Reflections From Origin:

Reflections from the Origin Aryn Dahya, 1997-01-01 *Theory and Practice of Direct Methods in Crystallography* M. F. C. Ladd, R. A. Palmer, 2012-12-06 Direct methods of crystal structure determination are usually associated with techniques in which phases for a set of structure factors are determined from the corresponding experimental amplitudes by probabilistic calculations. It is thus implied that such *ab initio* phase calculations do not require a knowledge of atomic positions and this basis distinguishes direct methods from other techniques for structure determination. An acceptably wider interpretation of the term direct methods leads to other important applications involving *inter alia* the use of heavy atoms, resolution limited phase data for large molecules, rotation functions and Fourier series. These topics are discussed in the later chapters of this book. Although some earlier theoretical investigations were made by Harker and Kaspar, direct methods may be considered to have begun around the year 1950. Important landmarks in the development of the subject include the book by Hauptmann and Karle, *The Centrosymmetric Crystal* 1953, the definitive paper by Karle and Karle in *Acta Crystallographica* 1966 and the recent 1978 sophisticated program package MULTAN 78 produced mainly by Germain, Main and Woolfson. Woolfson's book *Direct Methods in Crystallography* was published in 1961 but because of the rapid progress in direct methods much of it soon became outmoded. It is interesting to note that direct methods nearly came into being many years earlier. Certainly the E2 relationship was used implicitly by Lonsdale in 1928 in determining the crystal structure of hexamethylbenzene. **Parables**

from the Origin Aryn Dahya, 1999 **The Origin of Love** Ryūhō Ōkawa, 2003 Love is what we all admire; it is our ideal. True love is revealed in the beauty and brightness of our souls. Love begins with the idea that we all originated from one God and that we are essentially one with others. Why do people love each other or hate each other? In this book spiritual teacher Ryuho Okawa answers this question by referring to the origin of love in relation to the secret of eternal life. When you understand the Truth about love, you will be awakened to the wonder of being given life and you will be filled with love for those around you. **Crystal Structure Determination** Werner Massa, 2013-03-09 To solve a crystal structure means to determine the precise spatial arrangements of all of the atoms in a chemical compound in the crystalline state. This knowledge gives a chemist access to a large range of information including connectivity, conformation and accurate bond lengths and angles. In addition, it implies the stoichiometry, the density, the symmetry and the three-dimensional packing of the atoms in the solid. Since interatomic distances are in the region of 100–300 pm or 1–3 Å, microscopy using visible light (wavelength ca. 300–700 nm) is not applicable. Fig. 1.1 In 1912 Max von Laue showed that crystals are based on a three-dimensional lattice which scatters radiation with a wavelength in the vicinity of interatomic distances, i.e. X-rays with 50–300 pm. The process by which this radiation without changing its wavelength is converted through interference by the lattice to a vast number of observable reflections with characteristic directions in space is called X-ray diffraction. The method by which the directions and the intensities of these reflections are measured and the ordering of the atoms in the crystal deduced from

them is called X ray structure analysis The following chapter deals with the lattice properties of crystals the starting point for the explanation of these interference phenomena Interatomic distances Crystals

The Origin of Humanness in the Biology of Love Humberto Maturana Romesín, Gerda Verden-Zöller, 2012-02-21 The central concern of this book is us human beings The authors basic question is How is it that we can live in mutual care have ethical concerns and at the same time deny all that through the rational justification of aggression The authors answer this basic question indirectly by providing a look into the fundamentals of our biological constitution concentrating on what they term emotioning that is the flow of emotions in daily life that guides the flow of the systemic conservation of a manner of living Maturana and Verden Zöller claim that the fundamental emotion that gave rise to humans as sapient languaging beings was love and that this remains our fundament even when other emotions become socially prevalent

Electron Crystallography Xiaodong Zou, Sven Hovmöller, Peter Oleynikov, 2011-08-18 In the modern world of ever smaller devices and nanotechnology electron crystallography emerges as the most important method capable of determining the structure of minute objects down to the size of individual atoms Crystals of only a few millionths of a millimetre are studied This is the first textbook explaining how this is done Great attention is given to symmetry in crystals and how it manifests itself in electron microscopy and electron diffraction and how this symmetry can be determined and taken advantage of in achieving improved electron microscopy images and solving crystal structures from electron diffraction patterns Theory and practice are combined experimental images diffraction patterns formulae and numerical data are discussed in parallel giving the reader a complete understanding of what goes on inside the black boxes of computer programs This up to date textbook contains the newest techniques in electron crystallography including detailed descriptions and explanations of the recent remarkable successes in determining the very complex structures of zeolites and intermetallics The controversial issue of whether there is phase information present in electron microscopy images or not is also resolved once and for all The extensive appendices include computer labs which have been used at various courses at Stockholm University and international schools in electron crystallography with applications to the textbook Students can download image processing programs and follow these lab instructions to get a hands on experience of electron crystallography

Silver, Graziella Pagliarulo McCarron, 2024-05-31 Over 5 million college students in the United States nearly one in three students currently enrolled are of immigrant origin meaning they are either the children of immigrant parents or guardians and or immigrants themselves These students accounted for almost 60% of the growth in higher education enrolment in the 21st century Nevertheless there is very little research dedicated to this student population s specific experiences of postsecondary education with similar absences discernible within the realms of higher education policy and practice Although college campuses are making important progress in building more inclusive spaces conversations about climate and student care rarely account for the journeys of students of immigrant origin Featuring 20 chapters written by more than 50 contributors this book addresses this glaring omission The authors examine how students of immigrant origin experience the road to through and beyond higher education while simultaneously speaking to evidence based implications for policy research and practice **Direct Methods for Solving Macromolecular Structures** S. Fortier, 2013-06-29 This book of the proceedings of the 1997 NATO Advanced Study Institute ASI on Direct Methods for Solving Macromolecular Structures was assembled from the lecturers contributions and represents a comprehensive and in depth overview of crystallographic structure determination methods for macromolecules While having a focus based on the direct methods the Institute adopted an inclusive and broad perspective Thus both direct and experimental phasing techniques are presented in this book highlighting their complementarities and synergies As well methodologies spanning the full crystallographic image reconstruction process from low resolution envelope definition to high resolution atomic refinement are discussed The first part of the book introduces the array of tools currently used in structure determination whether originating from a mathematical computational or experimental framework This section of the book displays the variety and ingenuity of old and new phasing approaches developed to solve increasingly complex structures Some of the contributions focus on recent developments and or implementations that have given older approaches a new life A case in

point is the re implementation of Buerger s superposition approach which is now solving protein structures Another beautiful example is found in the introduction to the traditional multiple isomorphous replacement approach where new techniques such as site directed mutagenesis and the use of inert gases in the preparation of heavy atom derivatives are described Equally impressive are the presentations of newer approaches which take advantage of advances on the experimental front e
