Edward D. Korn, 2012-12-06 Volume 3 continues the approach carried out in the first two volumes of this series of publishing  
articles on membrane methodology which include in addition to procedural details incisive discussions of the applications of  
the methods and of their limitations What is the theoretical basis of the method how and to what problems can it be applied  
how does one interpret the results what has thus far been achieved by the method what lies in the future these are the  
questions the authors have tried to answer No area of membrane biology engages the interest of more investigators than  
studies of the plasma membrane Four chapters in this volume are concerned with one or more aspects of the cell surface  
Fundamental to all studies of the cell surface are the isolation and characterization of pure plasma membranes Many  
preparations described in the literature are inadequate or are inadequately characterized In the first chapter Neville  
discusses the theoretical and practical bases of tissue fractionation emphasizes the variations in enzyme content among  
plasma membranes from different sources offers guidance in the choice of the proper criteria for assessing membrane purity  
and suggests the best markers for detecting the possible presence of contaminating organelles To review in detail each of the  
many preparations of plasma membranes that have been published is impossible      **Literature Search** National Library of
