Progress In Image Analysis And Processing Ii - Proceedings Of The 6th International Conference Virginio

Cantoni,Stefano Levialdi,M Ferretti,R Negrini,R Stefanelli,1992-06-08 This book presents reports by well known experts on the most recent research results in image coding analysis and understanding and promising applications for solving real problems in manufacturing remote sensing and biomedicine The topics covered include shape analysis and computer vision pattern recognition methods and applications parallel computer architectures for image processing and analysis human perception and use of artificial intelligence techniques for image understanding languages for image abstraction processing and retrieval vision modules and neural computation *Topological Algorithms for Digital Image Processing* T.Y. Kong,A. Rosenfeld,1996-07-17 Basic topological algorithms are the subject of this new book It presents their underlying theory and discusses their applications Due to the wide variety of topics treated in the seven chapters no attempt has been made to standardize the notation and terminology used by the authors Each chapter however is self contained and can be read independently of the others Some of the basic terminology and fundamental concepts of digital topology are reviewed in the appendix which also describes important areas of the field A bibliography of over 360 references is also provided The notations and terminologies used in this book will serve to introduce readers to the even wider variety that exists in the

voluminous literature dealing with topological algorithms Dynamic Reconfigurable Network-on-Chip Design: Innovations for Computational Processing and Communication Shen, Jih-Sheng, Hsiung, Pao-Ann, 2010-06-30 Reconfigurable computing brings immense flexibility to on chip processing while network on chip has improved flexibility in on chip communication Integrating these two areas of research reaps the benefits of both and represents the promising future of multiprocessor systems on chip This book is the one of the first compilations written to demonstrate this future for network on chip design Through dynamic and creative research into questions ranging from integrating reconfigurable computing techniques to task assigning scheduling and arrival to designing an operating system to take advantage of the computing and communication flexibilities brought about by run time reconfiguration and network on chip it represents a complete source of the techniques and applications for reconfigurable network on chip necessary for understanding of future of this field *Piecewise Regular Arrays* Thomas P Plaks, 1999-02-22 Application specific regular array processors have been widely used in signal and image processing multimedia and communication systems for example in data compression and HDTV One of the main problems of application specific computing is how to map algorithms into hardware The major achievement of the theory of regular arrays is that an algorithm represented as a data dependence graph is embedded into a Euclidean space where the integer points are the elementary computations and the dependencies between computations are denoted by vectors between points The process of mapping an algorithm into hardware is reduced to finding for the given Euclidean space a new coordinate system that can be associated with the physical properties of space and time so called space time The power of the synthesis method is that it provides a bridge between abstract and physical representations of algorithms thus providing a methodological basis for synthesizing computations in space and in time This book will extend the existing synthesis theory by exploiting the associativity and commutativity of computations The practical upshot being a controlled increase in the dimensionality of the Euclidean space representing an algorithm This increase delivers more degrees of freedom in the choice of the space time mapping and leads subsequently to more choice in the selection of cost effective application specific designs *High-Performance Computing Using FPGAs* Wim Vanderbauwhede, Khaled Benkrid, 2013-08-23 High Performance Computing using FPGA covers the area of high performance reconfigurable computing HPRC This book provides an overview of architectures tools and applications for High Performance Reconfigurable Computing HPRC FPGAs offer very high I O bandwidth and fine grained custom and flexible parallelism and with the ever increasing computational needs coupled with the frequency power wall the increasing maturity and capabilities of FPGAs and the advent of multicore processors which has caused the acceptance of parallel computational models The Part on architectures will introduce different FPGA based HPC platforms attached co processor HPRC architectures such as the CHREC s Novo G and EPCC s Maxwell systems tightly coupled HPRC architectures e g the Convey hybrid core computer reconfigurably networked HPRC architectures e g the QPACE system and standalone HPRC architectures such as EPFL s CONFETTI system The Part on Tools

will focus on high level programming approaches for HPRC with chapters on C to Gate tools such as Impulse C AutoESL Handel C MORA C Graphical tools MATLAB Simulink NI LabVIEW Domain specific languages languages for heterogeneous computing for example OpenCL Microsoft's Kiwi and Alchemy projects The part on Applications will present case from several application domains where HPRC has been used successfully such as Bioinformatics and Computational Biology Financial Computing Stencil computations Information retrieval Lattice QCD Astrophysics simulations Weather and climate modeling

Parallel Processing for Artificial Intelligence 1 L.N. Kanal,H. Kitano,V. Kumar,C.B. Suttner,2014-06-28 Parallel processing for AI problems is of great current interest because of its potential for alleviating the computational demands of AI procedures The articles in this book consider parallel processing for problems in several areas of artificial intelligence image processing knowledge representation in semantic networks production rules mechanization of logic constraint satisfaction parsing of natural language data filtering and data mining The publication is divided into six sections The first addresses parallel computing for processing and understanding images The second discusses parallel processing for semantic networks which are widely used means for representing knowledge methods which enable efficient and flexible processing of semantic networks are expected to have high utility for building large scale knowledge based systems The third section explores the automatic parallel execution of production systems which are used extensively in building rule based expert systems systems containing large numbers of rules are slow to execute and can significantly benefit from automatic parallel execution The exploitation of parallelism for the mechanization of logic is dealt with in the fourth section While sequential control aspects pose problems for the parallelization of production systems logic has a purely declarative interpretation which does not demand a particular evaluation strategy In this area therefore very large search spaces provide significant potential for parallelism In particular this is true for automated theorem proving The fifth section considers the problem of constraint satisfaction which is a useful abstraction of a number of important problems in AI and other fields of computer science It also discusses the technique of consistent labeling as a preprocessing step in the constraint satisfaction problem Section VI consists of two articles each on a different important topic The first discusses parallel formulation for the Tree Adjoining Grammar TAG which is a powerful formalism for describing natural languages The second examines the suitability of a parallel programming paradigm called Linda for solving problems in artificial intelligence Each of the areas discussed in the book holds many open problems but it is believed that parallel processing will form a key ingredient in achieving at least partial solutions It is hoped that the contributions sourced from experts around the world will inspire readers to take on these challenging areas of inquiry
