Lymphoreticular Disease:

Lymphoproliferative Diseases D.B. Jones,D.H. Wright,2012-12-06 Recent developments in the field of cellular pathology and molecular biology have had a major impact on our ability to diagnose lymphoreticular disease and on our understanding of many of the disease processes which contribute to lymphoreticular pathology Twenty years ago the immunological analysis of lymphoid proliferations was in its infancy The techniques available such as sheep red blood cell rosetting and immune adherence to frozen sections now appear unbelievably crude when compared with our ability to accurately phenotype lymphocytes in suspension in frozen section and more recently in formalin fixed paraffin embedded tissue biopsies Four international work shops have also standardized the nomenclature for the wide range of lineage restricted and lineage related monoclonal antibodies available and have provided a basis for the sophisticated phenotypic analysis of lymphoid neoplasms in even the smallest routine laboratories Our concepts relating to the pathogenesis of a number of human lymphomas have also changed substantially and this has been aided by the development of systems for the classification of human lymphoma which are firmly based in our knowledge of the differentiation and biological behaviour of normal lymphoreticular cells In this monograph we present contributions from many authors examining both leukaemia and lymphoma from an immunological perspective It is our hope that some of these contributions will be of practical value in the laboratory investigation and diagnosis of lymphoreticular disease Other contributions record our conceptual understanding of the histogenesis and pathogenesis of human lymphoma

Diseases of the Salivary Glands Including Dry Mouth and Sjögren's Syndrome Isaäc van der Waal,2012-12-06 Both the major and minor salivary glands can be the site of a wide variety of diseases and functional disturbances This monograph covers both the common lesions and conditions of the salivary glands as well as the rare ones Much attention is given to the problematic complaint of dry mouth and the even more cumbersome diagnostic aspects of Sj gren s syndrome Emphasis is on the clinical aspects and the management of the various disorders The vast experience of the authors is reflected in their clear and concise style The illustrations are well chosen and updated references are provided where appropriate

Malignant Lymphomas of the Nervous System K. Jellinger, F. Seitelberger, 2013-06-29 More than 150 years have passed since involvement of the nervous system in leukemia was first reported by BURNS while the possibility of the primary brain tumor derived from the lymphoreticular tissue was recognized much later BAILEY in 1929 described such neoplasms under the term perithelial sarcoma Later these tumors of the nervous system have been variously designated as Perivascular of perithelial sarcomas reticulum cell sarcomas or microgliomas as controversy has evolved and still exists on the definition of this group of neoplasms and on the nature of their cells of origin Much of the unfortunate confusion concerning the neoplastic lesions attributed to microglia and other derivations of the RE system arose because their close relationship to extra neural cells has been ignored On the other hand communication in the field of malignant lymphomas has become increasingly difficult because of the termino logic maze and conceptual diversities of traditional morphological classifica tions that have limited valid comparisons Although at present we are still far from a precise recognition of the basic features of lymphoproliferative processes and from a fairly general agreement on the terminology of non Hodgkin lymphomas there is encouraging evidence recently of some enlightenment on the nature of tumor
