Reflecting Visions:

Vision, Reflection, and Desire in Western Painting David Summers, 2015-12-01 Spanning more than 2 500 years in the history of art Vision Reflection and Desire in Western Painting demonstrates how the rise and diffusion of the science of optics in ancient Greece and the Mediterranean world correlated to pictorial illusion in the development of Western painting from Hellenistic Greece to the present Using examples from the late Middle Ages and the Renaissance David Summers argues that scene painting architectural backdrops and shadow painting in which forms are modeled or shown as if in relation to a source of light not only evolved in close association with geometric optics toward the end of the fifth century B C E but also contributed substantially to the foundations of the new science The spread of understanding of how light is transmitted reflected and refracted is evident in the works of artists such as Brunelleschi van Eyck Alberti and Leonardo The interplay between optics and painting that influenced the course of Western art Summers says persisted as a framework for the realism of Caravaggio Rembrandt and Goya and continues today in modern photography and film Galileo's Visions Marco Piccolino, Nicholas J. Wade, 2013-12-05 Galileo is known as a pioneer of science especially of mechanics and astronomy but far less attention has been paid to his work on the senses generally and more specifically on vision In this book two experts on the history of science look at the novel ways in which Galileo looked at the heavens through his telescope and in the process emphasised the importance of contrast phenomena and visual resolution for all observations He also described the senses and perception in terms that found an echo in doctrines advanced by nineteenth century sensory physiologists In a fascinating and accessible style Marco Piccolino and Nick Wade analyse the scientific and philosophical work of Galileo Galilei from the particular viewpoint of his approach to the senses and especially vision as a means of acquiring trustworthy knowledge about the constitution of the world For Galileo evidence from the senses was potentially ambiguous hence reliable information capable of penetrating the complexity of reality could only be obtained by interpreting the sensory data critically The philosophical background of Galileo s attitude to the senses was his awareness that nature had not developed a specific language aimed at communicating with senses generally and human senses in particular Galileo s analysis of the senses corresponded closely to a fundamental tenet of modern sensory physiology and psychophysics the absence in the world of specific sensory signals like sounds colours tastes and odours Fully illustrated throughout this book is an important contribution to psychology and the vision sciences but more broadly to our knowledge of a pioneering figure in the history of science *The Spirit World: A Guide to Communicating Beyond the Veil* Vikki Strack, In the tapestry of human experience the threads of life and death intertwine creating a fascinating and often perplexing landscape For centuries humanity has grappled with the mysteries of the afterlife seeking answers and solace in the face of mortality The spirit world a realm beyond our physical senses has captivated imaginations and inspired countless stories rituals and beliefs This book serves as a guide to navigating the enigmatic world of spirits offering a respectful and informed approach to communication with the

other side It is not a definitive answer to the complexities of the afterlife but rather an invitation to explore the fascinating world of mediumship Ouija boards and other spiritual practices Through a blend of historical insights practical techniques and personal anecdotes this book aims to shed light on the nuances of the spirit realm and equip readers with the tools and knowledge to embark on their own journey of exploration This is not just a book about communicating with spirits it is a journey of self discovery spiritual growth and a deeper understanding of the interconnectedness of all beings Whether you are a seasoned seeker or a curious beginner *The Spirit World A Guide to Communicating Beyond the Veil* provides a valuable resource for those seeking to bridge the gap between the physical and spiritual realms

Development and Faith Katherine Marshall, Marisa Bronwyn Van Saanen, 2007 Publisher's description The faith and development nexus is both a promising new focus for secular development agencies and a historic reality for centuries world faiths and individuals inspired by their faith have played many roles in social change and social welfare Secular development agencies have largely operated in parallel to the world of faith motivated development The World Bank began in the late 1990s to explore ways in which faith and development are connected The issue was not and is not about religion but about the recognition that some of the best experts on development are faith leaders living and working in poor communities where strong ties and moral authority give them unique experience and insight The World Bank's goal is to act as a catalyst and convenor bringing together development practitioners to find common ground understand one another's efforts and explore differences Development and Faith explores and highlights promising partnerships in the world between secular and faith development entities It recounts the evolving history of relationships between faith and secular development institutions It focuses on the Millennium Development Goals as a common framework for action and an opportunity for new forms of collaboration and partnership
