Information Extraction: A Multidisciplinary Approach to an Emerging Information Technology Maria T. Pazienza, 2005-08-29 Information extraction IE is a new technology enabling relevant content to be extracted from textual information available electronically IE essentially builds on natural language processing and computational linguistics but it is also closely related to the well established area of information retrieval and involves learning In concert with other promising and emerging information engineering technologies like data mining intelligent data analysis and text summarization IE will play a crucial role for scientists and professionals as well as other end users who have to deal with vast amounts of information for example from the Internet As the first book solely devoted to IE it is of relevance to anybody interested in new and emerging trends in information processing technology

Scientific Data Mining and Knowledge Discovery Mohamed Medhat Gaber, 2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1 Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scientific data The use of computational power for data analysis

and knowledge discovery in scientific disciplines has found its roots with the revolution of high performance computing systems. Computational science in physics, chemistry, and biology represents the first step towards automation of data analysis tasks. The rationale behind the development of computational science in different areas was automating mathematical operations performed in those areas. There was no attention paid to the scientific discovery process. Automated Scientific Discovery (ASD) [13] represents the second natural step. ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences. Although early research articles have shown great successes, the area has not evolved due to many reasons. The most important reason was the lack of interaction between scientists and the automating systems.

Relations and Kleene Algebra in Computer Science Rudolf Berghammer, Ali Jaoua, Bernhard Möller, 2009-11-03

The book constitutes the joint refereed proceedings of the 11th International Conference on Relational Methods in Computer Science (RelMiCS 2009) and the 6th International Conference on Applications of Kleene Algebras (AKA 2009) held in Doha, Qatar, in November 2009. The 22 revised full papers presented together with 2 invited papers were carefully reviewed and selected from numerous submissions. The papers describe the calculus of relations and similar algebraic formalisms as methodological and conceptual tools with special focus on formal methods for software engineering, logics of programs, and links to neighbouring disciplines. Their scope comprises relation algebras and Kleene algebras related formalisms such as process algebras, fixed point calculi, idempotent semirings, quantales, allegories, dynamic algebras, cylindric algebras, and their applications in areas such as verification, analysis, and development of programs and algorithms, relational formal methods such as B or Z tabular methods, algebraic approaches to logics of programs, modal and dynamic logics, interval and temporal logics, algebraic semantics of programming languages, graph theory and combinatorial optimization, games, automata and language theory, mechanised and automated reasoning, decision procedures, spatio-temporal reasoning, knowledge acquisition, preference and scaling methods, or information systems.
