## The practice of clinical neurophysiology – 2019 and beyond

The International Federation of Clinical Neurophysiology (IFCN) was inaugurated as the International Federation of Societies of Electroencephalography and Clinical Neurophysiology (IFSECN) in 1949, and this means that **2019 is our 70th anniversary**. There has been remarkable growth of the specialty and of the Federation over those 70 years. From a diagnostic specialty, clinical neurophysiology has grown to come an essential enabling science for measuring, monitoring and even treating neurological disorders, important in all major fields of modern neuro-care: neurology, neurosurgery, psychiatry, neuropaediatrics, neuro-ICU, neuroradiology, neurorehabilitation, to name just a few.

The history of the Federation is detailed in the book *Wave Length and Action Potentials: History of the International Federation of Clinical Neurophysiology* (by Marc R. Nuwer and Carl-Herman Lücking), freely available in full on the IFCN webpage <http://www.ifcn.info/about-us/history/>.

The Federation grew out of a scientific meeting, now recognised as the first International Congress of the specialty, held at the National Hospital for Nervous Diseases, Queen Square, London in 1947, and attended by approximately 100 participants from 17 countries, most from Britain. This meeting laid the groundwork for the formation of an International Federation and the publication of a journal, which came to be known as *Electroencephalography and Clinical Neurophysiology* [“The EEG Journal”], with Herbert H. Jasper of the Montreal Neurological Institute as its first Editor. The second international meeting was held in Paris in 1949, and the third in Montreal in 1953.

Henri Gastaut drafted the constitution of the International Federation (Fédération Internationale d'Electroencéphalographie et de Neurophysiologie Clinique), and became the first Secretary, with Jasper as the first President, the other Officers being Honorary President: 1932 Nobel Prize winner Edgar D. Adrian (UK; Lord Adrian, 1955), Vice-Presidents: Robert S. Schwab (USA), W. Grey Walter (UK) and Fritz Buchthal (Denmark), and Treasurer: Antoine Rémond (France). We owe a great debt to our founding fathers.

To quote from *Wavelength and Action Potentials*, “the third item on the first morning's program [at the 1947 First Congress] was a discussion on the “Formation of a World EEG Organization and the Foundation of an International Journal”, opened by W.T. Liberson of Hartford, CT, USA. Speaking of the proposed journal he said it: should not be concerned exclusively with electroencephalography, but be devoted to all the problems of experimental and clinical neurophysiology... many of us do not commit ourselves to the problems of the electrical activity of the brain alone, but carry on research in the fields of electroencephalography, electrodermography and electrodiagnosis of peripheral nervous diseases.” It is pleasing to see that, though warmly debated over many years, this sage advice was ultimately accepted by the international community.

The International Federation has always been a federation of societies, without individual membership, and it has grown to embrace national societies from 62 countries. It has a mission “to promote best practice in clinical neurophysiology through education and research throughout the world”, and its vision is “to improve healthcare worldwide by understanding the nervous system and optimising the diagnosis and treatment of its disorders through clinical neurophysiology”. Organisationally the Federation has four “Chapters”, Europe, Middle East and Africa (36 societies), Asia-Oceania (12 societies), Latin America (12 societies) and North America (3 societies), all with a mission to promote research and education in the specialty, to hold Congresses and to grow the specialty in their regions.

As part of that mission, the Federation began a second journal in 2016. I have had the privilege of being the inaugural Editor-in-Chief, joined in this role by Associate Editors Josep Vallis-Sole and Susan T. Herman who stood down once we were successfully up and running, to be replaced by Margitta Seeck. In an Editorial in the first issue, we wrote: “The **rationale** behind the International Federation of Clinical Neurophysiology (IFCN) joining with Elsevier to create a new journal that can focus on education and clinical practice is that submissions on these important goals of the IFCN are becoming difficult to publish in *Clinical Neurophysiology*. This is largely because of the success of that journal: as its international standing has risen, so too have the number of submissions it attracts, and the number of papers that can be accepted has steadily decreased. *Clinical Neurophysiology Practice* has a different rationale to the more research-orientated journal, *Clinical Neurophysiology*, and will provide a publication avenue for clinicians and clinical researchers who are at risk of being disenfranchised by the increasing success of *Clinical Neurophysiology*. Accordingly it is intended that the two journals will complement one another, work closely together, and share the same platforms with Elsevier...” (Burke et al., 2016).

Under **types of papers**: “While “novelty” is an important criterion for a research-orientated journal, clinical practice requires that techniques can be verified, and findings need to be replicated before they are introduced into clinical care. In establishing clinical “best practice”, *Clinical Neurophysiology Practice* will welcome scientifically sound papers that may not be “novel” but which establish the value of a procedure. Methodological and technical reports and studies reporting normative data on healthy subjects are welcome, provided that they represent an advance on current knowledge and particularly if they are likely to change clinical practice. Reports on cases that have been worked up well can be educationally instructive, and this journal welcomes them, without the space and figure limitations that apply to *Clinical Neurophysiology*. Indeed inadequate illustration of neurophysiological findings limits the educational value of the case and is likely to be a barrier to acceptance...” (Burke et al., 2016).

