**Fatigue in Patients with Cancer** Agnes Glaus, 1998-02-19 Current literature shows that there is a gap in our knowledge about how tiredness fatigue in cancer patients should be defined and measured Existing fatigue related research in cancer patients shows conceptual and measurement differences Piper 1993 There is no continuum of tiredness fatigue in universal use What do patients mean if they fill in a visual analogue scale indicating that they feel very tired Is it an indicator of general well being and thus an 1993 Most articles estimate of general quality of life Hirny and Bernhard written by English

authors use the word fatigue to identify extreme tiredness. It could be said that in the English language tiredness that is perceived as unusual continuing distress is fatigue rather than tiredness. In the German language tiredness *Müdigkeit* is not primarily a term for distress attributed to disease or unusual effort. But tiredness becomes a distressing phenomenon when it no longer regulates a healthy balance between rest and activity but represents unusual abnormal or excessive whole body tiredness that is disproportionate to or unrelated to activity or excessive exertion (Piper 1993). As there is no word for fatigue in the German language, the definition extreme unusual tiredness in German extreme *unübliche Müdigkeit* is used to explain the term fatigue. This clarification is needed to ensure that future fatigue research conducted in German speaking countries can be compared with such research carried out elsewhere.
