Machina Ex Dea Feminist Perspectives On Technology:

The Organic Chemistry of Animal Defense Mechanisms Jerrold Meinwald, 1982 **Machina Ex Dea** Joan Rothschild, 1993 *Feminist Technology* Linda L. Layne, Sharra Louise Vostral, Kate Boyer, 2010 Recognizing the different needs desires of women acknowledging the multiplicity of feminist approaches this work offers a debate on existing emergent technologies that share the goal of improving women's lives *Gender Division of Labor in Korea* Hyoungh Cho, Pil-wha Chang, 1994 Women, Work and Computing Ruth Woodfield, 2000-12-28 Although few dispute the computer's place as a pivotal twentieth century artefact little agreement has emerged over whether the changes it has precipitated are generally positive or negative in nature or whether we should be contemplating our future association with the computer more with enthusiasm or trepidation Specifically with regard to the relationship between women and computers a diverse body of commentary has embraced the views of those who have found grounds for expressing pessimism about this association and those who have favoured a more optimistic assessment of the current situation and its probable future development This book undertakes a thorough evaluation of the legitimacy and predictive power of the optimistic commentary Using a large body of original qualitative data it interrogates the bases of what it identifies as three waves of optimism and in doing so provides answers to some of the key questions asked in this field today European Women and Preindustrial Craft Daryl M. Hafer, 1995-07-22 These essays with their combination of fascinating detail with respect to the individual industries and their innovative conceptual approach will be a most valuable source for any student of labor and gender history Labor History an engaging and thought provoking volume Technology and Culture Essays examine key 18th and 19th century industries including spinning weaving calico painting and the lingerie trade Focusing on links between women's preindustrial craft production and heavy industrialization this volume shows how women adopted or rejected new technology in various situations helping maintain social peace during profound economic dislocation *Girls Coming to Tech!* Amy Sue Bix, 2022-11-01 How women coped with both formal barriers and informal opposition to their entry into the traditionally masculine field of engineering in American higher education Engineering education in the United States was long regarded as masculine territory For decades women who studied or worked in engineering were popularly perceived as oddities outcasts unfeminine or inappropriately feminine in a male world In *Girls Coming to Tech* Amy Bix tells the story of how women gained entrance to the traditionally male field of engineering in American higher education As Bix explains a few women breached the gender reinforced boundaries of engineering education before World War II During World War II government employers and colleges actively recruited women to train as engineering aides channeling them directly into defense work These wartime training programs set the stage for more engineering schools to open their doors to women Bix offers three detailed case studies of postwar engineering coeducation Georgia Tech admitted women in 1952 to avoid a court case over objections by traditionalists In 1968 Caltech male students argued that nerds needed a civilizing female presence

At MIT which had admitted women since the 1870s but treated them as a minor afterthought feminist era activists pushed the school to welcome more women and take their talent seriously In the 1950s women made up less than one percent of students in American engineering programs in 2010 and 2011 women earned 18.4% of bachelor's degrees 22.6% of master's degrees and 21.8% of doctorates in engineering Bix's account shows why these gains were hard won *Handbook of Gender, Work and Organization* Emma Jeanes, David Knights, Patricia Yancey Martin, 2012-03-02 This work of reference represents a remarkably complete detailed and extensive review of the field of gender work and organization in the second decade of the 21st century Its authors represent eight countries and many disciplines including management sociology political science and gender studies The chapters by top scholars in their areas of expertise offer both reviews and empirical findings and insights and challenges for further work The chapters are organized in five sections Histories and Philosophies Organizing Work and the Gendered Organization Embodiment Globalization and Diversity Theoretical and conceptual developments at the cutting edge of the field are explicated and illustrated by the handbook's authors Methods for conducting research into gender work and organization are reviewed and assessed as well as illustrated in the work of several chapters Efforts to produce greater gender equality in the workplace are covered in nearly every chapter in terms of past successes and failures Military organizations are presented as one of the difficult to change in regards to gender with the result that women are marginalized in practice even when official policies and goals require their full inclusion The role of the body embodiment is emphasized in several chapters with attention both to how organizations discipline bodies and how organizational members use their bodies to gain advantage Particular attention is paid to sexuality in and organizations including sexual harassment policies to alleviate bias and the likelihood that future work will pay more attention to the body's presence and role in work and organizations Many chapters also address change efforts that have been employed by individuals groups and organizations including transnational ones such as the European Union the United Nations and so on In addition to its value for teachers and students within this field it also offers insights that would be of value to policy makers and practitioners who need to reflect on the latest thinking relating to gender at work and in organizations

