Red Atom Russias Nuclear Power Program:

Red Atom Paul Josephson, 2005-06-10 In the 1950s Soviet nuclear scientists and leaders imagined a stunning future when giant reactors would generate energy quickly and cheaply nuclear engines would power cars ships and airplanes and peaceful nuclear explosions would transform the landscape Driven by the energy of the atom the dream of communism would become a powerful reality Thirty years later that dream died in Chernobyl What went wrong Based on exhaustive archival research and interviews **Red Atom** takes a behind the scenes look at the history of the Soviet Union's peaceful use of nuclear power It explores both the projects and the technocratic and political elite who were dedicated to increasing state power through technology And it describes the political economic and environmental fallout of Chernobyl A story of big science run amok **Red Atom** illuminates the problems that can befall any society heavily invested in large scale technology **Red Atom** Paul R. Josephson, 2005 Reveals the history and death of the Soviet Union's peaceful use of nuclear power through exploration of both the projects and the technocratic and political elite who were dedicated to increasing state power through technology Paul Josephson illuminates the problems that can befall any society heavily invested in large scale technology **The National Politics of Nuclear Power** Benjamin K. Sovacool, Scott V. Valentine, 2012 This book offers a comprehensive assessment of the dynamics driving and constraining nuclear power development in Asia Europe and North America providing detailed comparative analysis The book formulates a theory of nuclear socio political economy which highlights six factors necessary for embarking on nuclear power programs 1 national security and secrecy 2 technocratic ideology 3 economic interventionism 4 a centrally coordinated energy stakeholder network 5 subordination of opposition to political authority and 6 social peripheralization The book validates this theory by confirming the presence of these six drivers during the initial nuclear power developmental periods in eight countries the United States France Japan Russia the former Soviet Union South Korea Canada China and India The authors then apply this framework as a predictive tool to evaluate contemporary nuclear power trends They discuss what this theory means for developed and developing countries which exhibit the potential for nuclear development on a major scale and examine how the new renaissance of nuclear power may affect the promotion of renewable energy global energy security and development policy as a whole The volume also assesses the influence of climate change and the recent nuclear accident in Fukushima Japan on the nuclear power industry's trajectory This book will be of interest to students of energy policy and security nuclear proliferation international security global governance and IR in general *Red Prometheus* Dolores L. Augustine, 2007 This analysis of the relationship between science and totalitarian rule in one of the most technically advanced countries in the East bloc examines professional autonomy under dictatorship and the place of technology in Communist ideology In Cold War era East Germany the German tradition of science based technology merged with a socialist system that made technological progress central to its ideology Technology became an important part of East German socialist identity crucial to how Communists saw their system and how

citizens saw their state In *Red Prometheus* Dolores Augustine examines the relationship between a dictatorial system and the scientific and engineering communities in East Germany from the end of the Second World War through the 1980s Drawing on newly opened archives and extensive interviews Augustine looks in detail at individual scientists interactions with the East German system examining the effectiveness of their resistance against the party's totalitarian impulses She explains why many German scientists and engineers who were deported to the Soviet Union after World War II returned to East Germany rather than defecting to the capitalist West traces scientists attempts to hold on to some aspects of professional autonomy and describes challenges to their professional identity on the factory floor Augustine examines the quality of science and technology produced under Communist rule looking at failed research projects and clashing cultures of innovation She looks at technological myth building in science fiction and propaganda She explores individual career strategies including the role played by gender in high tech professions and the ways that both enterprises and individuals responded to increasing state and party control of research during the 1980s We cannot understand the economic choices made by East Germany Augustine argues unless we understand the cultural values reflected in the East German belief in technology as indispensable to progress and industrial development

Being Nuclear Gabrielle Hecht, 2014-08-29 The hidden history of African uranium and what it means for a state an object an industry a workplace to be nuclear Uranium from Africa has long been a major source of fuel for nuclear power and atomic weapons including the bomb dropped on Hiroshima In 2003 after the infamous yellow cake from Niger Africa suddenly became notorious as a source of uranium a component of nuclear weapons But did that admit Niger or any of Africa's other uranium producing countries to the select society of nuclear states Does uranium itself count as a nuclear thing In this book Gabrielle Hecht lucidly probes the question of what it means for something a state an object an industry a workplace to be nuclear Hecht shows that questions about being nuclear a state that she calls nuclearity lie at the heart of today's global nuclear order and the relationships between developing nations often former colonies and nuclear powers often former colonizers Hecht enters African nuclear worlds focusing on miners and the occupational hazard of radiation exposure Could a mine be a nuclear workplace if as in some South African mines its radiation levels went undetected and unmeasured With this book Hecht is the first to put Africa in the nuclear world and the nuclear world in Africa By doing so she remakes our understanding of the nuclear age

