Recombinant DNA Research and the Human Prospect Earl D. Hanson, 1983 Recombinant DNA Research and the Human Prospect E. D. HANSON ((Ed.)), 1983 *Recombinant DNA Research and the Human Prospect* Earl D. Hanson, 1983-01-01 Recombinant DNA Research, 1986 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1983 **Future Survey Annual 1983** Michael Marien, 1984-01-01 **Controversial Science** Thomas Brante, Steve Fuller, Professor of Sociology Steve Fuller, PhD, William Lynch, 1993-01-01 This book represents emerging alternative perspectives to the constructivist orthodoxy that currently dominates the field of science and technology studies Various contributions from distinguished Americans and Europeans in the field provide arguments and evidence that it is not enough simply to say that science is socially situated Controversial Science focuses on important political ethical and broadly normative considerations that have yet to be given their due but which point to a more realistic and critical perspective on science policy **Biological Defense Research Program**, 1989 **Bioterrorism: The History of a Crisis in American Society** David McBride, 2022-07-30 Although at the start of the 21st century bioterrorism was newly feared by the public at large it is one threat that institutions have attempted to anticipate for years Originally published in 2003 and now with a new introduction this unique 2 volume collection provides a multi disciplinary resource on the challenges bioterrorism poses for American society and institutions from both legal and political institutions on one hand to public health and medical institutions on the other Volume one documents and analyses the challenge bioterrorism poses to these political economic and legal institutions putting bioterrorism into its historical context as a problem discussed and anticipated by government for decades Volume two documents the challenges bioterrorism poses to public health and public policy as a weapon of disease and fear The materials in these volumes provide case histories and discourse by specialists relating to the ways that the bioterrorism threat has been perceived and approached by US health and law institutions **Current Catalog** National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965 70 *Biotechnology Research Abstracts*, 1984 Monthly Classified listing of references to worldwide articles dealing with all aspects of biotechnology Also includes books and conferences Each entry gives bibliographic information institutional address of author s and abstract Author and subject index **Salvador Luria** Rena Selya, 2022-10-25 The life of Nobel winning biologist Salvador Luria whose passion for science was equaled by his commitment to political engagement in Cold War America Blacklisted from federal funding review panels but awarded a Nobel Prize for his research on bacteriophage biologist Salvador Luria 1912 1991 was as much an activist as a scientist In this first full length biography of Luria Rena Selya draws on extensive archival research interviews with Luria s family colleagues and students and FBI documents obtained through the Freedom of Information Act to create a compelling portrait of a man committed to both science and society In addition to his work with viruses and bacteria in the 1940s Luria broke new ground in molecular biology and

cancer research from the 1950s to the 1980s and was a leader in calling for scientists to accept an educational and advisory responsibility to the public. In return he believed the public should rely on science to strengthen social and political institutions. Luria was born in Italy where the Fascists came to power when he was ten. He left Italy for France due to the antisemitic Race Laws of 1938 and then fled as a Jewish refugee from Nazi Europe making his way to the United States. Once an American citizen, Luria became a grassroots activist on behalf of civil rights, labor representation, nuclear disarmament, and American military disengagement from the Vietnam and Gulf Wars. Luria joined the MIT faculty in 1960 and was the founding director of the Center for Cancer Research. Throughout his life he remained as passionate about his engagement with political issues as about his science and continued to fight for peace and freedom until his death. **Genetic Engineering**

Mark Y. Herring, 2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time. Herring provides a detailed history of the debate in a fair and balanced manner using proponents' points of view to make individual cases both pro and con. Narrative chapters cover such topics as the Human Genome Project, gene splicing, cloning, genetically altered foods, and DNA and crime solving. Students and the general public will find a comprehensive survey of the genetic engineering debate. Appendices include statements from Robert P. George and Peter Singer, two of the most prominent scholars on the subject, and a bibliography of print and electronic resources for further research. Nature Remade Luis A. Campos, Michael R. Dietrich, Tiago Saraiva, Christian C. Young, 2021-07-16 In this fourth volume in our Convening Science series with the Marine Biological Laboratory, contributors including historians, biologists, and philosophers explore the development of bioengineering. The essays show how engineering is both a means to a functional end and a method of learning about the world. The book is organized around three themes: controlling and reproducing, knowing and making, and envisioning, to chart the increasing sophistication of our engineering of biological systems and to change our sense of the scales at which engineering occurs, to include not just genetics but also ecosystem-level intervention. The volume will attempt to make the case for the centrality of engineering for understanding and imagining modern life. *Draft Programmatic Environmental Impact Statement*, 1988 **Sci-Tech Library Networks Within Organizations** Ellis

Mount, 1988 This fascinating volume offers thorough descriptions of sci-tech library networks in which their members have a common sponsorship or ownership. Library networks exist in such great quantity and diversity now that it is not difficult to identify many types of them. Corporate library networks, AT&T, Xerox, and General Electric, and federal government networks, NASA and FEDLINE, are the focus here as the authors present the history, development, and activities of these networks. A library network for health sciences libraries that use OCLC is also scrutinized. **The Experiences and Challenges of Science and Ethics**, 2003-01-01 In April 2002 the U.S. National Academies hosted an interacademy workshop involving participants from the United States and Iran on the topic of Science and Ethics. The explicit purposes of the workshop were a) to engage important members of the American and Iranian scientific communities in meaningful discussions of the topic of

science and ethics and particularly differences in the approaches in the west and in Islamic countries in general and Iran in particular b to encourage greater participation by Iranian scientists in international scientific discussions by exposing them to seasoned veterans in international meetings and c to identify specific topics and approaches that could be carried out by the Academies in the two countries to contribute to international understanding of the importance of considering the ethical dimensions of scientific research and related activities This report includes documents prepared by four breakout groups and a statement on priority areas for future interacademy cooperation developed at the final plenary session Also included are background papers prepared by some participants prior to the workshop that were not previously published

The Second Tree Elaine Dewar, 2010-07-07 The Second Tree documents a biological revolution that will change the way you think about the material world your own life and even the inevitability of your own death Genetic scientists are busily pushing back the boundaries of the humanly possible climbing the branches of a tree of life that has been grafted by man not God Elaine Dewar chronicles the lives the discoveries and the feuds among modern biologists exploring how they have crafted the tools to alter human evolution She travels the globe on the trail of Charles Darwin and his intellectual descendants telling the story of James D Watson and his partner Francis Crick who first described DNA of Frederick Sanger who invented how to sequence genes and won two Nobel prizes of the computer scientists who put the human genome on the World Wide Web She visits companies that are trying to turn cloned sheep into pharmacies on the hoof to resurrect prize cows from the grave to transplant human genes into mice ultimately attempting to give us immortality in pieces while trying to keep investors happy As these tales spill out we find out how biologists learn by doing tearing mice and worms and flies and human eggs apart twinning disparate animal cells and genes together creating clones and chimeras as outlandish as any sphinx In public research biologists often express their good intentions about curing the big diseases In private many of them are compelled by furious struggles to be rich famous and first Dewar lays bare the motives conflicts and fears of the men and women whose job it is to trespass the boundaries of what laypeople consider ethical and sacred
