**Lysine, Tryptophan and Other Amino Acids** Robert Garrison, Jr., 1982      *Nutrient Requirements of Swine* National Research Council, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Committee on Nutrient Requirements of Swine, 2012-08-02 Since 1944 the National Research Council has published 10 editions of the *Nutrient Requirements of Swine*. This reference has guided nutritionists and other professionals in academia and the swine and feed industries in developing and implementing nutritional and feeding programs for swine. The swine industry has undergone considerable changes since the tenth edition was published in 1998 and some of the requirements and recommendations set forth at that time are no longer relevant or appropriate. The eleventh revised edition of the *Nutrient Requirements of Swine* builds on the previous editions published by the National Research Council. A great deal of new research has been published during the last 15 years and there is a large amount of new information for many nutrients. In addition to a thorough and current evaluation of the literature on the energy and nutrient requirements of swine in all stages of life, this volume includes information about feed ingredients from the biofuels industry and other new ingredients, requirements for digestible phosphorus and concentrations of it in feed ingredients, a review of the effects of feed additives and feed processing and strategies to increase nutrient retention and thus reduce fecal and urinary excretions that could contribute to environmental pollution. The tables of feed ingredient composition are significantly updated. *Nutrient Requirements of Swine* represents a comprehensive review of the most recent information available on swine nutrition and ingredient composition that will allow efficient, profitable and environmentally conscious swine production.

Organized into 11 chapters, this volume starts with an overview of the advantages of body compositional data that are useful in evaluating treatment effects associated with physiological or nutritional experiments. This text then delineates the detection of aberrations in the metabolism of tryptophan which may be induced by pathological stress. Other chapters consider the impact of hormones on the utilization of several nutrients. This book discusses as well the utilization of the essential nutrients including amino acids, biotin, folic acid, pantothenic acid and fat soluble vitamins. The final chapter deals with principles and methods of nutritional needs in humans. Biochemists, graduate students and investigators in the life sciences will find this book useful.
