Red Circle:

Red Circle Stephen Chen, 2009 *Red Circle China and Me* 1949 2009 tells the fascinating story of Stephen Chen and his family. It sketches the history of the People's Republic of China not merely as a backdrop but as the driving force of the book's action. *Red Circle* chronicles the rise and fall and rise again of an extraordinary family. At the same time it is only one of countless stories that could be told by many millions of Chinese. It tells of the hope, turmoil and terror in the first 30 years of the PRC and of the transformation, transition and achievement in the last 30 years. *Red Circle* is the first work of its kind to cover the making of modern China. The 60 year cycle encompassed by *Red Circle* is the basis of the traditional Chinese calendar, astrology and cosmology. The cyclical nature of life and a return to one's roots are fundamental elements in Stephen's story. The ways in which his life reflects and completes that of his father, the stunning symmetries and recurring cycles of *Red Circle* make for a remarkable read. Stephen has seen China from a range of vantage points that few others have experienced. From the palace he grew up in to brutal labor camps to corporate boardrooms from stark prisons to secret government offices, Stephen has witnessed history. *Red Circle* is however more than the tale of how a family survives or a nation emerges. At its heart, *Red Circle* is a thrilling testament to the indomitable will and unconquerable spirit of the individual.

Uncreative Writing Kenneth Goldsmith, 2011-08-16. Can techniques traditionally thought to be outside the scope of literature including word processing, databasing, identity, ciphering and intensive programming inspire the reinvention of writing? The Internet and the digital environment present writers with new challenges and opportunities to reconceive creativity, authorship and their relationship to language. Confronted with an unprecedented amount of texts and language, writers have the opportunity to move beyond the creation of new texts and manage, parse, appropriate and reconstruct those that already exist. In addition to explaining his concept of uncreative writing, which is also the name of his popular course at the University of Pennsylvania, Goldsmith reads the work of writers who have taken up this challenge. Examining a wide range of texts and techniques including the use of Google searches to create poetry, the appropriation of courtroom testimony and the possibility of robo-poetics, Goldsmith joins this recent work to practices that date back to the early twentieth century. Writers and artists such as Walter Benjamin, Gertrude Stein, James Joyce and Andy Warhol embodied an ethos in which the construction or conception of a text was just as important as the resultant text itself. By extending this tradition into the digital realm, uncreative writing offers new ways of thinking about identity and the making of meaning.

Circles, Spheres and Spherical Geometry Hiroshi Maehara, Horst Martini, 2024-08-09. This textbook focuses on the geometry of circles, spheres and spherical geometry. Various classic themes are used as introductory and motivating topics.

The book begins very simply for the reader in the first chapter discussing the notions of inversion and stereographic projection. Here various classical topics and theorems such as Steiner's cycles, inversion, Soddy's hexlet, stereographic projection, and Poncelet's porism are discussed. The book then delves into Bend formulas and the relation of radii of circles, focusing on Steiner circles mutually tangent four circles in the plane and other related notions. Next, some fundamental concepts of graph theory are explained. The book then proceeds to explore orthogonal cycle representation of quadrangulations, giving detailed discussions of the Brightwell-Scheinerman theorem, an extension of the Koebe-Andreev-Thurston theorem, Newton's 13 balls problem, Casey's theorem, an extension of Ptolemy's theorem, and its generalizations. The remainder of the book is devoted to spherical geometry, including a chapter focusing on geometric probability on the sphere. The book also contains new results of the authors and insightful notes on the existing literature, bringing the reader closer to the research front. Each chapter concludes with related exercises of varying levels of difficulty. Solutions to selected exercises are provided. This book is suitable to be used as a textbook for a geometry course or alternatively as a basis for a seminar for both advanced undergraduate and graduate students alike.

Thinking and Reasoning (Psychology Revivals) Jonathan St. B. T. Evans, 2013-12-19 The subject of thinking is the oldest in the whole science of psychology, going back to well before the separation of the disciplines of philosophy and psychology. Originally published in 1983, this collection of up-to-date critical essays about thinking, with particular emphasis on reasoning, is written from the perspective of psychologists who are themselves actively engaged in research into the nature of human thought. The editor's introduction identifies the major issues which have traditionally concerned students of human thought and provides an historical background. It describes how at first the subject was studied by introspection and how this method fell into disrepute at the end of last century. A satisfactory alternative has not yet emerged, although much recent work is based on the information processing model which sees the brain as a sophisticated computer. Consequently, the papers presented in this volume deal with a wide range of issues and a number of different experimental tasks and paradigms. They cover most current approaches to the theory and methodology of cognitive psychology, including problem solving, the relationship between language and thought, and reasoning.