Contesting The Future Of Nuclear Power: A Critical Global Assessment Of Atomic Energy Benjamin K Sovacool, 2011-05-05 This book provides a concise but rigorous appraisal about the future of nuclear power and the presumed nuclear renaissance It does so by assessing the technical economic environmental political and social risks related to all aspects of the nuclear fuel cycle from uranium mills and mines to nuclear reactors and spent fuel storage facilities In each case the book argues that the costs of nuclear power significantly outweigh its benefits It concludes by calling for investments in renewable energy and energy efficiency as a better path towards an affordable secure and socially acceptable future The prospect of a global nuclear renaissance could

change the way that energy is produced and used the world over Sovacool takes a hard look at who would benefit mostly energy companies and manufacturers and who would suffer mostly taxpayers those living near nuclear facilities and electricity customers This book is a must read for anyone even remotely concerned about a sustainable energy future and also for those with a specific interest in modern nuclear power plants

Well-Oiled Diplomacy Adam N. Stulberg, As a window into understanding the relationship between globalization and the pursuit of national security Adam N Stulberg examines Russia's mixed success at leveraging energy advantages in Eurasia from 1992 to 2002 Stulberg supplements traditional analyses of statecraft by highlighting indirect market and regulatory mechanisms for altering the behavior of foreign and subnational actors as well as by demonstrating the usability of soft power and global networks The power of this new theory of strategic manipulation is illustrated in several case studies including Russia's successful natural gas diplomacy toward Turkmenistan and Kazakhstan Russia's troubled oil diplomacy toward Azerbaijan and Kazakhstan and Russia's mixed success with commercial nuclear diplomacy toward Kyrgyzstan and Kazakhstan

Meeting the Demands of Reason Jay Bergman, 2011-03-15 The Soviet physicist dissident and human rights activist Andrei Sakharov 1921-1989 was awarded the Nobel Peace Prize in 1975 The first Russian to have been so recognized Sakharov in his Nobel lecture held that humanity had a sacred endeavor to create a life worthy of its potential that we must make good the demands of reason by confronting the dangers threatening the world both then and now nuclear annihilation famine pollution and the denial of human rights *Meeting the Demands of Reason* provides a comprehensive account of Sakharov's life and intellectual development focusing on his political thought and the effect his ideas had on Soviet society Jay Bergman places Sakharov's dissidence squarely within the ethical legacy of the nineteenth century Russian intelligentsia inculcated by his father and other family members from an early age In 1948 one year after receiving his doctoral candidate's degree in physics Sakharov began work on the Soviet hydrogen bomb and later received both the Stalin and the Lenin prizes for his efforts Although as a nuclear physicist he had firsthand experience of honors and privileges inaccessible to ordinary citizens Sakharov became critical of certain policies of the Soviet government in the late 1950s He never renounced his work on nuclear weaponry but eventually grew concerned about the environmental consequences of testing and feared unrestrained nuclear proliferation Bergman shows that these issues led Sakharov to see the connection between his work in science and his responsibilities to the political life of his country In the late 1960s Sakharov began to condemn the Soviet system as a whole in the name of universal human rights By the 1970s he had become with Alexander Solzhenitsyn the most recognized Soviet dissident in the West which afforded him a measure of protection from the authorities In 1980 however he was exiled to the closed city of Gorky for protesting the Soviet invasion of Afghanistan In 1986 the new Gorbachev regime allowed him to return to Moscow where he played a central role as both supporter and critic in the years of perestroika Two years after Sakharov's death the Soviet Union collapsed and in the courageous example of his unyielding commitment to human rights skillfully recounted by

