Great Myths of the Brain Christian Jarrett, 2014-11-17 Great Myths of the Brain introduces readers to the field of neuroscience by examining popular myths about the human brain Explores commonly held myths of the brain through the lens of scientific research backing up claims with studies and other evidence from the literature Looks at enduring myths such as Do we only use 10% of our brain Pregnant women lose their mind Right brained people are more creative and many more Delves into myths relating to specific brain disorders including epilepsy autism dementia and others Written engagingly and accessibly for students and lay readers alike providing a unique introduction to the study of the brain Teaches readers how to spot neuro hype and neuro nonsense claims in the media Children of the French Empire Owen White, 1999-11-25

This book vividly recreates the lives of the children born of relationships between French men and African women from the time France colonized much of West Africa towards the end of the nineteenth century until independence in 1960 Set within the context of the history of miscegenation in colonial French West Africa the study focuses upon the lives and identities of the resulting mixed race or m tis population and their struggle to overcome the handicaps they faced in a racially divided society Owen White has drawn a valuable evaluation of the impact and importance of French racial theories and offers a critical discussion of colonial policies in such areas as citizenship and education providing original insights into problems of

identity in colonial society **Critical Philosophy of Race** Robert Bernasconi, 2023 The fifteen essays by distinguished philosopher of race Robert Bernasconi that are collected here demonstrate why the critical philosophy of race needs to take a historical turn Genealogies of the concepts of both race and racism clarify why some of the dominant strategies for combatting racism tend to be ineffective For example the Boasian UNESCO strategy that highlights biology's rejection of race neglects cultural racism Drawing on the work of Frantz Fanon the late Sartre and Michel Foucault Robert Bernasconi argues for a holistic approach that integrates the concrete experience of racism faced by individuals into the study of institutional structural and systemic racism His philosophical studies of such Black philosophers as Ottobah Cugoana Antenor Firmin and W E B Du Bois contribute to challenging the dominant philosophical canon This volume will be an essential resource for scholars and students interested in this resurgent topic *Encyclopedia of Disability* Gary L Albrecht, 2006 Presents current knowledge of and experience with disability across a wide variety of places conditions and cultures to both the general reader and the specialist *Aphasia and Related Neurogenic Communication Disorders* Papathanasiou, Patrick Coppens, 2016-02-11 Aphasia and Related Neurogenic Communication Disorders Second Edition reviews the definition terminology classification symptoms and neurology of aphasia including the theories of plasticity and recovery Best practices of aphasia assessment and intervention are presented including neuropsychological models and formal and informal testing procedures to maximize correct clinical rehabilitative decisions Theoretical bases for rehabilitation guidelines for organization and delivery of evidence based therapy as well as augmentative and alternative communication therapy and computer based treatments are also presented **Racial Science and Human Diversity in Colonial Indonesia** Fenneke Sysling, 2016-07-15 Indonesia is home to diverse peoples who differ from one another in terms of physical appearance as well as social and cultural practices The way such matters are understood is partly rooted in ideas developed by racial scientists working in the Netherlands Indies beginning in the late nineteenth century who tried to develop systematic ways to define and identify distinctive races Their work helped spread the idea that race had a scientific basis in anthropometry and craniology and was central to people's identity but their encounters in the archipelago also challenged their ideas about race In this new monograph Fenneke Sysling draws on published works and private papers to describe the way Dutch racial scientists tried to make sense of the human diversity in the Indonesian archipelago The making of racial knowledge it contends cannot be explained solely in terms of internal European intellectual developments It was on the ground that ideas about race were made and unmade with a set of knowledge strategies that did not always combine well Sysling describes how skulls were assembled through the colonial infrastructure how measuring sessions were resisted what role photography and plaster casting played in racial science and shows how these aspects of science in practice were entangled with the Dutch colonial Empire **A Cultural History of Medicine in the Age of Empire** Jonathan Reinarz, 2023-02-09 Historians describe the long 19th century as an age of empire characterized by expansion and industrialization The period witnessed

the evolution of Western medicine into something uniquely modern rooted in the shift to industrial capitalism and encroachment of government monitoring to state health as well as the colonial mindset that drove overseas travel and encounters with unfamiliar populations climates and disease More than ever before food drugs people and sickness circumvented the globe crossing borders and prompting enormous changes in the way people made sense of health and illness Novel technologies from vaccination to x rays and ways of organizing medicine and its delivery increased the reach of medicine and augmented the power of the state and colonizers Equally the new medicine answered governments growing recognition that health had acquired cultural value and meaning for their domestic populations Spanning the period from 1800 to 1920 this volume surveys the spatial experiential visual and material cultures that shaped authority mind and body disease theories and the growing integration of human and animal health These essays focus on the centrality of the state and hospitals the growing importance of controlled laboratory experimentation statistical methods medical specialization as well as the impact of war and peace on sick and injured bodies marked by notions of gender race and class While documenting the rise of new medical paradigms this volume also charts the ways in which patients and populations have mediated contested and shaped medical encounters as well as the meanings of health and illness Together these chapters map the contours of recent trends and trajectories in the cultural history of medicine and set an agenda for the self reflexive critique of medicine s past in the future

The Great Nation in Decline Professor Sean M Quinlan,2013-06-28 This book studies how doctors responded to and helped shape deep seated fears about nervous degeneracy and population decline in France between 1750 and 1850 It uncovers a rich and far ranging medical debate in which four generations of hygiene activists used biomedical science to transform the self sexuality and community in order to regenerate a sick and decaying nation a programme doctors labelled physical and moral hygiene Moreover it is shown how doctors imparted biomedical ideas and language that allowed lay people to make sense of often bewildering socio political changes thereby giving them a sense of agency and control over these events Combining a chronological and thematic approach the six chapters in this book trace how doctors began their medical crusade during the middle of the Enlightenment how this activism flowered during the French Revolution and how they then revised their views during the period of post revolutionary reaction The study concludes by arguing that medicine acquired an unprecedented political social and cultural position in French society with doctors becoming the primary spokesmen for bourgeois values and thus helped to define the new world that emerged from the post revolutionary period

Connectionist Approaches To Clinical Problems in Speech and Language Raymond G. Daniloff,2001-08-01 Connectionist accounts of language acquisition processing and dissolution proliferate despite attacks from some linguists cognitive scientists and engineers Although the networks of exquisitely interconnected perceptrons postulated by PDP theorists may not be anatomically homologous with actual brain anatomy a growing body of research suggests that the posited network functions can support many human behaviors This volume brings together contributors

with a variety of backgrounds and perspectives to explore for the first time the clinical implications of whole language connectionist models Demonstrating that these models are powerful and have explained many phenomena of language acquisition language therapy and speech processing especially at the engineering level they focus specifically on applications of connectionist theory to delayed language aphasia phonological acquisition and speech perception Connectionist models they conclude offer a new interpretive framework for the discussion of information processing in humans and other animals that will be of great utility to all those who study language and seek to intervene in language disorders **Psychiatry**
