Future Transitions in the Mining Industry Tuija Mononen,Lasse Peltonen,2025-10-09 This volume focuses on mining and the challenges for this industry as it transitions and evolves as the demand for products and responsible and sustainable mining ever increases Mining is a prerequisite for modern society yet the industry is often criticized for having many negative environmental and social impacts The volume explores the challenges controversies and responses that arise when a society is reliant on the products of mining to maintain their standard of living yet are simultaneously calling for the

implementation of sustainable practices with many communities also being resistant to mining activities taking place in their own location. Many transitions which present a solution to one problem can often lead to new issues and developments elsewhere. For example, the electrification of vehicles will help to mitigate climate change but this will simultaneously increase the demand for minerals required for batteries. The acceptance of or resistance to mining varies from location to location and across different scales with key factors relating to the social and environmental impacts and the economic benefits. One common tension revolves around whether local communities really benefit economically from mining activities and even if they do they could now be negatively impacted by the digitization of the industry which will naturally lead to a reduction in the number of jobs. This volume explains how transitions of these types are inextricably linked by demand, acceptance and the perception of benefits and that as the industry evolves more tensions and controversies will develop. This book will be of great interest to scholars and students of mining and the extractive industries, transitions and sustainable development as well as to professionals working in natural resource management.

Urban Sustainability Transitions
Niki Frantzeskaki, Vanesa Castán Broto, Lars Coenen, Derk Loorbach, 2017-06-14
The world's population is currently undergoing a significant transition towards urbanisation with the UN expecting that 70% of people globally will live in cities by 2050. Urbanisation has multiple political, cultural, environmental and economic dimensions that profoundly influence social development and innovation. This fundamental long term transformation will involve the realignment of urban society's technologies and infrastructures, culture and lifestyles as well as governance and institutional frameworks. Such structural/systemic realignments can be referred to as urban sustainability transitions. Fundamental and structural changes in urban systems through which persistent societal challenges are addressed, such as shifts towards urban farming, renewable decentralised energy systems and social economies. This book provides new insights into how sustainability transitions unfold in different types of cities across the world and explores possible strategies for governing urban transitions, emphasising the co-evolution of material and institutional transformations in socio-technical and socio-ecological systems. With case studies of mega cities such as Seoul, Tokyo, New York and Adelaide, medium sized cities such as Copenhagen, Cape Town and Portland and non-metropolitan cities such as Freiburg, Ghent and Brighton, the book provides an opportunity to reflect upon the comparability and transferability of theoretical/conceptual constructs and governance approaches across geographical contexts. *Urban Sustainability Transitions* is key reading for students and scholars working

Gated Bayesian Networks Marcus Bendtsen,2017-06-08 Bayesian networks have grown to become a dominant type of model within the domain of probabilistic graphical models Not only do they empower users with a graphical means for describing the relationships among random variables but they also allow for potentially fewer parameters to estimate and enable more efficient inference The random variables and the relationships among them decide the structure of the directed acyclic graph that represents the Bayesian network It is the stasis over time of these two components that we question in this thesis By introducing a new type of probabilistic graphical model which we call gated Bayesian networks we allow for the variables that we include in our model and the relationships among them to change overtime We introduce algorithms that can learn gated Bayesian networks that use different variables at different times required due to the process which we are modelling going through distinct phases We evaluate the efficacy of these algorithms within the domain of algorithmic trading showing how the learnt gated Bayesian networks can improve upon a passive approach to trading We also introduce

algorithms that detect changes in the relationships among the random variables allowing us to create a model that consists of several Bayesian networks thereby revealing changes and the structure by which these changes occur The resulting models can be used to detect the currently most appropriate Bayesian network and we show their use in real world examples from both the domain of sports analytics and finance

Family Wealth Transition Planning Bonnie Brown Hartley, Gwendolyn Griffith, 2010-05-21

Managing the transition of family wealth from generation to generation is a daunting task. Families with businesses require inheritance plans that are even more complicated because wealth and worth are often intricately woven into the business. And many transition plans focus only on financial capital and ignore a family's less tangible assets. Other plans detail the intrinsic elements of an inheritance without satisfying the practical issues. In *Family Wealth Transition Planning*, Bonnie Brown Hartley and Gwendolyn Griffith guide advisers to families with small businesses through the intricate process of preparing and transferring wealth to heirs. The authors take a holistic view of transition planning, focusing on the assets that fall under the umbrella of financial capital as well as the other key sources of family wealth: human and social capital. Advisers learn the essentials to achieving successful wealth continuity: Healthy family relationships, Responsible stewardship of wealth in all forms, Creation and preservation of the family legacy. Throughout the book, three fictionalized business families based on Hartley's experience as an adviser tell their personal stories as they navigate the estate planning process. In this way, Hartley and Griffith demonstrate how to develop wealth transition plans that are wide enough in scope to encompass all forms of wealth yet customized to manage each family's different needs.
