Preventing Family Violence:

Family Violence Robert L. Hampton,1999-01-01 The first edition of this book was also the first volume in the Issues in Children s and Families Lives book series Like the others in the series this volume is devoted to issues affecting children and their families The decision to devote the first volume to family violence was made because it was recognized that violence remains one of the major factors undermining the quality of family life especially for women and children It can be acknowledged that there has been some progress in the areas of social policy and clinical practice and yet the number of individuals and families affected by violence is still at an alarming level The chapters in this second edition testify to the ongoing expansion of knowledge in the field of family and intimate violence They attempt to summarize some of the best of current scholarship conducted by family violence researchers Several chapters address issues of prevention treatment and intervention services The contributors are all leaders in the field and reflect a variety of disciplines and different approaches The diverse perspectives brought to bear on the subject by professionals from a range of disciplines add to the richness of this volume

Preventing Family Violence Kevin D. Browne,Martin Herbert,1997-06-06 Some families are dangerous environments Most practitioners in social work child protection and hospital and community medicine as well as the police will know from their professional experience the extent of spouse abuse child abuse sibling violence and maltreatment of the elderly within the family setting Understanding family violence is the first step towards prevention This book deals with the nature and causes of abuse within the family with its prediction and assessment and with methods for intervention and prevention Reflecting the research evidence of cycles of violence and maltreatment the book is organized as a progressive analysis of abuse of spouses children siblings parents and family elders The authors are both well known for their academic and professional work with families and have written this book for professionals requiring a research and evidence based rather than anecdotal guide to the problems of family violence and to the best practice in related intervention work with families and couples This book is published in the Wiley Series in Family Psychology edited by Neil Frude University of Wales Cardiff

Senate. Committee on Indian Affairs (1993-),1994 Preventing Violence Against Women and Children Institute of Medicine,Board on Global Health,Forum on Global Violence Prevention,2011-10-12 Violence against women and children is a serious public health concern with costs at multiple levels of society Although violence is a threat to everyone women and

children are particularly susceptible to victimization because they often have fewer rights or lack appropriate means of protection. In some societies certain types of violence are deemed socially or legally acceptable thereby contributing further to the risk to women and children. In the past decade research has documented the growing magnitude of such violence but gaps in the data still remain. Victims of violence of any type fear stigmatization or societal condemnation and thus often hesitate to report crimes. The issue is compounded by the fact that for women and children the perpetrators are often people they know and because some countries lack laws or regulations protecting victims. Some of the data that have been collected suggest that rates of violence against women range from 15 to 71 percent in some countries and that rates of violence against children top 80 percent. These data demonstrate that violence poses a high burden on global health and that violence against women and children is common and universal. Preventing Violence Against Women and Children focuses on these elements of the cycle as they relate to interrupting this transmission of violence. Intervention strategies include preventing violence before it starts as well as preventing recurrence preventing adverse effects such as trauma or the consequences of trauma and preventing the spread of violence to the next generation or social level. Successful strategies consider the context of the violence such as family school community national or regional settings in order to determine the best programs.