Women in Engineering Margaret E. Layne, 2009-06-05 *Women in Engineering Pioneers and Trailblazers* introduces the visionary women who opened the door for today's female engineers Pioneers such as Emily Roebling Kate Gleason Edith Clarke and Katherine Stinson come to life in this anthology of essays articles lectures and reports In this book the significant contributions women have made to engineering in areas as diverse as construction management environmental protection and industrial efficiency are finally placed in their proper historical context Studies on women engineers in the 1920s and in the years following World War II underscore how far women have progressed in engineering and how far they have to go With selections that span a century of historical and social analysis *Women in Engineering Pioneers and Trailblazers* and its companion volume *Women in Engineering Professional Life* present a range of perspectives on women in engineering that

will be of interest to historians engineers educators and students About the Author Margaret E Layne P E is project director of Advance VT a program created at Virginia Tech to increase the participation and advancement of women in academic science and engineering careers Technologies of the Gendered Body Anne Marie Balsamo,1996 This book looks at the representation of the body in culture from a feminist perspective Subjects covered include bodybuilding cosmetic surgery and cyberculture **Learning Mathematics** Prof Leone Burton,Leone Burton,2012-10-12 Learning Mathematics brings together a collection of interrelated and forward looking chapters by internationally recognized experts that explores changes in the theories and practices of learning and teaching mathematics The authors reject a traditional transmission view of the teaching of mathematics which has proved so ineffective for learning In its place they offer information gathered from research and from practice about effects on the learners seeking to create and negotiate meaning Learners are presented as actively attempting to make sense of the mathematics they encounter and learners teachers and researchers are offered examples of how such sense making activities incorporated into mathematics classrooms impact on coming to know The book celebrates both diversity in the range of different perspectives contributions and topics and unity in the linking chapters and themes It will be fascinating reading for those mathematics educators who are eager to engage with a socio cultural perspective in order to better understand the complexity of learning mathematics *Feminists Who Changed America, 1963-1975* Barbara J. Love,2006-09-22 Documenting key feminists who ignited the second wave women s movement Barbara J Love s *Feminists Who Changed America 1963 1975* will be the first comprehensive directory to document many of the founders and leaders including both well known and grassroots organizers of the second wave women s movement It tells the stories of more than two thousand individual women and a few notable men who together reignited the women s movement and made permanent changes to entrenched customs and laws The biographical entries on these pioneering feminists represent their many factions all parts of the country all races and ethnic groups and all political ideologies Nancy Cott s foreword discusses the movement in relation to the earlier first wave and presents a brief overview of the second wave in the context of other contemporaneous social movements *Notes on Nowhere* Jennifer Burwell,1997 *Notes on Nowhere* was first published in 1997 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The term utopia implies both good place and nowhere Since Sir Thomas More wrote *Utopia* in 1516 debates about utopian models of society have sought to understand the implications of these somewhat contradictory definitions In *Notes on Nowhere* author Jennifer Burwell uses a cross section of contemporary feminist science fiction to examine the political and literary meaning of utopian writing and utopian thought Burwell provides close readings of the science fiction novels of five feminist writers Marge Piercy Sally Gearhart Joanna Russ Octavia Butler and Monique Wittig and poses questions central to utopian writing Do these texts promote a tradition in which narratives of the ideal society have been used to hide rather than reveal violence oppression and

