introduction to Semi-tensor Product of Matrices and Its Applications** Dai-Zhan Cheng, Yin Zhao, 2012 A generalization of Conventional Matrix Product CMP called the Semi Tensor Product STP is proposed It extends the CMP to two arbitrary matrices and maintains all fundamental properties of CMP In addition it has a pseudo commutative property which makes it more superior to CMP The STP was proposed by the authors to deal with higher dimensional data as well as multilinear mappings After over a decade of development STP has been proven to be a powerful tool in dealing with nonlinear and logical calculations This book is a comprehensive introduction to the theory of STP and its various applications including logical function fuzzy control Boolean networks analysis and control of nonlinear systems amongst others **Petri Nets: Central Models and Their Properties** Wilfried Brauer, Wolfgang Reisig, Grzegorz Rozenberg, 2006-04-11 Petri Nets represent a long and sustained effort to develop concepts theories and tools to aid in design and analysis of concurrent systems They are used in many areas of computer science including software engineering data base and in formation systems computer architecture and operating systems communication protocols and computer networks process control and socio technical systems such as office communication and man machine interaction Quite substantial theory has been developed for Petri Nets It reflects all major problem areas of concurrent distributed systems and covers many successfully applied principles and analysis techniques for systems organisation Since the time that C A Petri has presented his original ideas a rich body of knowledge has been developed a recent bibliography in *Advances in Petri Nets* 1981 includes more than 2000 entries Already in 1979 an Advanced Course on Petri Nets was organized in Hamburg West Germany aiming at systematizing the existing knowledge and making it well accessible to a wide audience of computer scientists interested in theory and applications of concurrent systems This course has turned out to be successful in the sense that it has initiated a lot of new research into applications and theory of Petri Nets This had led to another Advanced Course in 1986 in Bad Honnef West Germany where during two weeks more than 30 lectures were presented covering the most important current developments in the area of Petri Nets **Magnetic Resonance Angiography** I.P. Arlart, G.M. Bongartz, G. Marchal, 2002-09-12 In this completely revised second edition internationally acknowledged experts discuss the principles and technical aspects of MR angiography its diverse clinical applications and its advantages and limitations A large number of typical MR angiograms are presented suitable protocols are described and comparison is made with other vascular imaging techniques Chapters focus on image display techniques blood flow quantification hardware configurations and the limitations and artifacts of MR angiography Suitable examination protocols for different vascular regions and lesions are described to facilitate correct application of the technique Systematic comparison is made with other vascular imaging techniques *Computation Theory*

Jantke, 1986-06-01 **A Hierarchical Associative Processing System** Heinrich J. Stüttgen, 1985-07 *Lie Groups and Lie Algebras I* V.V. Gorbatsevich, E.B. Vinberg, 1996-12-18 From the reviews the book must be of great help for a researcher who already has some idea of Lie theory wants to employ it in his everyday research and or teaching and needs a source for customary reference on the subject From my viewpoint the volume is perfectly fit to serve as such a source On the whole it is quite a pleasure after making yourself comfortable in that favourite office armchair of yours just to keep the volume gently in your hands and browse it slowly and thoughtfully and after all what more on Earth can one expect of any book The New Zealand Mathematical Society Newsletter *Unobstructed Shortest Paths in Polyhedral Environments* Varol Akman, 1987-03-11 The first examination of the cervical spine is always made using standard radiographs and often enough this suffices as a basis for diagnosis Malformations tumours and more frequently traumas rheumatism and even ordinary neck pain require radiological examination of the spine Interpretation however is difficult Take a cervical vertebra in your hand and you will see that it is complex enough itself In radiology the overlapping pieces of bone summation phenomena and the diversity of viewing angles complicate interpretation of the images still further The book by J F Bonneville and F Cattin suggests an original method of reading the radiographs strict but very attractive which considerably simplifies the interpretation of images of the cervical spine This book shows that two or threedimensional computed tomograms accompany standard radiographs as an excellent aid to comprehension It is as though the reader had access to each part of the bony anatomy shown in the radiographs and from then on everything becomes easy superimpositions disappear traps become visible anatomy triumphs the image lives Logic Programming '86 Eiji Wada, 1987-06-03 This volume contains the papers presented and subsequently submitted for publication at the 5th Logic Programming Conference held June 23 26 1986 in Tokyo Topics covered include Prolog machine architecture Prolog processors variations of Prolog language and applications of Prolog to natural language understanding and expert systems Most of the works reported in the volume are related to the Japanese Fifth Generation Computer Project allowing readers to compare results from this project with those from similar projects currently being conducted in other countries **Bull. Math. Soc. Sc. Math. Roumanie**, 1991 *WOPLOT 86 Parallel Processing: Logic, Organization, and Technology* Jörg D. Becker, Ignaz Eisele, 1987 WOPLOT 86 Workshop on Parallel Processing Logic Organization and Technology gathered together experts from various fields for a broad overview of current trends in parallel processing There are contributions from logic e.g the connection between time and logic or non monotonic reasoning from organizational structure theory of great importance for pyramid architecture and structure representation from intrinsic parallelism and problem classification from developments in future technologies 3 D Silicon technology molecular electronics and from various applications pattern storage in adaptive memories simulation of physical