Bergman Sakharov remains an enduring inspiration for all those who would tell truth to power *Fact and Fiction in Global Energy Policy* Benjamin K. Sovacool, Marilyn A. Brown, Scott V. Valentine, 2016-04-29 A balanced examination of global energy issues Energy sustainability and climate change are two of the greatest challenges facing humankind Unraveling these complex and interconnected issues demands careful and objective assessment Fact and Fiction in Global Energy Policy aims to change the prevailing discourse by examining fifteen core energy questions from a variety of perspectives demonstrating how for each of them no clear cut answer exists Is industry the chief energy villain Can we sustainably feed and fuel the planet at the same time Is nuclear energy worth the risk Should geoengineering be outlawed Touching on pollution climate mitigation and adaptation energy efficiency government intervention and energy security the authors explore interrelated concepts of law philosophy ethics technology economics psychology sociology and public policy This book offers a much needed critical appraisal of the central energy technology and policy dilemmas of our time and the impact of these on multiple stakeholders **Eurasian Environments** Nicholas Breyfogle, 2018-11-06 Through a series of essays Eurasian Environments prompts us to rethink our understanding of tsarist and Soviet history by placing the human experience within the larger environmental context of flora fauna geology and climate This book is a broad look at the environmental history of Eurasia specifically examining steppe environments hydraulic engineering soil and forestry water pollution fishing and the interaction of the environment and disease vectors Throughout the authors place the history of Imperial Russia and the Soviet Union in a trans chronological comparative context seamlessly linking the local and the global The chapters are rooted in the ecological and geological specificities of place and community while unveiling the broad patterns of human nature relationships across the planet Eurasian Environments brings together an international group of scholars working on issues of tsarist Soviet environmental history in an effort to showcase the wave of fascinating and field changing research currently being written **Essays on Twentieth-Century History** Michael Adas, American Historical Association, 2010-05-28 Probing the paradoxes of the long twentieth century Unprecedented human opportunity and deprivation to the rise of the United States as a hegemon The Soviet Sixties Robert Hornsby, 2023-09-26 The story of a remarkable era of reform controversy optimism and Cold War confrontation in the Soviet Union Beginning with the death of Stalin in 1953 the sixties era in the Soviet Union was just as vibrant and transformative as in the West The ideological romanticism of the revolutionary years was revived with renewed emphasis on egalitarianism equality and the building of a communist utopia Mass terror was reined in great victories were won in the space race Stalinist cultural dogmas were challenged and young people danced to jazz and rock and roll Robert Hornsby examines this remarkable and surprising period showing that even as living standards rose aspects of earlier days endured Censorship and policing remained tight and massacres during protests in Tbilisi and Novocherkassk alongside invasions of Hungary and Czechoslovakia showed the limits of reform The rivalry with the United States reached perhaps its most volatile point friendship with China turned to

bitter enmity and global decolonization opened up new horizons for the USSR in the developing world These tumultuous years transformed the lives of Soviet citizens and helped reshape the wider world

Toxicants, Health and Regulation since 1945 Nathalie Jas, Soraya Boudia, 2015-10-06 The number of substances potentially dangerous to our health and environment is constantly increasing The papers in this volume examine the concurrent rise of pollutants and the regulations designed to police their use

The Politics of Invisibility Olga Kuchinskaya, 2014-07-25 Lessons from the massive Chernobyl nuclear accident about how we deal with modern hazards that are largely imperceptible Before Fukushima the most notorious large scale nuclear accident the world had seen was Chernobyl in 1986 The fallout from Chernobyl covered vast areas in the Northern Hemisphere especially in Europe Belarus at the time a Soviet republic suffered heavily nearly a quarter of its territory was covered with long lasting radionuclides Yet the damage from the massive fallout was largely imperceptible contaminated communities looked exactly like noncontaminated ones It could be known only through constructed

representations of it In *The Politics of Invisibility* Olga Kuchinskaya explores how we know what we know about Chernobyl describing how the consequences of a nuclear accident were made invisible Her analysis sheds valuable light on how we deal with other modern hazards toxins or global warming that are largely imperceptible to the human senses Kuchinskaya describes the production of invisibility of Chernobyl's consequences in Belarus practices that limit public attention to radiation and make its health effects impossible to observe Just as mitigating radiological contamination requires infrastructural solutions she argues the production and propagation of invisibility also involves infrastructural efforts from redefining the scope and nature of the accident's consequences to reshaping research and protection practices Kuchinskaya finds vast fluctuations in recognition tracing varyingly successful efforts to conceal or reveal Chernobyl's consequences at different levels among affected populations scientists government media and international organizations The production of invisibility she argues is a function of power relations
