Rivers For Life Managing Water For People And Nature:

Rivers for Life Sandra Postel, Brian Richter, 2012-06-22 The conventional approach to river protection has focused on water quality and maintaining some minimum flow that was thought necessary to ensure the viability of a river. In recent years, however, scientific research has underscored the idea that the ecological health of a river system depends not on a minimum amount of water at any one time but on the naturally variable quantity and timing of flows throughout the year. In *Rivers for Life*, leading water experts Sandra Postel and Brian Richter explain why restoring and preserving more natural river flows are key to sustaining freshwater biodiversity and healthy river systems and describe innovative policies, scientific approaches, and management reforms for achieving those goals. Sandra Postel and Brian Richter explain the value of healthy rivers to human and ecosystem health, describe the ecological processes that support river ecosystems, and how they have been disrupted by dams, diversions, and other alterations. They consider the scientific basis for determining how much water a river needs, examine new management paradigms focused on restoring flow patterns and sustaining ecological health, assess the policy options available for managing rivers and other freshwater systems, explore building blocks for better river governance. Sandra Postel and Brian Richter offer case studies of river management from the United States, the San Pedro Green and Missouri, Australia, the Brisbane, and South Africa, the Sabie, along with numerous examples of new and innovative policy approaches that are being implemented in those and other countries. *Rivers for Life* presents a global perspective on the challenges of managing water for people and nature with a concise yet comprehensive overview of the relevant science, policy, and management issues. It presents exciting and inspirational information for anyone concerned with water policy, planning, and management, river conservation, freshwater biodiversity, or related topics. [Managing Water and Agroecosystems for Food Security](#) Eline Boelee, 2013 Water protection, food production, and ecosystem health are worldwide issues. Changes in the global water cycle are affecting human well-being in many places, while widespread land and ecosystem degradation, driven by poor agricultural practices, is seriously limiting food production. Understanding the links between ecosystems, water, and food production is important to the health of all three, and sustainably managing these connections is becoming increasingly necessary. This book shows how sustainable ecosystems, especially agroecosystems, are essential for water management and food production. *Issues for Debate in Environmental Management* CQ Researcher, 2010 *Issues for Debate in Environmental Management* is a contemporary collection of articles covering core issues within the broad topic of environmental management. The book is intended to supplement core courses in the Business and Management curriculum, titled *Environmental Management: Sustainability and Business and Society*, among other similarly titled courses. The book begins with a feature article titled *The New Environmentalism: Can New Business Policies Save the Environment?* and progresses through 16 articles of topics generally covered in environmental management courses, including global warming, the green economy, clean energy sources, water sources, and other opportunities for business and management exploration.

River Discharge to the Coastal Ocean John D. Milliman, Katherine L. Farnsworth, 2013-03-28 Rivers provide the primary link between land and sea Utilizing the world's largest database this book presents a detailed analysis and synthesis of the processes affecting fluvial discharge of water sediment and dissolved solids It also discusses the ways in which climatic variation episodic events and anthropogenic activities past present and future affect the quantity and quality of river discharge The book contains more than 165 figures many in full color including global and regional maps An extensive appendix presents the 1534 river database as a series of 44 tables that provide quantitative data regarding the discharge of water sediment and dissolved solids The complete database is also presented within a GIS based package available online at www.cambridge.org/milliman Now available in paperback reprinted with corrections this is an invaluable resource for researchers professionals and graduate students in hydrology oceanography geology geomorphology and environmental policy

Climate, Energy and Water Jamie Pittock, Karen Hussey, Stephen Dovers, 2015-03-19 With the global population expected to reach nine billion by 2050 our capacity to provide enough food water and energy relies on our understanding and management of the complex interdependencies in the climate energy water nexus This book presents a comprehensive and up to date analysis of the interdependencies between these sectors and the knock on consequences of those interactions for other sectors such as food production and biodiversity conservation The interdisciplinary nature of the book across the three sectors of climate energy and water means that it will be valuable for advanced students researchers and policymakers across a broad range of fields including environmental energy water climate policy environmental economics climate science hydrology ecology and geography

[Finding the Voice of the River](#) Gary J. Brierley, 2019-09-27 This book addresses societal relationships to river systems highlighting many unexplored possibilities in how we know and manage our rivers Brierley contends that although we have good scientific understanding of rivers with remarkable prospect for profound improvements to river condition management applications greatly under deliver He conceptualizes approaches to river repair in two very different ways Medean competitive and Gaian cooperative Rather than managing rivers to achieve particular anthropogenic goals the former option this book adopts a more than human approach to living with living rivers the latter option applying a river rights framework that conceptualizes rivers as sentient entities Chapters build on significant experience across many parts of the world emphasizing the diverse array of river attributes and relationships to be protected and the wide range of problems to be addressed Although the book has an environmental focus it is framed as an argument in popular philosophy contemplating the agency of rivers as place beings It will be of great value to academics students and general readers interested in protecting river systems

Water and Human Societies David A. Pietz,Dorothy Zeisler-Vralsted,2021-08-18 This book explores the historical relationships between human communities and water Bringing together for the first time key texts from across the literature it discusses how the past has shaped our contemporary challenges with equitable access to clean and ample water supplies The book is organized into chapters that explore thematic issues in water history including Water and Civilizations Water and Health Water and Equity and Water and Sustainability Each chapter is introduced by a critical overview of the theme

followed by four primary and secondary readings that discuss critical nodes in the historical and contemporary development of each chapter theme Further readings at the end of each chapter invite the reader to further explore the dynamics of each theme The foundational premise of the book is that in order to comprehend the complexity of global water challenges we need to understand the history of cultural forces that have shaped our water practices These historical patterns shape the range of choices available to us as we formulate responses to water challenges The book will be a valuable resource to all students interested in understanding the challenges of water use today

Investing in Nature William Ginn, 2013-04-10 In 2004 U S consumers spent 52 billion purchasing bottled water while the government only invested 5 percent of that amount to purchase critical watersheds parks and wildlife refuges systems vital to clean water and healthy environments How can we reverse the direction of such powerful economic forces A group of dedicated business people turned environmental entrepreneurs is pioneering a new set of tools for land conservation deals and other market based strategies These pragmatic visionaries have already used these methods to protect millions of acres of land and to transform the practices of entire industries They are transforming the very nature of conservation by making it profitable Drawing on his vast experience in both business and land conservation at The Nature Conservancy TNC William Ginn offers a practical guide to these innovative methods and a road map to the most effective way to implement them From conservation investment banking to emerging markets for nature's goods and services to new tax incentives that encourage companies to do the right thing Ginn goes beyond the theories to present real world applications and strategies And just as importantly he looks at the lessons learned from what has not worked including his own failed efforts in Papua New Guinea and TNC's controversial compatible development approach in Virginia In an era of dwindling public resources and scarce charitable dollars these tools reveal a new and perhaps the only pathway to achieving biodiversity goals and protecting our lands Conservation professionals students of land conservation and entrepreneurs interested in green business will find Ginn's tales of high finance deals involving vast tracts of pristine land both informative and exciting More than just talk Investing in Nature will teach you how to think big about land conservation
