**Mathematics Tomorrow** L.A. Steen, 2012-12-06 Mathematics today is approaching a state of crisis. As the demands of science and society for mathematical literacy increase the percentage of American college students intending to major in mathematics plummets and achievement scores of entering college students continue their unremitting decline. As research in core mathematics reaches unprecedented heights of power and sophistication the growth of diverse applied specialties threatens to fragment mathematics into distinct and frequently hostile mathematical sciences. These crises in mathematics presage difficulties for science and engineering and alarms are beginning to sound in the scientific and even in the political communities. Citing a trend towards virtual scientific and technological illiteracy and a shrinking of our national commitment to excellence in science, mathematics, and technology, a recent study conducted for the President by the U.S. National Science Foundation and Department of Education warns of serious impending shortcomings in public understanding of science. Today people in a wide range of non-scientific professions must have a greater understanding of technology than at any time in our history. Yet our educational system does not now provide such understanding. The study goes on to conclude that present trends pose great risk of manpower shortages in the mathematical and engineering sciences. The pool from which our future scientific and engineering personnel can be drawn is in danger of becoming smaller even as the need for such personnel is increasing. It is time to take a serious look at mathematics tomorrow.

*The Future of College Mathematics* A. Ralston, G. S. Young, 2012-12-06 The Conference Workshop of which these are the proceedings was held from 28 June to 1 July 1982 at Williams College, Williamstown, MA. The meeting was funded in its entirety by the Alfred P. Sloan Foundation. The conference program and the list of participants follow this introduction. The purpose of the conference was to discuss the restructuring of the first two years of college mathematics to provide some balance between the traditional calculus, linear algebra, sequence and discrete mathematics. The remainder of this volume contains arguments both for and against such a change and some ideas as to what a new curriculum might look like. A too brief summary of the deliberations at Williams is that while there were and are inevitable differences of opinion on details and nuance, at least the attendees at this conference had no doubt that change in the lower division mathematics curriculum is desirable and is coming.

**New Directions in Two-Year College Mathematics** Donald J. Albers, Stephen B. Rodi, Ann E. Watkins, 2012-12-06 by Donald J. Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two-year colleges was held at Menlo College. The conference was funded by the Alfred P. Sloan Foundation. Two-year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two-year colleges. These two facts alone suggest the importance of mathematics education in two-year colleges, particularly to secondary schools, four-year colleges, and

universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all undergraduate mathematics enrollments today the fraction is more than one third **Everybody Counts** Mathematical Sciences Education Board, Board on Mathematical Sciences and Their Applications, National Research Council, 1989-01-15 Mathematics is the key to opportunity No longer only the language of science mathematics is now essential to business finance health and defense Yet because of the lack of mathematical literacy many students are not prepared for tomorrow s jobs Everybody Counts suggests solutions Written for everyone concerned about our children s education this book discusses why students in this country do not perform well in mathematics and outlines a comprehensive plan for revitalizing mathematics education in America from kindergarten through college single copy 8 95 2 9 copies 7 50 each 10 or more copies 6 95 each no other discounts apply **Undergraduate Science, Mathematics and Engineering Education** National Science Board (U.S.).
