## **Red Colobus Monkey:**

**The Red Colobus Monkeys** Thomas T. Struhsaker, 2010-04 This unique research level text is suitable for graduate level students as well as professional researchers in primatology behavioral ecology anthropology and conservation biology Book Jacket

**Chimpanzee and Red Colobus** Craig Britton Stanford, 1998 Our closest living relatives the chimpanzees are familiar enough bright and ornery and promiscuous But they also kill and eat their kin in this case the red colobus monkey which may say something about primate even hominid evolution This book the first long term field study of a predator prey relationship involving two wild primates documents a six year investigation into how the risk of predation molds primate society Taking us to Gombe National Park in Tanzania a place made famous by Jane Goodall's studies the book offers a close look at how predation by wild chimpanzees observable in the park as nowhere else has influenced the behavior ecology and demography of a population of red colobus monkeys As he explores the effects of chimpanzees hunting Craig Stanford also asks why these creatures prey on the red colobus Because chimpanzees are often used as models of how early humans may have lived Stanford's findings offer insight into the possible role of early hominids as predators a little understood aspect of human evolution The first book length study in a newly emerging genre of primate field study **Chimpanzee and Red Colobus** expands our understanding of not just these two primate societies but also the evolutionary ecology of predators and prey in general

**The Red Colobus Monkey** Thomas T. Struhsaker, 1975 *The Red Colobus Monkeys* Thomas T. Struhsaker, 2010-04-01 Based on field studies spanning nearly 40 years this reference book summarizes and integrates past research with new and previously unpublished information on the behavioral ecology of Africa's red colobus monkeys from study sites as diverse as Senegal Uganda and Zanzibar It provides an unparalleled compilation of information on taxonomy genetics vocalizations demography social organization dispersal social behavior reproduction mortality factors diet ranging patterns interspecific relations and conservation Social relationships in red colobus are less rigidly structured than in other African monkeys resulting in considerable variation in social organization and group composition both within and between taxa This provides a unique opportunity to examine the extent to which social variables correlate with differences in habitat quality demography and predation by chimpanzees and humans Unfortunately at least half of the 18 taxa of red colobus are now threatened with extinction Conservation problems are described causal factors identified and solutions proposed This volume is intended not only to serve as a reference book but to stimulate and guide future long term research and to encourage effective conservation action

**Feeding and Population Ecology of Red Colobus Monkey Korup NP Cameroon** Usongo Leonard, 2016-12-15 **The Impact of Habitat Quality on Female Red Colobus Monkey (*Procolobus rufomitratus*) Reproduction**, 2012 **Feeding and Ranging Behaviour of the Red Colobus Monkey** T. H. Clutton-Brock, 1972 **International Wildlife Encyclopedia** Maurice Burton, Robert Burton, 2002 This twenty two volume set presents the appearance and behavior of thousands of species of animals along with species population and

prospects for survival in a arranged alphabetically and easy to read format      *The Chimpanzees of the Tai Forest* Christophe Boesch, Hedwige Boesch-Achermann, 2000 The chimpanzees are the closest living evolutionary relatives to our own species *Homo sapiens*. As such they have long exerted a fascination over those with an interest in human evolution and what makes humans unique. Christophe Boesch and Hedwige Boesch-Achermann undertook an incredible observational study of a group of wild chimpanzees of the Tai forest in Cote D'Ivoire spending some fifteen years in the West African jungle with them. This fascinating book is the result of these years of painstaking research among the chimps. Chimpanzee behavior is documented here in all its impressive diversity and variety. Aggression, territoriality, social structure and relationships, reproductive strategies, hunting, tool use: each of these is given its own chapter along with topics such as chimp intelligence, life histories and demography. The authors take care to place their observations within the broader context of research in behavioral ecology and to compare and contrast their findings with other important work on chimpanzee groups such as that by Jane Goodall. The book concludes with a summary chapter relating the chimpanzee findings to our understanding of human evolution. Combining careful scientific observation with a store of entertaining anecdotes, this is a lively and readable book. It also succeeds in shedding light on some of the central questions around the evolutionary relationships between the primates and in particular the affinity between chimpanzees and humans. This is a major contribution to the study of the great apes and a significant addition to debates about human ape evolution. It has all the makings of a classic monograph.      **Primate**

**Males** Peter M. Kappeler, 2000-05-04 The size and composition of primate groups varies tremendously across species within species and within groups over time. The most variable quantity is the number of adult males. In some groups, single males can monopolize access to several females, whereas reproduction is shared among several males in other groups. This variation lies at the heart of understanding adaptive variation among social systems. Whether groups contain single or multiple males has important consequences for reproductive strategies of both sexes and also shapes these animals' morphology and behaviour. Written by leading authorities, this book provides an extensive overview of variation in group composition across all major primate taxa, using up-to-date reviews, case studies, evolutionary theory and theoretical models, setting primates into context with birds and other mammals. It will become a firm favorite with all those interested in the behavioural ecology of primates.

**Road Mortality of the Zanzibar Red Colobus Monkey (*Procolobus Kirkii*)** Erin L. Bohensky, 1999      **Primates of the World** Jean-Jacques Petter, François Desbordes, 2013-08-25 The essential illustrated guide to the world's primates. This stunningly illustrated guide to the world's primates covers nearly 300 species, from the feather-light and solitary pygmy mouse lemurs of Madagascar among the smallest primates known to exist to the regal mountain gorillas of Africa. Organized by region and spanning every family of primates on Earth, the book features 72 splendid color plates, facing page descriptions of key features of each family, and 86 color distribution maps. *Primates of the World* also includes concise introductory chapters that discuss the latest findings on primate origins and evolution, behavior and adaptations, and classification, making

it the most comprehensive and up to date primate guide available Covers nearly 300 species and every family of primates worldwide Features 72 color plates the finest illustrations of primates ever produced Includes facing page descriptions for each family and 86 color distribution maps The most comprehensive and up to date guide to the world s primates The Natural History of Primates Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century **The Zanzibar Red Colobus Monkey (*Procolobus Kirkii*)** Kirstin Samantha Siex, 1995 Molecular Systematics of Red Colobus Monkeys (*Procolobus (Piliocolobus)*) Nelson Ting, 2008 *Socioecology of the Red Colobus Monkey in the Gambia with Particular Reference to Female-male Differences and Transfer Patterns* Erica Dawn Starin, 1991 **The Encyclopedia of Animals**, 2004 This lavishly illustrated trade reference to mammals birds reptiles amphibians fishes and invertebrates features hundreds of glorious photos masterful illustrations and informative maps *Mammals of Africa* Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa s mammals With 1 160 species and 16 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes some 660 colour illustrations by Jonathan Kingdon and his many drawings highlight details of morphology and behaviour of the species concerned Diagrams schematic details and line drawings of skulls and jaws are by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Extensive references alert readers to more detailed information Volume I Introductory Chapters and