systems The proceedings show clearly that progress in parallel processing is an interdisciplinary goal they present a cross section of the state of the art as well as of future trends Furthermore some contributions in particular those from logic and organization deserve a broader interest also outside the field of parallel processing

Database Machine Performance: Modeling Methodologies and Evaluation Strategies Francesca Cesarini, Silvio Salza, 1987-06-24 This book is focused on the performance evaluation of database machines i.e. special purpose architectures specifically meant to improve the efficiency of database applications The topic is of primary interest because of the need to compare these systems among themselves and with traditional database management systems The book gathers the experience of several European research groups in modeling and analyzing the database machine architectures they have proposed It deals both with the main methodological issues and with the detailed analysis of some relevant problems It also includes an extensive annotated bibliography with more than one hundred references and several keys for the access to the literature

Graph-Theoretic Concepts in Computer Science Gottfried Tinhofer, Gunther Schmidt, 1987 Graph theoretic concepts are developed by computer scientists in order to model algorithms nets rewriting systems distributed systems parallelism geometric and layout concepts Their complexity is studied under various randomness assumptions This volume contains contributions to the twelfth of a series of annual workshops designed to bring together researchers using graph theoretic methods Its purpose is to broadcast emerging new developments from and to a diversity of application fields The topics covered include Graph Grammars Graph Manipulation Nets Complexity Issues Algorithmic and Network Considerations Outerplanar Graphs Graph Isomorphism Parallelism and Distributed Systems Graphs and Geometry Randomness Considerations Applications in Chemistry Specific Algorithms N

CAAP'86 Paul Franchi-Zannettacci, 1986-03 Intelligent Distributed Computing VIII David Camacho, Lars Braubach, Salvatore Venturino, Costin Badica, 2014-09-02 This book represents the combined peer reviewed proceedings of the Eight International Symposium on Intelligent Distributed Computing IDC 2014 of the Workshop on Cyber Security and Resilience of Large Scale Systems WSRL 2014 and of the Sixth International Workshop on Multi Agent Systems Technology and Semantics MASTS 2014 All the events were held in Madrid Spain during September 3-5 2014 The 47 contributions published in this book address several topics related to theory and applications of the intelligent distributed computing and multi agent systems including agent based data processing ambient intelligence collaborative systems cryptography and security distributed algorithms grid and cloud computing information extraction knowledge management big data and ontologies social networks swarm intelligence or videogames amongst others

Automata, Languages and Programming Thomas Ottmann, 1987-07-08 This volume contains the proceedings of the 14th International Colloquium on Automata Languages and Programming organized by the European Association for Theoretical Computer Science EATCS and held in Karlsruhe July 13-17 1987 The papers report on original research in theoretical computer science and cover topics such as algorithms and data structures automata and formal languages computability and complexity theory semantics of

programming languages program specification transformation and verification theory of data bases logic programming theory of logical design and layout parallel and distributed computation theory of concurrency symbolic and algebraic computation term rewriting systems cryptography and theory of robotics The authors are young scientists and leading experts in these areas **A Study in String Processing Languages** Paul Klint, 1985-11
