Steiner, Louise Garone, 1991 The book is concerned with the application of physical techniques to the study of the structure and interactions of biopolymers The treatment is confined to those procedures applicable to solutions The material has been tested on students in actual classes thereby permitting the elimination of ambiguities and potential points of difficulty Stress has been placed upon lucidity of treatment and difficult steps in derivations have been explained The mathematical exposition has been made as clear and simple as feasible Examples of actual data are given **Laser Applications in Physical Chemistry** D.K. Evans, 2020-11-26 This book provides an introduction on applications of lasers in Chemistry It describes laser as a tool for chemistry the consideration involved in

describing a laser beam and what happens to beam as it is propagated through a gas The book is useful for graduates and advanced undergraduates Physical Chemistry of Fast Reactions B. Levitt, 2012-12-06 The chapters in this book are devoted to the elementary reactions of small molecules in the gas phase with some emphasis on reactions important in combustion The first three chapters cover experimental measurements made at high temperatures mainly using shock waves and flames the final chapter describes discharge flow methods near room temperature The authors all active in the fields they describe were asked to aim at a level intermediate between a textbook and a review designed for readers not already familiar with this branch of chemical kinetics We hope the book will prove especially useful to research workers in related subjects to research students and perhaps as source material for the preparation of lectures The examples have been chosen to illustrate the theoretical basis of the topics rather than attempt a complete coverage Professors Wagner and Troe describe the remarkable progress made in recent years in measuring dissociation rates for small molecules Tests of unimolecular reaction theories are usually made in the fall off region of pressure the kinetics change from first order to second order as the pressure is reduced For large molecules this region lies below atmospheric pressure and is relatively easily accessible For molecules with four or less atoms however the fall off region lies well above atmospheric pressure it has been explored using the high pressure shock tube techniques developed by the authors