social divisions Can a feminist critical utopia offer a departure from this tradition by using utopian narratives to expose contradiction and struggle as central aspects of the utopian impulse What implications do these questions have for those who wish to retain the utopian impulse for emancipatory political uses As one way of answering these questions Burwell compares two figures that inform utopian writing and social theory The first is the traditional abstract revolutionary subject who contradicts existing conditions and who points us to the ideal body politic The second resistant subject is partial concrete and produced by conditions rather than operating outside of them In analyzing contemporary changes in the subject's relationship to social space Burwell draws from and revises standpoint approaches that tie visions of social transformation to a group's position within existing conditions By exploring the dilemmas antagonisms and resolutions within the critical literary feminist utopia Burwell creates connections to a similar set of problems and resolutions characterizing nonliterary discourses of social transformation such as feminism gay and lesbian studies and Marxism *Notes on Nowhere* makes an original significant and persuasive contribution to our understanding of the political and literary dimensions of the utopian impulse in literature and social theory Jennifer Burwell teaches in the Department of English at Wesleyan University in Connecticut

Media & Performance Johannes H. Birringer, 1998 The author discusses the performance aspects of such political events as the breaching of the Berlin wall and the destruction of Sarajevo and examines the use of video and agitprop performance in political activity including protests by the gay activist group ACT UP and the disquieting performances of the former pornography actress and sex worker Annie Sprinkle Birringer ends with a discussion of the continuing incursions of business into digital media including the imperialism of technological enhancements as experienced in the culture of constant upgrades and the omnipresence of Bill Gates

Gender and Archaeology Rita Wright, 1996-10 *Gender and Archaeology* challenges archaeologists to draw on wider feminist discourses in their interpretations of past societies and also challenges feminist scholars in other disciplines to consider new engendered approaches to archaeology

Bodies in Glass Deborah Lynn Steinberg,1997 An imaginative and original reappraisal of reproductive science Bodies in glass explores the complex cultural landscape and emergent iconographic bodies of in vitro fertilisation IVF and medical genetic discourse Through a compelling deconstruction of medical and legal languages texts and institutional practices Deborah Lynn Steinberg traces the convergence of four key logics authorial recombinant embryo protectionist and eugenic which she argues are embedded in the field of IVF the textual material processes of erasure and recombination of women s bodies and reproductive fitness

The Church as Salt and Light Stan Chu Ilo,Joseph Ogbonnaya,Alex Ojacor,2012-10-01 At once prophetic pastoral and personal this book applies the symbols of salt and light as ecclesiological images for reimagining the African Church for today and tomorrow The proposal of this book is to reconsider the path towards abundant life for God s people in the challenging context of African continent and through the agency of African Christianity The contributors stress the necessity of de Westernizing African Christianity and ask these fundamental questions What is the face of Jesus inAfrican Christianity What is the face and identity of the Church in Africa What positive imprint is Christianity leaving on the lives and societies of African Christians Does the Christian message have the potential of positively affecting African civilization as it once did in Europe What is the relevance and place of African Christianity as a significant voice in shaping both the future of Africa and that of world Christianity

Technical Fouls John Kurt Jacobsen,2018-02-07 What is it that shapes the direction of technological progress in advanced industrial societies Is it science Technology itself Or is it something even more powerful and all encompassing like power or money or politics John Kurt Jacobsen addresses this topic by investigating how contemporary democratic capitalist states govern the development and deployment of their scientific and technological resources He examines the interaction of ideology profits and power and their combined effect upon technology policy in democracies The social function of science has been a contentious area of scholarly study throughout the second half of the twentieth century Although the book focuses mainly on the United States for the sake of instructive comparison it also studies technological development of other societies including the former Soviet Union and China Some competing accounts of technical change across the borders include laissez faire cultural and neo Marxist markets In fact with regard to laissez faire markets even to inquire if science has a social function is to deviate from the appropriate images of economic development What is always politically at stake is who will rule the next stage in production due to each swing in technology which will in turn be associated with a new structure of control Most recently the microchip revolution and cyberspace are the most highly publicized candidates for the next upswing in technology and thus

the next new structure of control The explanatory focus of the book is on ideology or on ideas about how technology works and should work and the three key areas of policy contention discussed are industrial development military uses and the environment Students and scholars of science technology and sociology should find this book useful in coming to terms with the fundamental questions underlying the development of technology today
