Redesigning Human Systems:

Redesigning Human Systems Mumford, Enid, 2002-07-01 Organizational change is becoming increasingly complex challenging and difficult to handle as technology advances And there is a need to discuss how it can be both more effectively managed by large and small organizations while at the same time the strategies for changes are based on ethical notions of democracy and participation Redesigning Human Systems assists those interested in and responsible for the management of major change within organizations and provides the theories and values that should be adhered to in order to achieve that change successfully and effectively Redesigning Human Systems Enid Mumford, 2003-01-01 Assisting individuals interested in and responsible for the management of major change within organizations this book provides the theories and values that should be adhered to in order to achieve change successfully and effectively The complexities of the change process are explained and practical guidance for those trying to mold change so that it can offer a route to a better quality of life is provided This book also examines what has been called the sociotechnical philosophy of taking the needs of people into account when new work systems are being introduced Designing Human Systems Steve Hickey, Holly Matthies, Enid Mumford, 2006-06-03 Enid Mumford 1924 2006 was a pioneer in the sociotechnical design of computer systems Prof Mumford s work successfully investigated the introduction and implementation of computer systems by large corporations and governments Mumford s ETHICS approach to software development emphasizes user participation thus avoiding many of the problems of introducing new systems It takes a holistic view of organizations unifying both social and technological solutions This updated edition of Mumford s book Designing Human Systems describes how modern agile programming techniques complement the ETHICS method Together the two methods cover both user and developer issues This integrated approach offers an improved methodology for successful software development projects **Critical Systems Thinking and the Management of Complexity** Michael C. Jackson, 2019-04-08 From the winner of the INCOSE Pioneer Award 2022 The world has become increasingly networked and unpredictable Decision makers at all levels are required to manage the consequences of complexity every day They must deal with problems that arise unexpectedly generate uncertainty are characterised by interconnectivity and spread across traditional boundaries Simple solutions to complex problems are usually inadequate and risk exacerbating the original issues Leaders of international bodies such as the UN OECD UNESCO and WHO and of major business public sector charitable and professional organizations have all declared that systems thinking is an essential leadership skill for managing the complexity of the economic social and environmental issues that confront decision makers Systems thinking must be implemented more generally and on a wider scale to address these issues An evaluation of different systems methodologies suggests that they concentrate on different aspects of complexity To be in the best position to deal with complexity decision makers must understand the strengths and weaknesses of the various approaches and learn how to employ them in combination This is called critical systems thinking Making use of over 25 case

studies the book offers an account of the development of systems thinking and of major efforts to apply the approach in real world interventions Further it encourages the widespread use of critical systems practice as a means of ensuring responsible leadership in a complex world The INCOSE Pioneer Award is presented to someone who by their achievements in the engineering of systems has contributed uniquely to major products or outcomes enhancing society or meeting its needs The criteria may apply to a single outstanding outcome or a lifetime of significant achievements in effecting successful systems Comments on a previous version of the book Russ Ackoff the book is the best overview of the field I have seen JP van Gigh Jackson does a masterful job The book is lucid well written and eminently readable Professional Manager Journal of the Chartered Management Institute Provides an excellent guide and introduction to systems thinking for students of management *Foundations of Informing Science: 1999-2008* T. Grandon Gill, Eli Cohen, 2009 [Walking to New Orleans](#) Robert R. N. Ross, Deanne E. B. Ross, 2008-09-22 Two and a half years after the devastation of Hurricanes Katrina and Rita New Orleans and south Louisiana continue to struggle in an unsettled gumbo of environmental social and rebuilding chaos Citizens await the fruition of four successive recovery and reconstruction planning processes and the realization of essential infrastructure repairs Repopulation in Orleans Parish has slowed considerably the parish remains at best two thirds of its former size thousands of former residents who wish to return face barriers of many kinds Heroic efforts at rebuilding have occurred through the efforts of individual neighborhood associations and voluntary associations who have attempted to address serious losses in affordable housing and health care services Walking to New Orleans traces how a dominant but paradoxical model of the relation between the human and natural worlds in Western culture has informed many environmental and engineering dilemmas and has contributed to the history of social inequities and injustice that anteceded the disasters of the hurricanes and subsequent flooding It proposes a model for collaborative recovery that links principles of ethics and engineering in which citizens become active ongoing participants in the process of the reconstruction and redesign of their unique locus of habitation Equally important it gives voice to the citizens and associations who are desperately working to rebuild their homes and lives both in urban New Orleans and in the villages of coastal Louisiana

and software producers are being obliged to adopt new strategies and to make a large number of products available on the market in response to a variety of different needs. As a result of the multiplicity of choice available, the design of an office system which corresponds precisely to user needs is becoming an increasingly complex task. With exactly this in mind, the Commission as early as 1985 invited submissions of projects aiming at the development of such adequate tools in its Call for Proposals for the ESPRIT Programme in order to assist companies in the design of their office systems. This topic was recognised as being of strategic importance considering the low level of penetration of Information Technology in European enterprises compared to the United States and Japan. Following this strategy, the project TODOS was selected and launched. This project has successfully developed tools and methods for the definition of the functional specification of the office system as well as the system architecture and user interface results which can be of great interest for the IT community at large.

Cybersecurity Awareness Jerry Andriessen, Thomas Schaberreiter, Alexandros Papanikolaou, Juha Rönning, 2022-06-30. This contributed volume tells the story of the establishment of a cybersecurity awareness framework for organizations and how it was piloted in two public sector municipal contexts. It presents a clear picture of cybersecurity issues in municipalities and proposes a socio-technical solution for creating cybersecurity awareness: how to build the solution and what the impact is on the municipal contexts. The 9 chapters for this book also provide information regarding the design, the deployment and the evaluation of the technology. This book builds on the success of the European Horizon 2020 research and innovation project CS AWARE. The research proposes the first cybersecurity situational awareness solution for local public administrations based on an analysis of the context, provides automatic incident detection and visualization and enables information exchange with relevant national and EU level authorities involved in legislation and network security. Cybersecurity is one of the most challenging security problems for commercial companies, NGOs, governmental institutions as well as individuals. Reaching beyond the technology-focused boundaries of classical information technology, IT security, cybersecurity includes organizational and behavioral aspects of IT systems and that needs to comply to legal and regulatory framework for cybersecurity. While large corporations might have the resources to follow those developments and bring their IT infrastructure and services in line with the requirements, the burden for smaller organizations like local public administrations will be substantial and the required resources might not be available. New and innovative solutions that would help local public administration to ease the burden of being in line with cybersecurity requirements are needed. This book targets researchers working in cybersecurity, computer scientists, social scientists and advanced level students studying computer science and other related disciplines. Cybersecurity professionals as well as professionals working in local government contexts including policy makers, communication experts and system administrators will also benefit from this book.
