Eyes Open Level 2 Student's Book Ben Goldstein, Ceri Jones, Emma Heyderman, 2015-05-21 Developed in partnership with Discovery Education, Eyes Open features stimulating global topics to motivate students and spark their curiosity. Guided step by step activities and personalised learning tasks lead to greater speaking and writing fluency. The Odd Body Stephen Juan, 2004-08 If you've ever had a question about your body, maybe one you're afraid to ask, this book is for you. Things like why we yawn, why skin wrinkles after a bath, or even whether it's possible to keep a severed head alive. The Odd Body explains these and many other silly, weird, bizarre, and fascinating body mysteries. Dr. Stephen Juan entertains and rivets readers with his detailed answers. Reading The Odd Body is like having your doctor patiently answer all your random questions one by one. But Dr. Juan goes well beyond the usual and ordinary things people wonder about bodies, like why most individuals are right-handed or why you get chills when chalk screeches across a blackboard. He also tells readers how a dead body is made into a mummy, the success rate of those who bore holes in their own heads to relieve headaches, and much much more. The Odd Body is a unique combination of fun and fascinating material that's delivered by an expert who happens to be a great storyteller. The book's question and answer format makes it easy to pick up, turn to any page, and immediately become drawn into the intricacies of anatomy and physiology while gaining a better understanding of the human need to know more about ourselves. **Improving Bayesian Reasoning: What Works and Why?** Gorka Navarrete, David R.

Mandel, 2016-02-02 We confess that the first part of our title is somewhat of a misnomer. Bayesian reasoning is a normative approach to probabilistic belief revision, and as such it is in need of no improvement. Rather, it is the typical individual whose reasoning and judgments often fall short of the Bayesian ideal who is the focus of improvement. What have we learnt from over a half century of research and theory on this topic that could explain why people are often non-Bayesian? Can Bayesian reasoning be facilitated, and if so, why? These are the questions that motivate this *Frontiers in Psychology Research Topic*. Bayes' theorem, named after English statistician, philosopher, and Presbyterian minister Thomas Bayes, offers a method for updating one's prior probability of an hypothesis H on the basis of new data D such that $P(H|D) = \frac{P(D|H)P(H)}{P(D)}$. The first wave of psychological research, pioneered by Ward Edwards, revealed that people were overly conservative in updating their posterior probabilities, i.e. $P(D|H)A$. A second wave, spearheaded by Daniel Kahneman and Amos Tversky, showed that people often ignored prior probabilities or base rates where the priors had a frequentist interpretation and hence were not

Bayesians at all In the 1990s a third wave of research spurred by Leda Cosmides and John Tooby and by Gerd Gigerenzer and Ulrich Hoffrage showed that people can reason more like a Bayesian if only the information provided takes the form of non relativized natural frequencies Although Kahneman and Tversky had already noted the advantages of frequency representations it was the third wave scholars who pushed the prescriptive agenda arguing that there are feasible and effective methods for improving belief revision Most scholars now agree that natural frequency representations do facilitate Bayesian reasoning However they do not agree on why this is so The original third wave scholars favor an evolutionary account that posits human brain adaptation to natural frequency processing But almost as soon as this view was proposed other scholars challenged it arguing that such evolutionary assumptions were not needed The dominant opposing view has been that the benefit of natural frequencies is mainly due to the fact that such representations make the nested set relations perfectly transparent Thus people can more easily see what information they need to focus on and how to simply combine it This Research Topic aims to take stock of where we are at present Are we in a proto fourth wave If so does it offer a synthesis of recent theoretical disagreements The second part of the title orients the reader to the two main subtopics what works and why In terms of the first subtopic we seek contributions that advance understanding of how to improve people s abilities to revise their beliefs and to integrate probabilistic information effectively The second subtopic centers on explaining why methods that improve non Bayesian reasoning work as well as they do In addressing that issue we welcome both critical analyses of existing theories as well as fresh perspectives For both subtopics we welcome the full range of manuscript types