**Recommendations for the Practice of Clinical Neurophysiology** International Federation of Societies for Electroencephalography and Clinical Neurophysiology,1983

**Recommendations for the Practice of Clinical Neurophysiology** International Federation of Clinical Neurophysiology,1999 This volume is a state of the art summary of all the established techniques of clinical neurophysiology It covers all the technical aspects and the relevant information for the application of these techniques in a clinical setting An excellent book there is no other comparable work available on the market The authors are top scientists representing their respective fields in the international scientific community Included are lucid reports on technical standards and applications of electromyography evoked potentials motor evoked potentials reflex tests and tests of autonomic functions in clinical neurophysiology and electrooculography Setting the standards for the clinical routine and applications in neurology psychiatry and child neurology it should have a place on the bookshelves of physicians and technicians in clinical neurophysiology

**Neurophysiological Monitoring During Intensive Care and Surgery** N. Jollyon Smith,Mark van Gils,Pamela Prior,2006 This title enables readers to understand how to undertake appropriate neurophysiological investigations in the critical care setting The book addresses the scientific principles biological and technological recording techniques the development of electrical potentials in normal subjects and the ways these are disturbed by trauma surgery and disease The impact of digital technologies and the possibilities of quantification statistical treatment and advanced signal processing techniques have enabled practitioners to work to more rigorous scientific standards The increasing availability of such tools in daily clinical work means that patients can now benefit from investigations of known specificity and sensitivity

### **Recommendations For The Practice Of Clinical Neurophysiology Introduction**

In this digital age, the convenience of accessing information at our fingertips has become a necessity. Whether its research papers, eBooks, or user manuals, PDF files have become the preferred format for sharing and reading documents. However, the cost associated with purchasing PDF files can sometimes be a barrier for many individuals and organizations. Thankfully, there are numerous websites and platforms that allow users to download free PDF files legally. In this article, we will explore some of the best platforms to download free PDFs. One of the most popular platforms to download free PDF files is Project Gutenberg. This online library offers over 60,000 free eBooks that are in the public domain. From classic literature to historical documents, Project Gutenberg provides a wide range of PDF files that can be downloaded and enjoyed on various devices. The website is user-friendly and allows users to search for specific titles or browse through different categories. Another reliable platform for downloading Recommendations For The Practice Of Clinical Neurophysiology free PDF files is Open Library. With its vast collection of over 1 million eBooks, Open Library has something for every reader. The website offers a seamless experience by providing options to borrow or download PDF files. Users simply need to create a free account to access this treasure trove of knowledge. Open Library also allows users to contribute by uploading and sharing their own PDF files, making it a collaborative platform for book enthusiasts. For those interested in academic resources, there are websites dedicated to providing free PDFs of research papers and scientific articles. One such website is Academia.edu, which allows researchers and scholars to share their work with a global audience. Users can download PDF files of research papers, theses, and dissertations covering a wide range of subjects. Academia.edu also provides a platform for discussions and networking within the academic community. When it comes to downloading Recommendations For The Practice Of Clinical Neurophysiology free PDF files of magazines, brochures, and catalogs, Issuu is a popular choice. This digital publishing platform hosts a vast collection of publications from around the world. Users can search for specific titles or explore various categories and genres. Issuu offers a seamless reading experience with its user-friendly interface and

allows users to download PDF files for offline reading. Apart from dedicated platforms, search engines also play a crucial role in finding free PDF files. Google, for instance, has an advanced search feature that allows users to filter results by file type. By specifying the file type as "PDF," users can find websites that offer free PDF downloads on a specific topic. While downloading Recommendations For The Practice Of Clinical Neurophysiology free PDF files is convenient, it's important to note that copyright laws must be respected. Always ensure that the PDF files you download are legally available for free. Many authors and publishers voluntarily provide free PDF versions of their work, but it's essential to be cautious and verify the authenticity of the source before downloading Recommendations For The Practice Of Clinical Neurophysiology. In conclusion, the internet offers numerous platforms and websites that allow users to download free PDF files legally. Whether it's classic literature, research papers, or magazines, there is something for everyone. The platforms mentioned in this article, such as Project Gutenberg, Open Library, Academia.edu, and Issuu, provide access to a vast collection of PDF files. However, users should always be cautious and verify the legality of the source before downloading Recommendations For The Practice Of Clinical Neurophysiology any PDF files. With these platforms, the world of PDF downloads is just a click away.

### FAQs About Recommendations For The Practice Of Clinical Neurophysiology Books

1. Where can I buy Recommendations For The Practice Of Clinical Neurophysiology books? Bookstores: Physical bookstores like Barnes & Noble, Waterstones, and independent local stores. Online Retailers: Amazon, Book Depository, and various online bookstores offer a wide range of books in physical and digital formats.
