New Frontiers Of Mrbased Techniques In Multiple Sclerosis:

New Frontiers of MR-based Techniques in Multiple Sclerosis Massimo Filippi, Giancarlo Comi, 2012-12-06 In the past few years there have been impressive advances in the implementation of modern MRI techniques for the assessment of MS patients with the ultimate goal to define MRI markers of MS evolution The authors of this volume not only review these new techniques such as magnetization transfer MT MRI diffusion weighted DW MRI and proton MR spectroscopy MRS that are increasingly being used to monitor MS evolution but also those such as functional MRI fMRI cell specific MRI perfusion MRI and microscopic imaging with ultra high field MRI that are emerging as additional promising tools for improving our understanding of MS pathophysiology Strengths and weaknesses of all these modern quantitative MRI techniques for the study of MS are extensively covered in this book The book also provides a valuable summary of the state of the art

Multiple Sclerosis Michael Olek, 2007-10-27 A synthesis of current concepts about the evaluation treatment and future directions in MS On the evaluation side the authors review the use of MRI magnetic resonance spectroscopy functional MRI and three dimensional MRI and consider the rapidly developing body of pathologic information they have yielded On the treatment side the focus is on recently approved medications Novantrone new indications for medications CHAMPS Trial medications in development Oral Interferon Tau Oral Copaxone and Oral Cellcept immunosuppressive therapy for both progressive disease and symptomatic therapy the current medications for treating relapsing remitting MS Avonex Betaseron and Copaxone are also discussed For future directions the authors present the current best thinking as well as the latest discoveries in immunology relating to MS including groundbreaking B cell research and its applications to specific immunotherapies and the use of immune markers for tracking the disease

Normal-appearing White and Grey Matter Damage in Multiple Sclerosis M. Filippi, G. Comi, M. Rovaris, 2012-12-06 In the last few years increasing effort has been devoted to better define the characteristics of tissue damage occurring outside MRI visible lesions in patients with multiple sclerosis MS and as a consequence to improve our understanding of the disease pathobiology and of the mechanisms leading to the accumulation of irreversible disability This book provides an updated review of the results obtained by leading research groups in this field The potential clinical applications of what has been shown so far as well as the areas for future research in the study of normal appearing white and gray matter damage in MS are extensively discussed making this book a valuable tool for clinical neurologists who are involved in the daily life care of MS patients and for neuroscientists involved in MS research

MR Imaging in White Matter Diseases of the Brain and Spinal Cord Massimo Filippi, Nicola de Stefano, Vincent Dousset, Joseph C. McGowan, 2005-12-29 In recent decades the use of neuroimaging techniques has resulted in outstanding progress in the diagnosis and management of neurological diseases and this is particularly true of those diseases that affect the white matter of the brain and spinal cord This book written by internationally acclaimed experts comprises a series of comprehensive and up to date reviews on the use of MR imaging in these major neurological conditions

The diverse available MR techniques such as magnetization transfer MRI diffusion weighted MRI MR spectroscopy functional MRI cell specific MRI perfusion MRI and microscopic imaging with ultra high field MRI offer an extraordinarily powerful means of gaining fundamental in vivo insights into disease processes The strengths and weaknesses of all these techniques in the study of multiple sclerosis and other relevant diseases are extensively considered After an introductory section on neuroimaging technology subsequent sections address disorders of myelination demyelinating diseases immune mediated disorders and white matter disorders related to aging and other conditions This book provides a valuable summary of the state of the art in the field and defines important areas for future research

The ability to understand the underlying mechanisms that drive the heterogeneity in inflammatory responses among patients suffering from immune mediated conditions is critical The nature of the immune mechanism ranges from the degree of immune cell activation to the HLA genotypes and the intensity of responses of target tissues to cytokines High throughput experiments have generated significant information for us to facilitate the identification of disease associated components for different complex immune mediated conditions e g psoriasis lupus rheumatoid arthritis inflammatory bowel diseases and the advances in biotechnologies and efficiency in computational resources have further promised cost effective opportunities to simultaneously study the different aspects in the basic and translational domains of these human diseases The critical questions we face are to provide efficient inference to integrate these datasets and translate what we have learned from the disease associated components to understand the heterogeneity e g ethnic gender genetic differences in disease manifestation and prognosis of these immune mediated conditions Translating and integrating big data to understand the intrinsic factors that shape the different unique natures of inflammation processes require an efficient and flexible framework to incorporate signatures of different types **Advanced Imaging Methods in Neuroscience** João O.
