 standard cable model is introduced followed by statics force distribution and stiffness Inverse and forward kinematics are
 addressed by elaborating efficient algorithms Furthermore the workspace is introduced and different algorithms are detailed
 The book contains the dynamic equations as well as simulation models with applicable parameters Advanced cable models
 are described taking into account pulleys elastic cables and sagging cables For practitioner a descriptive design method is
 stated including methodology parameter synthesis construction design component selection and calibration Rich examples
 are presented by means of simulation results from sample robots as well as experimental validation on reference
 demonstrators The book contains a representative overview of reference demonstrator system Tables with physical
 parameters for geometry cable properties and robot parameterizations support case studies and are valuable references for
 building custom cable robots For scientist the book provides the starting point to address new scientific challenges as open
 problems are named and a commented review of the literature on cable robot with more than 500 references are given
