and B cells have been found to contribute to maintaining this maternal immunological tolerance during pregnancy ILCs have been found to be the most abundant immune cells in the pregnant uterus with many studies focusing on the relationship between RPL and either T cells or natural killer NK cells in peripheral blood and the endometrium decidua Despite progress in uncovering the roles of NK and regulatory T cells and cytokines in pregnancy the immune heterogeneity in patients with URPL remains elusive **Reproductive Immunity** Samuel Livingston, AI, 2025-03-17 Reproductive Immunity explores the fascinating intersection of the immune and reproductive systems essential for fertility pregnancy and overall health The book delves into how a mother s immune system tolerates a genetically distinct fetus while simultaneously defending against infections One intriguing area covered is the maternal fetal interface where immune tolerance is key to preventing complications like recurrent miscarriage Another is the role of the immune system in reproductive cancers such as ovarian and cervical cancer opening doors for innovative immunotherapies The book uniquely integrates cutting edge immunology with clinical applications in reproductive medicine providing a current overview of the field It emphasizes the importance of understanding immune mechanisms for advancing reproductive medicine Starting with the basic principles of reproductive immunology the book systematically progresses through the maternal fetal interface immunological causes of infertility and finally the role of immunity in reproductive cancers offering diagnostic and therapeutic strategies **Immunology of** Pregnancy 2013 Gérard Chaouat, Olivier Sandra, Nathalie Lédée, 2013-11-08 Since a September 1992 Nature article which read Can there be life without LIF researchers now realize that the maternal immune system is both a foe it can reject the conception and a friend immune cells and molecules are also necessary for successful pregnancy Leukemia Inhibitory Factor LIF when absent prevents embryo implantation in rodents From fecundation to parturition immunity acts as a Janus required but potentially dangerous However the complexity and the diversity of immunity in pregnancy deters many from entering the field This book will try to give a complete overview of immunity from gametes till parturition in brief but with complete chapters and subsections each written by specialists in the field The importance of the topic relies not only on the riddle of the fetal allograft which is per se fascinating but on its consequences linked to the development of IVF and in general Assisted Reproductive Technologies ART Medicine Since the discovery that there would not be mammalian life without LIF it has become clear that Immune Molecules and in general transient post mating inflammatory reactions are required for successful implantation Disruptions of this process can lead to implantation failure sterility In later stages of pregnancy immunological cells mostly of the innate immune system control formation of local spiral arteries Finally a state of tolerance establishes itself whose break leads to immune abortion and the vascular bed is further transformed and enlarged till delivery and here again immunological cytokines do play a major role and can eventually cause immune mediated abortion Failure of not just the cytokine and cell recognition mediated dialogue but also the pre and peri implantation preparation of the uterus as stated leads to sterility early pregnancy loss and recurrent abortions. There is also an increasingly stronger

argument to implicate immunology in pre eclampsia Further still immunology is also implicated in the control of local infection mother to child transmission of pathogens notably but not limited to HIV Finally pregnancy is the only known physiological phenomenon where the once named suppressor T cells re emerge as regulatory T cells and play a cardinal role This E book provides a complete compendium of gynecological immunology spanning from fecundation to delivery Topics also include the role of various cell types such as T regs ad NK cells in implantation and uterine changes as well as the genetic regulation of immunological processes As such it will be of interest not only to fundamental and reproductive immunologists but more importantly clinicians in obstetrics and gynecology
