Arthur Spiethoff and the German Historical School of Economics Vitantonio Gioia,2024-04-02 Arthur Spiethoff 1873 1957 an economist of the German Historical School of Economics is best known for his theory of the business cycle Despite Spiethoff calling for a unified reading of his work his epistemological thinking has received less attention This book addresses that gap by analysing Spiethoff s theory of the business cycle in the light of his epistemological views Putting Spiethoff s work in context the book also investigates the most significant features of the evolution of the research programme of the German Historical School of Economics with particular reference to the relationships between Schmoller Sombart Weber and Spiethoff In addition Spiethoff s work is compared with some of the scientific orientations of the current debates on the epistemological side the book examines the relationship between Spiethoff s views and some contemporary thinking on scientific realism as well as methodological pluralism in social sciences And more broadly it emphasises the analytical relevance of the historical approach in explaining the economic imbalances of contemporary capitalism questioning the idea widespread in the neoclassical approach that taking historical specificities into account makes it hard to achieve a theoretically effective attitude This book is a significant addition to the literature on the German Historical School of Economics and the history of economic thought business cycle theory and macroeconomics more broadly

Shifting Paradigms in Public Health Vijay Kumar Yadavendu,2013-12-09 This transdisciplinary volume outlines the development of public health paradigms across the ages in a global context and argues that public health has seemingly lost its raison d tre that is a population perspective The older philosophical approach in public health involved a holistic population based understanding that emphasized historicity and interrelatedness to study health and disease in their larger socio economic and political moorings A newer tradition which developed in the late 19th century following the acceptance of the germ theory in

medicine created positivist transitions in epidemiology In the form of risk factors a reductionist model of health and disease became pervasive in clinical and molecular epidemiology The author shows how positivism and the concept of individualism removed from public health thinking the consideration of historical social and economic influences that shape disease occurrence and the interventions chosen for a population He states that the neglect of the multifactorial approach in contemporary public health thought has led to growing health inequalities in both the developed and the developing world He further suggests that the concept of social capital in public health which is being hailed as a resurgence of holism is in reality a sophisticated and extended version of individualism The author presents the negative public policy consequences and implications of adopting methodological individualism through a discussion on AIDS policies The book strongly argues for a holistic understanding and the incorporation of a rights perspective in public health to bring elements of social justice and fairness in policy formulations

, Rethinking Expectations Roman Frydman, Edmund S. Phelps, 2013-01-23 This book originated from a 2010 conference marking the fortieth anniversary of the publication of the landmark Phelps volume Microeconomic Foundations of Employment and Inflation Theory a book that is often credited with pioneering the currently dominant approach to macroeconomic analysis However in their provocative introductory essay Roman Frydman and Edmund Phelps argue that the vast majority of macroeconomic and finance models developed over the last four decades derailed rather than built on the Phelps volume's microfoundations approach Whereas the contributors to the 1970 volume recognized the fundamental importance of according market participants expectations an autonomous role contemporary models rely on the rational expectations hypothesis REH which rules out such a role by design The financial crisis that began in 2007 preceded by a spectacular boom and bust in asset prices that REH models implied could never happen has spurred a quest for fresh approaches to macroeconomic analysis While the alternatives to REH presented in Rethinking Expectations differ from the approach taken in the original Phelps volume they are notable for returning to its major theme understanding aggregate

outcomes requires according expectations an autonomous role In the introductory essay Frydman and Phelps interpret the various efforts to reconstruct the field some of which promise to chart its direction for decades to come The contributors include Philippe Aghion Sheila Dow George W Evans Roger E A Farmer Roman Frydman Michael D Goldberg Roger Guesnerie Seppo Honkapohja Katarina Juselius Enisse Kharroubi Blake LeBaron Edmund S Phelps John B Taylor Michael Woodford and Gylfi Zoega
