Shattering Food Politics And The Loss Of Genetic Diversity:

Shattering Cary Fowler, Patrick R. Mooney, 1990 It was through control of the shattering of wild seeds that humans first domesticated plants Now control over those very plants threatens to shatter the world's food supply as loss of genetic diversity sets the stage for widespread hunger Large scale agriculture has come to favor uniformity in food crops More than 7 000 U S apple varieties once grew in American orchards 6 000 of them are no longer available Every broccoli variety offered through seed catalogs in 1900 has now disappeared As the international genetics supply industry absorbs seed companies with nearly one thousand takeovers since 1970 this trend toward uniformity seems likely to continue and as third world agriculture is brought in line with international business interests the gene pools of humanity's most basic foods are threatened The consequences are more than culinary Without the genetic diversity from which farmers traditionally breed for resistance to diseases crops are more susceptible to the spread of pestilence Tragedies like the Irish Potato Famine may be thought of today as ancient history yet the U S corn blight of 1970 shows that technologically based agribusiness is a breeding ground for disaster Shattering reviews the development of genetic diversity over 10 000 years of human agriculture then exposes its loss in our lifetime at the hands of political and economic forces The possibility of crisis is real this book shows that it may not be too late to avert it

The Threatened Gene Cary Fowler, 1990 Since the days of the hunter gatherers Man has used for food plants of a vast genetic diversity Yet the very earliest farming laid the seeds of a frightening tendency greatly increased by the Agricultural Revolution Uniformity in agriculture has been growing at an ever increasing rate most particularly in the use of plant breeds As fewer varieties are employed so the neglected ones disappear and are lost to the global gene pool Genetic erosion is fast gathering pace The southern hemisphere now holds most of the world's germplasm the genetic basis of seeds while the developed world is consolidating its control of genetic resources Unexpected disasters to a particular crop variety will inevitably hit less developed countries harder than the economic superpowers which still see the problem in short and local terms The Threatened Gene looks at the social effects of genetic erosion from the Irish potato blight to mass Ethiopian starvation Control over the gene pool is shifting from farmers to scientists and head of industry while political considerations determine agricultural policy with increasing frequency This comprehensive uncompromising study is written in lay terms from an international perspective Despite the grimness of the message the tale is told with fluency and even humour and offers a solution to potential disaster in which each reader may play a part

Future Survey Annual 1991 Michael Marien, 1991-01-01 **The Diversity of Life** Edward O. Wilson, 1992 View a collection of videos on Professor Wilson entitled On the Relation of Science and the Humanities In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of

violence nature visits upon its creatures Edward O Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain forests are cut down he poignantly describes the death throes of the living world s diversity projected to decline as much as 20 percent by the year 2020 All evidence marshaled here resonates through Wilson s tightly reasoned call for a spirit of stewardship over the world s biological wealth He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth Cutting through the tangle of environmental issues that often obscure the real concern Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over he convincingly drives home the point that both aims can and must be integrated Unparalleled in its range and depth Wilson s masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet s health

The Museum of Bioprospecting, Intellectual Property, and the Public Domain Joseph Henry Vogel, 2011-10-01 The Museum of Bioprospecting Intellectual Property and the Public Domain addresses one of the most pressing policy issues of our day intellectual property rights versus the public domain in facilitating access to genetic resources for biotechnology development The issue is examined in the context of a proposal submitted by seven fictional scholars to an imaginary octogenarian whose humor provides an original addition to the discussion

Biodiversity in Managed Landscapes Robert C. Szaro, David W. Johnston, 1996 The conservation of biodiversity has profound implications for managing natural resources with the need for scientific information as a foundation for management decisions increasing dramatically The intent of this book is to look beyond the theory of biodiversity to the principles practices and policies needed for its conservation Its objectives are to provide the scientific basis for understanding biodiversity document case examples of theory and concepts applied at differing scales and examine policies that affect its conservation

The Politics of Industrial Agriculture Tracey Clunies-Ross, Nicholas Hildyard, 2013-11-05 In the last forty years agriculture in the industrialised countries has undergone a

revolution That has dramatically increased yields but it has also led to extensive rural depopulation widespread degradation of the environment contamination of food with agrochemicals and bacteria more routine maltreatment of farm animals and the undermining of Third World economies and livelihoods through unfair trading systems Confronted by mounting evidence of environmental harm and social impacts mainstream agronomists and policy makers have debatedly recognized the need for change Sustainable agriculture has become the buzz phrase But that can mean different things to different people We have to ask sustainable agriculture for whom Whose interests are benefiting And whose are suffering At issue is the question of power of who controls the land and what it produces Most of the changes currently under discussion will actually strengthen the status quo and the underlying causes of the damage The result will be greater intensification of farming environmental destruction and inequality There are no simple off the shelf alternatives to industrial agriculture There are however groups throughout the world who have contributed to this report and who are working together on a new approach An agriculture that in Wendell Berry s words depletes neither soil nor people Originally published in 1992

The Neoliberal Diet Gerardo Otero,2018-10-03 This remarkable comprehensive study of neoliberal agribusiness and the obesity epidemic is critical reading for food studies scholars Contemporary Sociology Obesity rates are rising across the United States and beyond While some claim that people simply eat too much energy dense food while exercising too little The Neoliberal Diet argues that the issue is larger than individual lifestyle choices Since the 1980s the shift toward neoliberal regulation has enabled agribusiness multinationals to thrive by selling a combination of meat and highly processed foods loaded with refined flour and sugars a diet that originated in the United States Drawing on extensive empirical data Gerardo Otero identifies the socioeconomic and political forces that created this diet which has been exported around the globe at the expense of people s health Otero shows how state level actions particularly subsidies for big farms and agribusiness have ensured the dominance of processed foods and made fresh foods inaccessible to many Comparing agrifood performance across several nations including the NAFTA region and correlating food access to class inequality he convincingly demonstrates the structural character of food production and the effect of inequality on individual food choices Resolving the global obesity crisis Otero concludes lies not in blaming individuals but in creating state level programs to reduce inequality and make healthier food accessible to all

These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered.

The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts.

The Secret History is a brilliant and suspenseful novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
