Octopuses And Other Animals With Amazing Senses:

Octopuses and Other Animals with Amazing Senses Susan LaBella, 2014 **Sensory Systems of Animals** Mark Hollins, 2024-10-10 Perception in animals is a fascinating and challenging subject that calls to students from many disciplines The aim of this book is to provide a knowledge base and unifying perspective on the field that will enable beginning researchers to chart their own course within it The author describes in a systematic but engaging way the sensory systems of humans and other vertebrates as well as arthropods and molluscs Why is it important to understand the senses of animals One reason is that human activities are changing the perceptual world of animals in ways that expose them to danger From bright outdoor lighting disorienting migrating birds to human sonar driving whales to beach themselves it is becoming increasingly important to find ways to reduce such dangers This will require big changes in human behavior and greater understanding of how animals react physiologically and behaviorally to anthropogenic changes in their environment The emphasis throughout is on research in both the behavioral ethological and neuroscientific traditions that has led to important discoveries The functional anatomy of each system from receptor cells to brain areas is succinctly described explaining how it underlies the animal's sensory abilities and behavior Overall descriptions of a sense for a class of animals for example hearing in arachnids are interspersed with expanded coverage of that sense in a particular animal such as the ogre faced web casting spider that does a backflip to capture an insect buzzing overhead Evolutionary themes are found throughout the book for example in describing the development of the vertebrate ear and in the convergent evolution of the eyes of vertebrates and cephalopods With over 500 references and 80 illustrations this textbook is primary reading intended for advanced undergraduates and beginning graduate students of veterinary science lab animal science and zoology It would also be of great interest to professionals and academics working with animals such as veterinary professionals and zookeepers *The Amazing Octopus* Bobbie Kalman, Rebecca Sjonger, 2003 Octopuses have captivated people's imagination for centuries Young readers will be intrigued to discover how these tentacled animals move through water how they hunt how they use camouflage and other protection measures and why octopuses are important in oceans around the world

beyond our brains into the world around us and even into the future Nearly everyone has experienced the feeling of being watched or had their stare result in a glance in their direction The phenomenon has been cited throughout history in nearly every culture along with other commonplace paranormal occurrences such as premonitions and telepathy In this newly updated edition Sheldrake shares his more than 25 years of research into telepathy the power of staring remote viewing precognition and animal premonitions Drawing on more than 5 000 case histories 4 000 questionnaire responses and the results of experiments on staring thought transference phone telepathy and other phenomena carried out with more than 20 000 people as well as reports and data from dozens of independent research teams Sheldrake shows that these unexplained human abilities such as the sense of being stared at are not paranormal but normal part of our biological nature He reveals that telepathy depends on social bonds and traces its evolution from the connections between members of animal groups such as flocks schools and packs Sheldrake shows that our minds and intentions extend beyond our brains into our surroundings with invisible connections that link us to each other to the world around us and even to the future
