Cell Culture Engineering Wei-Shu Hu,2006-08-16 Since the introduction of recombinant human growth hormone and insulin a quarter century ago protein therapeutics has greatly broadened the ho zon of health care Many patients suffering with life threatening diseases or chronic dysfunctions which were medically untreatable not long ago can attest to the wonder these drugs have achieved Although the rst generation of p tein therapeutics was produced in recombinant Escherichia coli most recent products use mammalian cells as production hosts Not long after the rst p duction of recombinant proteins in E coli it was realized that the complex tasks of most post translational modi cations on proteins could only be ef ciently carried out in mammalian cells In the 1990s we witnessed a rapid expansion of mammalian cell derived protein therapeutics chie y antibodies In fact it has been nearly a decade since the market value of mammalian cell derived protein therapeutics surpassed that of those produced from E coli A common characteristic of recent antibody products is the relatively large dose required for effective therapy demanding larger quantities for the treatment of a given disease This coupled with the broadening repertoire of protein drugs has rapidly expanded the quantity needed for clinical applications The increasing demand for protein therapeutics has not been met exclusively by construction of new manufacturing plants and increasing total volume capacity More portantly the productivity of cell culture processes has been driven upward by an order of magnitude in the past decade

Tissue and Organ Regeneration in Adults Ioannis V. Yannas,2014-11-21 This textbook describes the basic principles of induced organ regeneration in skin and peripheral nerves and extends the original successful paradigm to other organs A set of trans organ rules is established and its use in regeneration of several organs is illustrated from the works of several independent investigators who worked with a variety of organs such as the lung the bladder and the Achilles tendon using collagen based scaffolds somewhat similar to the original one These critical medical treatments fill the clinical need that is not met by organ transplantation New to this second edition New information extending the paradigm of tissue regeneration from organ regeneration in skin and peripheral nerves to other organs Guidelines known as trans organ rules are described for the first time for extending this unique medical treatment to organs of several medical specialties The work serves as a comprehensive text and reference for students and practitioners of tissue engineering
